MONTHLY LABOR REVIEW

VOL. X—NO. 1 10-27-20 WASHINGTON

JANUARY, 1920

The International Labor Conference.¹

By MRS. V. B. TURNER.

THE first world labor conference was in session in Washington from October 29 to November 29, 1919. Called in accordance with the provisions of the labor convention in the Peace Treaty, and meeting in the Pan American Building, which is dedicated to the cause of Pan American peace and progress, the conference had a definite purpose—the adoption of measures looking toward the promotion of industrial peace, without which no national peace is really possible.

In welcoming the delegates Hon. William B. Wilson, United States Secretary of Labor, emphasized the fact that since the days of "Moses, as the spokesman, the angel, the walking delegate, of the brick makers of Israel, until the present time, the relationship that should exist between employers and employees, the best means of securing the acme of production while safeguarding those who toil, and the equitable distribution of that which has been produced, have been ever present questions." The proper solution of these problems, upon which the progress of the world depends, he continued, must include the spiritual nature of man as well as his material comfort, and can not be arrived at hastily. Universal justice and harmony are not to be achieved overnight. The slow process of experimentation must be followed, in which the bad must be rejected, the good retained, and all so adapted that nothing could occur that would "destroy the basis of the structure of modern civilization, the democratic institutions that exist in numerous nations of the world; for after all, of what avail the plow, the sail, or land or light or life, if freedom fail?"

¹This article was prepared for insertion in the December issue of the MONTHLY LABOR REVIEW, but the conference had not adjourned when the December issue went to press, and it was thought advisable to hold the article for the present number. In the meantime a copy was given to the conference, which had it mimeographed for general circulation.

The full text of the draft conventions and recommendations adopted by the International Conference will be published in the February issue of the MONTHLY LABOR REVIEW.

Preliminary to the permanent organization of the conference the report of the international organizing committee was presented for adoption. This committee, appointed to assist the Government of the United States of America in making necessary arrangements for the International Labor Conference, consisted of seven members, appointed by the United States of America, Great Britain, France, Italy, Japan, Belgium, and Switzerland, as follows:

United States of America: Dr. J. T. Shotwell (provisionally), professor at Columbia University.

Great Britain: Sir Malcolm Delevingne, K. C. B., Assistant Under-Secretary of State, Home Office.

France: Mr. Arthur Fontaine, Councillor of State, Director of Labor.

Italy: Mr. di Palma Castiglione, Inspector of Emigration.

Japan: Dr. M. Oka, formerly Director of Commercial and Industrial Affairs at the Ministry of Agriculture and Commerce.

Belgium: Mr. E. Mahaim, professor at Liège University.

Switzerland: Mr. W. E. Rappard (provisionally), professor at Geneva University.

Mr. Arthur Fontaine, Director of the Labor Department of the French Ministry of Labor, had been elected chairman of the committee, and Mr. H. B. Butler, Assistant Secretary of the British Ministry of Labor, had been appointed secretary. The agenda for discussion and action by the conference, as set forth in the annex to the labor convention included in the Peace Treaty, embraced the following subjects:

1. Application of the principle of the 8-hour day or of the 48-hour week.
2. Question of preventing or providing against unemployment.
3. Women's employment:
 - (a) Before and after childbirth, including the question of maternity benefit.
 - (b) During the night.
 - (c) In unhealthy processes.
4. Employment of children:
 - (a) Minimum age of employment.
 - (b) During the night.
 - (c) In unhealthy processes.
5. Extension and application of the international convention adopted at Bern in 1906, on the prohibition of night work for women employed in industry, and the prohibition of the use of white phosphorus in the manufacture of matches.

The committee's report pointed out that the conference would also have to deal (1) with the appointment of the governing body of the International Labor Office, and (2) the approval of rules of procedure.

Through a questionnaire sent out to the different countries, information was secured regarding existing legislation and practice in respect to the various subjects enumerated in the agenda, together with proposals from the respective Governments as to how these

subjects should be dealt with in the conference. Upon the information thus obtained the organizing committee based the suggestions for draft conventions and recommendations which it submitted to the conference, in the form of four reports, as a basis of discussion.

The Make-Up of the Conference.

According to the terms of the labor convention in the Peace Treaty each State adhering to the convention is entitled to four delegates in the International Labor Conference, two of these delegates to be appointed by the Government, one by the employers' organizations, and one by the workers' organizations. "Each delegate may be accompanied by advisers, who shall not exceed two in number for each item on the agenda of the meeting. When questions specially affecting women are to be considered by the conference, one at least of the advisers should be a woman." The non-Government delegates and advisers are to be chosen from the most representative employers' and workers' organizations, if such exist, in their respective countries.

While all the delegations at the conference were not as complete as possible under the labor convention, a number of the countries had full representation, chief among which were Belgium, Canada, Czecho-Slovakia, Denmark, France, Great Britain, Italy, Japan, Netherlands, Norway, Poland, Spain, and Sweden. Fourteen of the 40 countries represented sent only Government delegates, for reasons temporary in their nature, as explained to the conference.

Through the failure of the United States Senate to ratify the Peace Treaty, the United States was not entitled to official representation in the labor conference except through the courtesy of the visiting delegates, and this courtesy was promptly extended. In a motion introduced by Baron Mayor des Planches, Government delegate from Italy, and unanimously adopted by the conference, the United States employers and workers were requested to send delegates. Mr. Samuel Gompers was appointed to represent labor. The employers did not send a representative. Delegates from the United States, however, did not have the privilege of voting.

On the question of the admission of the German and Austrian delegates the organizing committee recommended "that in anticipation of their admission to the League of Nations and in view of their expressed willingness to cooperate in the work of the labor organization, Germany and Austria are hereby admitted to membership in the international labor organization with the same rights and obligations possessed by the other members of the labor organization,

according to the terms of the treaties of peace signed at Versailles on the 28th day of June, 1919, and at St. Germain on the 10th day of September, 1919."

Opinions on such admission, unfavorable and favorable, were freely expressed. It was argued, on the one hand, that the war history of the countries in question precluded their joining with the Allied peoples on the same basis; while, on the other hand, it was pointed out that if legislation were adopted enforcing the 8-hour day or the 48-hour week, Germany and Austria could not possibly be expected to apply such legislation if they had not been invited to join in the proceedings. Again, it was suggested that if admitted to the labor organization there would also be lacking opportunity for these countries to injure industrial interests of other countries. Economic reasons eventually prevailed and the recommendation was adopted. Owing, however, to a delay in obtaining passage and the unexpected brevity of the conference the German and Austrian delegates did not come to the United States.

It is interesting to note that the delegate representing the French employers voted against the recommendation and the delegate representing Belgian employers abstained from voting, while the Government and labor delegates from those nations voted in favor of it.

Delegates were present from the following 40 countries: Argentina, Belgium, Bolivia, Brazil, Canada, Chile, China, Columbia, Cuba, Czecho-Slovakia, Denmark, Ecuador, Finland, France, Great Britain, Greece, Guatemala, Haiti, India, Italy, Japan, Netherlands, Nicaragua, Norway, Panama, Paraguay, Persia, Peru, Poland, Portugal, Roumania, Siam, Salvador, South Africa, Spain, Sweden, Switzerland, Uruguay, and Venezuela, and Serbs, Croats, and Slovenes. Among these delegates were 19 women, who represented their various countries in the capacity of advisers. On several occasions, as substitutes for regular delegates, they addressed the conference on subjects pertaining to the employment of women and children.

Organization of the Conference.

Permanent organization was not effected until October 31, 1919, when Hon. William B. Wilson, United States Secretary of Labor, was made president of the conference. Secretary Wilson voiced his appreciation of the honor conferred upon the American Government and the American people through this courtesy to him, and re-emphasized a thought to which he had given expression in his opening address, as follows:

Mankind has had two great economic problems to solve. The first of these problems was the problem of production, the means of producing suf-

ficient by which the material comfort of the people of the world might be secured. The inventive genius of man has solved that question to a very great extent. There is no longer any fear that the people of the world can not produce sufficient to provide for the material comfort of all that may be born into it, provided there is ample opportunity to work under proper safeguards, and that the things that are produced are equitably and justly distributed.

If we can solve the question of giving to all the people an opportunity for employment under proper safeguards and secure the equitable distribution of that which is produced we will have achieved the greatest material ideals that have been conceived in the human mind. To the solution of these problems you are bringing your wisdom and your experience, but the problems will not be solved as the result of the brilliant conceptions of any one mind. The problems of production and the other problems that man has solved have been solved by the process of adding one idea to another, building the structure one stone upon another until it is completed. That is the task now before the International Labor Conference—the task of finding the material and fitting it into its proper place in the structure.

Right Hon. G. N. Barnes, member of the British War Cabinet, for the Government representatives, Mr. Jules Carlier (Belgium), representing the employers' group, and Mr. Léon Jouhaux, secretary of the General Confederation of Labor, France, representing the workers' delegates, were elected vice presidents, while Mr. H. B. Butler was made secretary general. A committee of selection (or steering committee) was named from the three groups as follows:

Government Delegates.

Sir Malcolm Delevingne, Great Britain; Dr. Felipe Espil, Argentina; Mr. Arthur Fontaine, France; Mr. E. Mahaim, Belgium; Dr. S. Neumann, Denmark; Mr. M. Oka, Japan; Mr. di Palma Castiglione, Italy; Dr. Adolfo Posada, Spain; Hon. Gideon D. Robertson, Canada; Mr. Charles Spinka, Czecho-Slovakia; and Dr. Hans Sulzer, Switzerland.

Employers' Delegates.

Mr. Francis X. Hodacz, Czecho-Slovakia; Mr. Louis Guérin, France; Mr. D. S. Marjoribanks, Great Britain; Mr. Ferdinando Quartieri, Italy; Mr. Sanji Muto, Japan; and Mr. Alfonso Sala, Spain.

Workers' Delegates.

Mr. Corneille Mertens, Belgium; Mr. Léon Jouhaux, France; Mr. G. H. Stuart-Bunning, Great Britain; Mr. J. Oudegeest, Netherlands; Mr. Francisco L. Caballero, Spain; Mr. H. Lindqvist, Sweden.

Committees to confer and report on various parts of the agenda, a committee on standing orders, and one on admissions were nom-

inated by this committee and afterwards approved by the conference.

Program of the Conference.

The 8-Hour Day.

The question of the 8-hour day or 48-hour week, the first item of the agenda, was presented to the conference by the Hon. G. N. Barnes, Government representative from Great Britain, who moved "that the draft convention on the 48-hour week prepared by the organizing committee be adopted by the conference as the basis for discussion, but that the question of its application to the tropical and other countries referred to in the third paragraph of article 405 of the treaty be referred in the first instance for consideration by the special committee which shall report to the conference."

The organizing committee suggested the principle of the 48-hour week instead of the 8-hour day for two reasons:

1. Greater elasticity is possible in the arrangement of the hours of work and the adoption of a half holiday, or even a whole holiday, on Saturday or some other day of the week, by enabling a longer period than 8 hours to be worked on other days;

2. The weekly day of rest is possible through the 48-hour week, whereas the principle of the 8-hour day by itself would not necessarily help to secure this rest period.

In his argument for the 48-hour week Mr. Barnes emphasized the fact that while increased production must be had, it could be secured only through a better organization of industry, by humanizing the conditions of labor. Long hours of labor would not, in his opinion, contribute to that end. The basic 8-hour day would not give the leisure the workers desired and needed. The recommendations should be sufficiently elastic to meet the requirements of special industries and to provide for unusual emergencies such as might arise due to fire, flood, etc. To illustrate this point he said:

It is true that an 8-hour day, if spread evenly over a week, makes a 48-hour week. But there is no reason why it should be spread evenly over every day in the week if industries can be better served otherwise. For instance, there is laundry work, which as I know and all of you know has its busy spell in certain days of the week, and I should provide for it accordingly. Again, there are some countries in which Saturday afternoon work is unknown. I should make a provision for that by a longer working day in the days preceding Saturday; and therefore I put the proposition to you in the form of a 48-hour week instead of an 8-hour day. I am inclined to think if that be adopted, we shall, to some extent, avoid or prevent troubles arising from overtime.

The point was also made that it would be difficult to bring countries in which industry is not highly organized to the 8-hour level.

The employers objected to an immediate vote upon this subject and later through Messrs. D. S. Marjoribanks (Great Britain) and Jules Carlier (Belgium) presented a substitute plan, the draft of which was not signed by the Dutch, Italian, and Canadian employer representatives.

While accepting the principle of the 8-hour day or 48-hour week, they would subject the rule to certain modifications, including those relating to maintenance and increase of output, existing agreements, normal distribution, and reconstruction of industry in the devastated areas, and the following specific conditions:

Special conditions have to be considered in regard to intermittent work and with regard to workers engaged either in special occupations or in work which is done after working hours.

Special consideration must be given to work executed by order of an official authority, in the interests of national defense, to maintain public service, and in connection with urgent work the execution of which is imperative either to prevent or to repair accidents which might stop work.

The limit of 48 hours per week or 8 hours per day may be exceeded and extended to a maximum of an average week of 56 hours in those industries where continuous processes are carried out by successive shifts.

Industries subject to changes of weather or which are, because of unforeseen circumstances, subject to periods of enforced idleness will have special regulations enabling them to make good for the loss of time arising from such enforced idleness. And with suitable control this will apply also in cases of idleness arising from "force majeure."

Where the character or nature of the work demands, the legislations or agreements made between employers and workpeople may extend the duration of a working day beyond 8 hours, it being understood that the authorized maximum of additional hours per year should not exceed 300.

The bureau of international labor may, in exceptional cases, and pending the restoration of normal conditions of production, call for international agreements to make further exceptions in favor of certain industries whose products are indispensable for food supply and for transport by land and water. The duration of these exceptions must be strictly limited, and in no case will they exceed five years. /

Energetic opposition to the employers' plan was voiced by the workers' delegates. Mr. Léon Jouhaux (France) insisted that the workers must have both the 8-hour day and the 48-hour week and that these should be the maximum working periods, and he introduced an amendment to Mr. Barnes' motion to that effect. Mr. Gompers (United States), on being given the privilege of the floor, pointed out that according to this plan the working week might be increased to 56 hours, and not only that, the authorized maximum of additional hours per year might reach 300 and still further exceptions be made in exceptional cases which might impose additional hours. The history of industry, he asserted, shows that "there is

more produced by the workers, everything else being equal, in an 8-hour day than in a 10 or 12 hour day."

In the lengthy general discussion of the motion which followed, the usual arguments for and against the application of the principle of the 8-hour day were made and several amendments offered. Those opposed to the application of this principle emphasized the fact that increased production is the greatest present necessity. War debts must be paid and foreign competition and immediate economic needs met. Shorter hours would mean less production, and the French employers' delegate said that the introduction of the 8-hour day in France had resulted in a 15 to 20 per cent reduction in production. If production should be cut down, the workers would be the first to suffer. It was further asserted that this limitation of working hours would not be practicable in seasonal industries such as agriculture and lumbering, in continuous industries, and others; that it would be the deathblow of small industries and would prevent starting new ones; and that in countries like Canada and the United States, where the labor question is a separate one in each Province and State, difficulties of agreement would result from the different interests of the different national political divisions.

In reply to these arguments it was maintained that the question of increase in production was not overlooked in the limitation of the length of the working time. Experience gained in the war and scientific investigation had demonstrated the fact that the longer the hours of work the less the production. As regards the application of shorter working hours in the continuous industries the difficulty of granting a weekly day of rest could be met by an increase of shifts, and these could be easily manned for the reason that in the electrical industries only a small number of workers are required for the necessary fourth shift and in the chemical and steel industries the labor required is largely unskilled labor which is readily obtained. A delegate from Czecho-Slovakia pointed out that the National Polish Assembly wished the same law applied to agriculture as governed in other industries, because the attraction of town life and shorter hours induced the laborers to leave the farms. A law of this character, he said, had been in force in Poland, a newly created State whose economic questions were hard to solve, for nearly a year and no serious objections to it had been made. The 8-hour day in some form is moreover an accomplished fact in many countries. To question its adoption, remarked the Government delegate from Netherlands, would be like trying to rediscover America. The social and ethical importance of the 8-hour day and the 48-hour week was especially emphasized. The worker must not only "be protected against

undue fatigue, but also must be insured reasonable leisure and opportunities for recreation and social life."

The motion, with all the amendments and suggested changes, was finally referred to a committee composed of 15 delegates, 5 from each section, for consideration. The final report upon the subject apart from its application in tropical countries was made by Mr. Arthur Fontaine, Director of the Labor Department of the French Ministry of Labor, in the form of a draft convention.

In general the convention provides an 8-hour day and a 48-hour week applicable in "all industrial undertakings public or private, and to all branches thereof of whatsoever kind, other than undertakings in which only members of the family are employed."

A recognition of the impossibility of a rigid application of this principle, however, resulted in the adoption of a number of important and far-reaching exceptions:

The provisions of the convention shall not apply to persons holding positions of supervision or management, or employed in a confidential capacity.

Where by law, custom, or agreement between employers' and workers' organizations (or where no such organizations exist, between the employers' and workers' representatives) the hours of work on one or more days of the week are less than eight, the limit of eight hours may be exceeded on the remaining days of the week by the sanction of the competent authority, or by agreement between such organizations or representatives: *Provided, however,* That in no case under the provisions of this paragraph shall the daily limit of eight hours be exceeded by more than one hour.

Where persons are employed in shifts it shall be permissible to employ persons in excess of 8 hours in any one day and 48 hours in any one week, if the average number of hours over a period of three weeks or less does not exceed 8 hours per day, and 48 per week.

The limit of the hours set by the convention may be exceeded "in the case of accident, actual or threatened, of urgent work to be done to machinery or plant, or of 'force majeure,' but only when necessary to avoid serious interference with the regular working of the undertaking." In continuous processes, also, where the work is done by a succession of shifts, the working hours may be extended, but not to exceed 56 in the week on the average. Limitation of hours shall not affect holidays. Agreements may be made in exceptional cases whereby the daily limit of work may be exceeded so long as the average weekly hours and the period covered by such arrangement do not exceed 48.

Commerce, agriculture, and shipping are not included in the 8-hour provision.

The rate of overtime is fixed at not less than time and a quarter. The convention is to be carried out by the posting of notices in the works or other suitable place, or "by such other method approved by

the Government," which state the conditions of employment fixed for the particular industry. It shall be an offense against the law not to observe the regulations posted. "The provisions of the convention may be suspended in any country by order of the Government, in the event of war or other emergency endangering the national safety." July 1, 1921, is the time set for carrying the terms of the convention into effect.

Mr. Crawford (workers' delegate from South Africa) made an earnest appeal for the deletion of the clause "other than undertakings in which only members of the family are employed, on the ground that such a change would tend to abolish 'sweating,'" but his motion was defeated.

The difficulties in the application of the 8-hour day and 48-hour week convention to countries in which "climatic conditions, the imperfect development of industrial organizations, or other special circumstances, make the industrial conditions substantially different," were set forth in the report of a subcommittee appointed to consider this particular phase of the subject, and headed by the Right Hon. G. N. Barnes (Great Britain).

The position of Japan presented the greatest problem. The report points out that only in the last few years has any rapid advance in the organization of industry in that country been made. Factory legislation applies only to women and children, and prescribes a working day of 13 hours as a maximum. In the case of male workers there is no regulation of hours. The restrictions of the factory act, moreover, apply only to factories employing more than 15 persons, and as much of the work is home work a large proportion of the operations are not subject to a limitation in hours. In the silk industry, for instance, which employs 900,000 workers, 53 per cent do not come under the scope of the law. Overtime to the extent of two or three hours a day is common. In the silk industry an additional hour of overtime is allowed on 120 days in the year.

In view of all these facts, the Japanese employer and Government delegates felt that Japan would be unable to adjust her industrial organization to meet the conditions of the 8-hour convention in the required time and requested modifications, at the same time signifying her intention "to accelerate the unqualified adoption of the rule in harmony with the general trend of the world."

Mr. Shichiro Muto, as substitute for the Japanese labor delegate, on the contrary urgently advised that Japan be treated precisely as the other adhering countries were treated, setting forth his views in a minority report. He protested in the name of Japanese labor and of public opinion in Japan that Japan is not a tropical country, but

climatically like the United States, Italy, and Spain; that Japanese industry has developed so wonderfully during the war that Japan is at least the industrial peer of Italy and Spain; that family industry is rapidly being transformed into the industry of modern factories. The 8-hour day, he maintained, is being adopted in an increasing number of factories, especially at Osaka, the Manchester of Japan. The opposition of Japanese employers to the introduction of the 8-hour day and the 48-hour week is due to their desire to retain their advantageous position, secured through exploitation of the workers, and the Government desires to protect the employers at the expense of the workers, who, because of limitations placed upon organizations, are unable to speak for themselves. In his opinion, the inefficiency charged against the Japanese worker is due to the prolonged hours of labor, which exhaust his energies.

The workers' delegates generally supported this position, urging that while Japan is taking her place in the world as a first-class power in every respect, she is gaining an advantage by pleading industrial inferiority, and an effort was made by Mr. Jouhaux (France) to reduce the time in which Japan might comply with the main convention to two years. Mr. Barnes maintained that if Japan were required to accept the full 8-hour convention she would be reducing her production 60 per cent; that she had not now the machinery to meet the modifications already agreed to and could not obtain it in less than three years. Mr. Jouhaux's motion was therefore defeated.

The committee recommended that Japan be given five years for applying the provisions of the main convention, and that in the meantime there be allowed certain modifications, which were enumerated in the text, and which in themselves will result in a considerable advance upon existing conditions. It suggested that coal mining be brought under the scope of the convention at once. The silk industry should have a 60-hour week, while all other industries "might be operated on a basis of a 9½-hour daily maximum, or a 57-hour week." The unit for the factory should be 10 persons instead of 15, as hitherto. The 48-hour week should also apply to minors under 15 years of age. A weekly rest period of 24 consecutive hours should be provided for, and overtime regulated in accordance with the provisions of the main convention.

As regards India the committee recommended a 60-hour week for those industries under the factory law, and urged that the Government modify its definition of a factory in such a way as to reduce the unit of 50 persons now recognized as constituting a factory. In view of the fact that China is still very largely an undeveloped country, that very little modern machinery is used, and that the

population is not industrialized, the Chinese delegate asked for an extension of time in the framing of any recommendation on the subject of Chinese industry. The committee therefore suggested that China adhere to the principle of factory legislation and submit for the consideration of the Chinese Government the possibility of adopting the 10-hour day or 60-hour week for adult workers, and an 8-hour day or 48-hour week for employed minors under 15 years of age. It also suggested that the weekly day of rest be granted, and that all factories employing more than 100 workers be included in the projected legislation.

The South African and tropical-American delegates stated that the main provisions of the convention as drafted would be applied in their countries. The only exceptions might be in the case of coal mining and sugar refining and a few other industries. Persia has no factories, and Siam little industry, so that no application of the 8-hour day need be made to them. Greece and Roumania have been so devastated by war that special consideration was necessary in their case, application of the convention being postponed to 1923 and 1924 in the case of certain Grecian industries, and to 1924 for industries in Roumania.

The draft convention on the 8-hour day was finally adopted by a substantial majority.

The following resolution on the 8-hour day passed by the International Congress of Working Women, which met in Washington just prior to the International Labor Conference, was submitted to the conference:

The first International Congress of Working Women requests the first International Congress of Labor of the League of Nations that an international convention establish:

- (1) For all workers a maximum 8-hour day and 44-hour week.
- (2) That the weekly rest period shall have an uninterrupted duration of at least one day and one-half.
- (3) That in continuous industries a minimum rest period of one half-hour shall be accorded in each 8-hour shift.

Unemployment.

The second question on the agenda of the conference, viz, that of preventing or providing against unemployment, was of such a complex nature that the committee of which Mr. Max Lazard (France) was chairman decided to divide the matters for investigation among three subcommittees. The conclusions reached by these subcommittees were finally adopted by the committee as a whole and presented to the conference in the form of: (1) A draft convention divided into three articles, dealing, respectively, with statistics, employment, and

reciprocity in the question of insurance against unemployment; (2) A draft recommendation consisting of four articles, two of which relate to the employment of workers, one to insurance against unemployment, and one to work undertaken by or on behalf of public authorities; (3) Four resolutions addressed to the governing body of the International Labor Office; (4) A draft convention on reciprocity in the treatment of foreign workers in all matters relating to the protection of labor.

The three articles of the draft convention provide, in general, that the States ratifying the convention shall communicate to the International Labor Office at intervals of not less than three months all available information and statistics regarding unemployment and the most successful measures taken to reduce unemployment. Furthermore, in States acceding to the convention, systems of free employment exchanges or agencies under a central management shall be established. Committees made up of employers and employees shall act in the capacity of advisers in carrying on the work of these exchanges, which is all to be coordinated by the International Labor Office in agreement with the States concerned.

The convention also directs that in the States ratifying it benefits from established unemployment insurance systems shall, upon terms agreed to by the States concerned, be extended to workers from other States employed in those States.

In connection with the convention it was recommended that the establishment of employment agencies charging fees be prohibited, that existing agencies of this character operate under State licenses, and that practical measures be taken to abolish them. The recommendations would also prohibit the recruiting of workers in one of the States ratifying the unemployment conventions with the view of their employment in another except as agreed upon by the countries concerned and after consultation with the employers and employees in the industries concerned. Effective systems of unemployment insurance should be established, managed either by the State or by State-aided associations, and furthermore the "International Labor Conference recommends that each State member of the permanent organization shall take measures with a view to coordinating the execution of work undertaken by or on behalf of the States and by public authorities with a view to reserving as far as practicable the work in question for periods of unemployment and for districts most affected by such unemployment."

The draft resolutions dealt with the best means of collecting and publishing information regarding unemployment, and information relative to agricultural workers, in connection with which it was

provided that the International Labor Office should arrange with the International Institute of Agriculture at Rome for the transmission of information collected by that body on the subject of agricultural employment. The question of the migration and protection of foreign workmen should be left to an international commission, which, while giving due regard to the sovereign rights of each State, should report upon measures for the protection of such workers.

A special draft convention relative to reciprocity of treatment of foreign workers provided that "the States ratifying this convention or acceding to it shall reciprocally admit to the benefit of the laws and regulations having regard to labor protection, as well as the right of lawful organization, the workers belonging to one of these States and employed in another, together with their families."

A minority report offered by Mr. Baldesi (Italy) set forth his opinion that a more equitable distribution of raw materials would be a means of preventing unemployment. He proposed that, "Considering that the question of unemployment is closely related to that of the distribution of raw materials and the means of maritime transport and freight rates, considering further that the question can only be effectively dealt with by the Council of the League of Nations, it is recommended that the Council should undertake to examine and solve the problem."

The labor delegates from France and Switzerland and the Polish Government delegate called attention to the condition of unemployment in the devastated countries now due to a dearth of raw materials and urged the adoption of Mr. Baldesi's motion. The employers' delegates generally opposed it on the ground that it was outside of the sphere of the International Labor Conference, which was trying only to regulate and improve labor conditions, to interfere with the rights of property. The question of ocean transport also entered into the discussion, and it was clear that an international control of freight rates, suggested in Mr. Baldesi's motion, would meet the disapproval of all mercantile seafaring nations. In fact, the employers' delegates from France and Switzerland, because of the complexities of the subject of unemployment and the general character of the recommendations, would have referred the committee report to the governing body, but this motion was lost, as was also Mr. Baldesi's.

The report as subsequently adopted contained two important amendments: (1) European States were limited to one-half the total membership of the international commission designed to study the regulation and protection of workers migrating from one country into another; (2) A substitute for the draft convention on the reci-

procuity of treatment of foreign workers was adopted, which, as finally drafted, reads:

The general conference recommends that each member of the international labor organization shall, on condition of reciprocity and upon terms to be agreed between the countries concerned, admit the foreign workers (together with their families) employed within its territory to the benefit of its laws and regulations for the protection of its own workers, as well as to the right of lawful organization as enjoyed by its own workers.

These amendments would give those nations to which workers would naturally migrate an equal voice on the commission, and at the same time leave to these nations the determination of the composition and of the civic rights of their population.

Employment of Women.

In reporting upon the employment of women, especially as regards night work, Miss Constance Smith (Great Britain), who made to the conference the only report presented by a woman, stated that the committee had in the main confined its work to the extension and application of the Convention of Bern, 1906, which prohibits night work for women in industry. While the principle embodied in that convention was, the chairman stated, unanimously supported by the committee, it was apparent that the great industrial changes which had developed since that time and the establishment of the League demanded a redrafting of the convention and the insertion of some new material, if it was to be an efficient international instrument.

According to the Bern Convention the limitations respecting night work apply only to undertakings employing more than 10 men or women. During the war it was necessary for several countries to suspend their factory laws and admit women to night work. This experience did not lessen the undesirability of night work for women, but rather strengthened that point of view, for the reason that while during that period it was found possible to supply certain safeguards in the large factories, in the small establishments where such safeguards are most needed they had with greatest difficulty been introduced. The proposal was made, therefore, that the limitation as to the numbers employed be removed, but that the original provision to the effect that the convention should in no case apply to "undertakings in which only the members of the family are employed" be retained.

In order to make the definition of industrial undertakings as nearly identical as possible in all the draft conventions presented to the conference, the following substitute was suggested for the original draft:

It is incumbent upon each contracting State to define the term "industrial undertaking." The definition shall in every case include—

(a) Mines and quarries and extractive industries of every kind.

(b) Industries in which articles are manufactured, altered, repaired, ornamented, finished, or adapted for sale, or broken up or demolished, or materials are transformed (including the generation, transformation, and transmission of motive power, electric, hydraulic, etc., shipbuilding, laundry work).

(c) Construction, reconstruction, repair, maintenance, alteration, or demolition of any building, railway, tramway, harbor, dock, pier, canal, inland navigation, road, tunnel, bridge, viaduct, sewer, drain, well, telegraphic, telephonic installation, electrical undertaking, gas work, waterwork, or other work or construction, and the preparation for and the laying foundation of any such work or building.

The laws of each individual country shall define the line of division which separates industry from agriculture and commerce.

The question of the adherence to the convention of certain countries hampered by climatic or backward industrial organization, of which India may serve as an example, was also one of the difficulties met by the committee. To facilitate this adherence a new article was introduced which provided that in countries covered by article 405, clause 3, of the Peace Treaty the application of the provisions of the convention might be suspended in "such industrial undertakings as may be defined in that respect by the Government of the country, provided that they should continue to be applicable to all establishments which are factories by the national law." The difference, for instance, in the definition of a factory in India and in Europe, and the divergence in the application of factory law, are such that the execution of the convention would be impossible in India unless exceptions were made.

Under the Bern Convention the prescribed rest period consists of 11 consecutive hours, including the time from 10 p. m. to 5 a. m., from which no exception is permissible. An effort was made by the Italian workers' delegate to extend the rest period to 6 a. m., making an absolute night rest of 8 hours. This proposed change injected into the discussion a consideration of the shift system, which had already been made the subject of a minority report by Mrs. Laura Casartelli Cabrini (Italy), in which she advocated an uninterrupted night rest of 8 hours' duration, thus leaving 16 hours to be divided into two 8-hour shifts.

It was contended that in industries in which the shift system is used this division of rest and working periods would be impossible, and the French employers' representative introduced a motion to the effect that the employment of women be authorized from 4 a. m. to 10 p. m. or 5 a. m. to 11 p. m., providing that the work of each shift be broken by one hour of rest. Both of these motions were defeated and the majority report adopted.

Perhaps the most advanced step taken by the conference was in the nature of the draft convention which was adopted concerning the

employment of women before and after childbirth. This convention, as finally approved, provides that (a) a woman wage earner shall not be employed during the six weeks immediately following confinement; (b) she shall have the right to leave her work six weeks before confinement, upon submitting a doctor's certificate stating that her confinement will probably take place in six weeks' time; and (c) she shall not be deprived of the benefits allowed, in case of mistake in estimating the probable time of confinement. In each case she is entitled to a maternity benefit paid either by the State or by means of a system of insurance. The amount of this benefit was left to the determination of the Government of each country, but it must be "sufficient for the full and healthy maintenance of the mother and the child." Free medical attendance is also granted. No woman may be dismissed during such absence until her absence has exceeded a "maximum period to be fixed by the competent authority in each country." Crèches are permitted. This convention, like the others, excepts undertakings in which only members of the same family are employed.

It should be noted also that it is not, like the other conventions, confined to industrial undertakings, but includes all women wage earners. As reported in by the committee it followed the form of the other conventions in this respect, but on motion of Mr. Jouhaux (France) its application was extended to commercial occupations. Mr. Jouhaux gave as his reason for this amendment the fact that about two-thirds of the women employed are in commercial undertakings. The adoption of a provision for maternity care and benefits which would affect only one-third of the women employed would, in his opinion, be "preposterous" and should not be adopted. It may be observed that while Mr. Jouhaux's statement is doubtless true, it is also probably true that there are relatively more single than married women in commercial work.

Among those who favored the majority report some apprehension was felt that the insertion of "commercial undertakings" might endanger the indorsement of the convention by the several Governments, and it was noticeable that several of the Government delegates abstained from voting on the proposition. Miss MacArthur (Great Britain) made an unsuccessful effort to abolish crèches. The Indian Government was requested to make a study of this phase of the employment of women and report to the next conference.

Employment of Children.

The report of the committee dealing with the minimum age of employment of children in industry was presented to the conference by Sir Malcolm Delevingne, chairman of the committee and Government

delegate from Great Britain, in the form of a draft convention. A unanimous decision had been reached fixing the age of admittance of children into industry at 14 years. In doing this the committee had, the chairman said, kept in view two objects: First, to obtain a real advance over existing conditions and, second, to make proposals which would be likely to meet with general acceptance. While the committee desired to fix a higher age than 14 years it had been felt that Government sanction could not be obtained, and that the age of 14 would be a real advance in many countries.

One of the difficulties met in reaching this decision was as to allowing exceptions through the transitional period in the case of countries where the age for leaving school under the educational law had not been fixed as high as 14 years. It was urged that it might be impossible for those countries to so order their educational systems as to fill in the gap between the school-leaving age and the age when the children could be given employment, but the committee decided by a majority vote that the time fixed—January, 1922—should stand.

A still greater difficulty presented itself in the matter of what modifications should be made in the case of countries with special industrial or climatic conditions. These countries, the chairman said, might be considered as constituting two groups: (1) Japan; (2) India, China, Persia, and Siam. An agreement was reached with Japan, whereby (*a*) the minimum age should be 14, but a child over 12 years of age might be permitted employment if he had finished the course in the elementary school; (*b*) the provision in the present law admitting children under 12 to certain light and easy employments should be repealed; (*c*) as regards children between 12 and 14 who have been employed the Government reserved the right to make transitional regulations.

In the case of India and other oriental countries the committee did not present a final recommendation on the ground that the questionnaire issued by the organizing committee did not reach India in time for consideration before the delegates left for America, and a proposal was made that the question of the minimum age of the employment of children as regards these countries be brought up at the International Labor Conference of 1920, when the Governments would have had opportunity to consider it.

A counter proposal was made by Miss Margaret Bondfield, speaking for the British workers' delegate, to the effect that "children under 12 should not be employed (*a*) in factories working with power, employing more than 10 persons; (*b*) in mines and quarries; (*c*) on railroads; (*d*) on docks."

In urging her amendment Miss Bondfield said that in drafting it care had been taken to select industries which were not small native

industries, but which in the main were those supervised by western people and should have western safeguards. While the educational system was doubtless insufficient at present to meet the situation, one of the best ways of securing quick governmental action in this matter was, she asserted, to prohibit child labor.

Mr. Chatterjee, Government delegate from India, opposed the amendment, insisting that time was needed to create public sentiment for such a radical departure, while Mr. Joshi, workers' delegate, earnestly supported it for the reason given by Miss Bondfield in proposing it. The report with the amendment in question was adopted.

Night work in industrial establishments was prohibited for minors under 18 years of age with the following exceptions:

ART. 3. The prohibition of night work shall not apply to young persons over the age of 16 who are employed in the following industries or work which is required by the nature of the process or to avoid the waste of fuel or material to be carried on continuously, day and night.

(a) Manufacture of iron and steel; processes in which reverberatory or regenerative furnaces are used; and galvanizing of sheet metal and wire (except the pickling process).

(b) Glassworks.

(c) Manufacture of paper.

(d) Manufacture of raw sugar.

[(e) Gold mining reduction works.]¹

ART. 4. The prohibition of night work for young persons over 16 years of age may be suspended.

(a) If [in case of serious emergency the] ¹ public interest requires it.

(b) When some emergency which the employer could not control or foresee, and which is not of a periodical character, occurs to interfere with the normal working of the undertaking.

ART. 5. The provisions of the present convention are applicable to girls of less than 18 years of age whenever these provisions involve greater restrictions on the period of employment than those provided by the Bern Convention on the Night Work of Women of the 26th day of September, 1906.

The period of night rest shall comprise 11 consecutive hours and shall include the period between 10 p. m. and 5 a. m., except in tropical countries where work is suspended in the middle of the day. Here the period of night rest may be less than 11 hours if compensatory rest is given during the day. In bakeries where night work is prohibited for all workers, the hours 9 p. m. to 4 a. m. may be substituted for the hours of rest fixed by the convention. Coal and lignite mines are also exceptions to this provision.

As in the case of hours of employment of women, the question of the shift system entered into the discussion. To meet the case of countries where the national law requires that a longer period of rest

¹ Amendment.

should be allowed during the course of the shift, the committee recommended that "in industries in which work is divided into two shifts the first shift may begin at 4 a. m. and the second may finish at 10 p. m., or the first shift may begin at 5 a. m. and the second may finish at 11 p. m." On the motion of Mr. Baldesi (Italy) this entire paragraph was deleted.

It was furthermore found necessary to modify the convention in its application to Japan and India. As to Japan, 15 years of age for the first three years after the convention becomes operative and after that time 16 years of age was substituted for 18 years as provided in the convention. As to India, the convention applies only to such persons as come under the factory act, and for boys, 14 years was substituted for 18 years. In the regions devastated by war the prohibition of night work for minors between 14 and 16 was referred to the International Labor Conference of 1921. The entire convention is to come into force not later than July 1, 1922.

The resolutions on child labor passed by the International Congress of Working Women and submitted to the conference are interesting in view of the action taken, as presenting standards toward which future international labor conferences may strive.

Employment of Children.

(a) *Minimum age.*—No child shall be employed or permitted to work in any gainful occupation unless he is 16 years of age, has completed the elementary school, and has been found by a school physician or other medical officer especially appointed for that purpose to be of normal development for a child of his age and physically fit for the work at which he is to be employed.

No young person under 18 years of age shall be employed in or about a mine or quarry.

The legal workday for young persons between 16 and 18 years of age shall be shorter than the legal workday for adults.

(b) *During the night.*—No minor shall be employed between the hours of 6 p. m. and 7 a. m.

(c) *In unhealthy processes.*—Prohibition of the employment of minors in dangerous or hazardous occupations or at any work which will retard their proper physical development.

Administration.

(1) *Work permits.*—A yearly medical inspection by medical officer appointed for that purpose by the authorities, records of which shall be kept.

(2) Lists of employed minors with their hours of work shall be posted in all workrooms in which they are employed.

(3) The number of inspectors, and especially women inspectors, employed by the factory or labor commission shall be sufficient to insure regular inspection of all establishments in which children are employed and such special inspections and investigations as are necessary to insure the protection of the children.

We further recommend compulsory continuation schools for minors until the age of 18.

Unhealthy Processes.

The report of the committee on unhealthy processes was made by Dr. Legge (Great Britain), chairman, in the form of recommendations and not as draft conventions. This was a disappointment to some of the groups who felt that the committee's suggestions on this important subject should have been presented in a more binding form.

The recommendations as to processes applied only to lead poisoning and to anthrax. In the case of lead poisoning the committee recommended that "in view of the danger involved to the function of maternity and to the physical development of children, women and young persons under the age of 18 years be excluded from employment in the following processes:

- (a) In furnace work in the reduction of zinc or lead ores.
- (b) In the manipulation, treatment, or reduction of ashes containing lead, and in the desilvering of lead.
- (c) In melting lead or old zinc on a large scale.
- (d) In the manufacture of solder or alloys containing more than 10 per cent of lead.
- (e) In the manufacture of litharge, massicot, red lead, white lead, orange lead, or sulphate, chromate or silicate (frit) of lead.
- (f) In mixing and pasting in the manufacture or repair of electric accumulators.
- (g) In the cleaning of workrooms where the above processes are carried on.

It was further recommended that the employment of women and young people in processes involving the use of lead compounds be permitted subject only to the following conditions:

- (a) Locally applied exhaust ventilation so as to remove dust and fumes at the point of origin.
- (b) Cleanliness of tools and workrooms.
- (c) Notification to Government authorities of all cases of lead poisoning, and compensation therefor.
- (d) Periodic medical examination of the persons employed in such processes.
- (e) Provision of sufficient and suitable cloakroom, washing, and messroom accommodation, and of special protective clothing.
- (f) Prohibition of bringing food or drink into workrooms.

Furthermore, in industries where soluble lead compounds can be replaced by nontoxic substances, use of soluble lead compounds should be strictly regulated.

For the purposes of this recommendation, a lead compound should be considered as soluble if it contains not more than 5 per cent of its weight (estimated as metallic lead) soluble in a quarter of 1 per cent solution of hydrochloric acid.

As regards anthrax the report recommended that "arrangements should be made for the disinfection of wool infected with anthrax

spores either in the country exporting such wool, or, if that is not practicable, at the port of entry in the country importing such wool."

Recommendation was also made for the establishment of an efficient factory inspection service in each country belonging to the international labor organization where it does not already exist, and also for the creation in each country of a Government service whose duty it shall be to safeguard the health of workers and to keep in touch with the International Labor Office.

All three of these recommendations were adopted.

White Phosphorus in Match Factories.

On a motion presented by Sir Malcolm Delevingne (Great Britain) the conference unanimously adopted a resolution recommending to "all members of the international labor organization which have not yet done so that they should adhere to the international convention adopted at Bern in 1906, on the prohibition of the use of white phosphorus in the manufacture of matches."

The Governing Body of the International Labor Office.

Steps were taken at the conference to effect a permanent organization of the International Labor Office through the creation of a governing body. This body is composed of 24 members, 12 representing the various Governments, 6 representing employers and 6 representing labor, elected by the different groups. The Government representatives will be nominated by the following countries: Belgium, France, Great Britain, Italy, Japan, Germany, Switzerland, Spain, Argentina, Canada, Poland, and, pending the appointment of the United States representative, Denmark.

The employers' representatives are: Sir Allan Smith, Great Britain; Mr. Louis Guérin, France; Mr. Pirelli, jr., Italy; Mr. Jules Carlier, Belgium; Mr. F. Hodacz, Czecho-Slovakia; and, pending the appointment of a representative of the United States employers, Mr. Schindler, of Switzerland.

The workers' representatives are: Mr. Léon Jouhaux, France; Mr. J. Oudegeest, Netherlands; Mr. Stuart-Bunning, Great Britain; Mr. H. Lindqvist, Sweden; and, pending the appointment of a representative of the United States, Mr. Draper, of Canada.

Reservation was made in each group for the United States representative and in the labor group for the German representative.

The Latin-American delegates entered a written protest against the fact that the 20 Latin-American nations had been assigned only 1 place out of a total of 24 places in the governing body. They contended that if the conference is to be an international and not a

European conference, a more equitable system of representation must be devised. In this remonstrance against what was considered an unfair discrimination against non-European nations, they were joined by the delegates from South Africa, on the part of whom Mr. Gemmill, employers' representative, introduced a resolution providing "that this conference expresses its disapproval of the composition of the governing body of the International Labor Office, inasmuch as no less than 20 of the 24 members of that body are representatives of European countries."

Mr. Fontaine (France), speaking for himself, explained that the delegates were selected in accordance with the act setting up the conference, and while the composition of the body was not perfect he called attention to two facts: (1) The governing body will sit at Geneva, and will meet every two months. It would therefore be more convenient for members from European countries to attend than those farther away. (2) Through a system of grouping, small countries having no industries might be able to decide important questions affecting countries having great industries or large mining operations. The resolution was, however, adopted by a vote of 44 to 39.

The governing body elected Mr. Albert Thomas (France) provisional director general of the International Labor Office under the League of Nations, and Mr. Arthur Fontaine (France) permanent chairman. The office will be located provisionally in London.¹ The next meeting of the governing body will be held in Paris, January 26, 1920.

Regulations, covering the composition, officers, order of procedure, etc., of the conferences, as well as the election of the members of the governing body of the International Labor Office, were adopted.

Admission of Other Countries.

The discussion of the question of the admission of other countries into membership in the International Labor Conference brought out a decided difference of opinion regarding the construction to be placed upon the article in the Peace Treaty relating to membership in the international labor organization.

A decision in the case of Luxemburg, of the Dominican Republic, and of Mexico was readily reached, for the reason that the organization is composed of Governments and that participation in the conference by the representatives of any nation must be preceded by an application for membership from the Government of the nation. There had been no official request for membership on the part of the

¹ Sunderland House, Curzon Street, W. I.

Governments of Luxemburg,¹ the Dominican Republic, and Mexico at the time of the discussion, and therefore the committee on applications reached the unanimous opinion that no recommendation could be made on an application presented by third parties.

As regards Finland the committee was unable to present a unanimous report. The majority report presented by Mr. Gino Baldesi (Italy) favored the admission of Finland. His reasons for such admission were that Germany and Austria had been admitted, and that the Supreme Council at Paris had, on October 2, received two requests for admission to the conference, one from Finland and one from Norway, neither of which Governments was at that time a member of the League of Nations. The Supreme Council decided that the question of the admission of Finland, Norway, and also the Netherlands should be left to the approaching conference at Washington. Hon. N. W. Rowell (Canada), in presenting the minority report, based his objections to the admission of Finland on the ground that the conference had no power to admit Finland to the international labor organization. The Supreme Council, he contended, had no right to interpret the treaty. Admission to the international labor organization must come through the League of Nations. He moved that for these reasons the conference recommend to the League of Nations the immediate admission of Finland, and that her delegates be welcomed to an informal participation in the conference. The admission of Germany and Austria was not a parallel case because Germany had asked before she signed the treaty that she be admitted to the League of Nations and also to the international labor organization.

Senator Halfred von Koch (Sweden) maintained that the Supreme Council had the power to interpret the treaty until the League of Nations came into existence, and urged the admission of Finland on the additional ground of her industrial organization and the assistance her former experience in such conferences would be. Delegates from both employers' and workers' organizations, he said, were in Washington ready to participate in the conference. Sir Malcolm Delevingne (Great Britain) supported Mr. Rowell's motion, while Mr. Stuart-Bunning, speaking for the British workers' delegation, defended the minority report. It may be said that the workers' representatives generally favored admitting Finland. Finally, the majority and minority agreed on the following:

The conference, without giving a ruling on the question of principle, welcomes the delegates nominated by Finland to attend the Washington meeting, and invites these delegates to take part in the conference on the same condi-

¹ Later on Luxemburg applied for admission into the conference and was admitted.

tions as obtain in the case of other countries which have not adhered to the covenant of the League of Nations.

Agenda for the Conference of 1920.

The agenda for the conference of 1920 was not determined. A large number of proposals were made in the bulletins from day to day, among which were a revision of the standing orders in regard to the composition of the governing body and the position of agricultural workers, but the conference decided to leave the final selection of subjects to the governing body, who, from the suggestions and resolutions sent in from the various sections would be in a position to know which subjects were of the greatest importance.

All questions relating to seamen were referred to the special conference on employment at sea.

Opinions Regarding the Conference.

Two very distinct attitudes toward the functions of such a conference as this prevailed. Some of the more radical members believed that it was the function of the conference to set maximum standards toward which the various States were to strive; the other group believed it advisable for the conference to set up immediately attainable maximums, to keep their feet upon the ground, as it were, within the region of practicalities.

Those who had hoped that the conference might be a more forward-looking body were disposed to be critical of the lack of action on many points. Those viewing the conference from the other angle expressed great satisfaction at what had been accomplished. It was, as one of the delegates remarked, the first time that representatives of Governments, employers, and workers had come together internationally to seek a solution of industrial problems and to recommend measures for the alleviation of working conditions. This fact in itself should establish a sound basis for further social legislation.

At first glance the changes recommended do not appear material. It is doubtless true that the action on the 8-hour day is simply a "marking of time" for many nations which were represented in the conference, and which have already adopted that or a better working schedule. It did, however, crystallize opinion upon the subject, and in the case of Japan and tropical countries the modifications agreed to, if carried out by those countries, effect an important reduction of hours. The general age of the admission of minors to industry was set at 14 years, while the limit for admission of minors into night work was advanced from 16 to 18 years. Substantial changes in this respect were recommended for Japan and India. If the convention

dealing with the employment of women, especially as regards maternity care and benefits, is indorsed by the various Governments, a marked advance over existing legislation will have been made and a very necessary protection afforded the future of the race.

Genuine regret was expressed at the absence of delegates from the United States from the conference, and the opinion voiced that their presence would undoubtedly have affected the results.

A greater unity of spirit prevailed than might have been expected from a gathering representing such conflicting interests. While the different groups naturally wished and tried to protect the interests of their own countries, and in some cases to gain advantages for them, there was a real effort, as evidenced by the concessions made in committees and in debate, to take such action as would not only secure the end for which the conference was called, but would from its practical nature commend it to the Governments to which it must be submitted for approval and indorsement.

Cost of Living in the United States—Furniture and House Furnishings.

IN connection with the cost-of-living-survey articles which have been appearing in the MONTHLY LABOR REVIEW for several months, the following table presents a summary of expenditures for furniture and house furnishings. In order to show enough cases to make the figures authoritative, data from a number of cities have been combined. The table has been divided into two sections. The following northern cities are included in the first group:

Boston, Mass.	Fall River, Mass.	Omaha, Nebr.
Bridgeport, Conn.	Fort Wayne, Ind.	Philadelphia, Pa.
Buffalo, N. Y.	Grand Rapids, Mich.	Pittsburgh, Pa.
Chicago, Ill.	Indianapolis, Ind.	Portland, Me.
Cincinnati, Ohio.	Kansas City, Kans.	Providence, R. I.
Cleveland, Ohio.	Kansas City, Mo.	St. Louis, Mo.
Columbus, Ohio.	Lawrence, Mass.	St. Paul, Minn.
Des Moines, Iowa.	Manchester, N. H.	Scranton, Pa.
Detroit, Mich.	Milwaukee, Wis.	Syracuse, N. Y.
Duluth, Minn.	Minneapolis, Minn.	Trenton, N. J.
East St. Louis, Ill.	Newark, N. J.	Wichita, Kans.
Evansville, Ind.	New York, N. Y.	Wilmington, Del.

The following southern cities are included in the second group:

Atlanta, Ga.	Houston, Tex.	Mobile, Ala.
Baltimore, Md.	Jacksonville, Fla.	New Orleans, La.
Birmingham, Ala.	Knoxville, Tenn.	Norfolk, Va.
Charleston, S. C.	Little Rock, Ark.	Oklahoma City, Okla.
Dallas, Tex.	Louisville, Ky.	Richmond, Va.
El Paso, Tex.	Memphis, Tenn.	Savannah, Ga.

Under each of these groups the data as to the average number of articles purchased per family in a year, with the average expenditure per family and per article, are shown by income groups and for all incomes. The total number of families represented in the northern group of cities is 6,180; in the southern group, 1,983.

In the case of a few items, such as "pictures, frames, and other ornaments," and "other laundry utensils," when the number of articles could not be ascertained, or if given would be meaningless, only the average cost per family has been given.

Under the several items, "expenditure" per family and per article is shown instead of "cost." This is due to the fact that a great deal of furniture is bought on installments and the payments often extend over a period of more than a year. In such cases the amount paid

during the year was reported rather than the total cost of the article. For this reason the figures in the table do not give any definite clue to the expensiveness of the articles purchased.

As the requirements of the survey limited the families scheduled to those having at least one child and having kept house in the locality a year, and as most families scheduled had been actually keeping house several years, the expenditures for furniture and house furnishings were largely devoted to upkeep. Few new outfits of furniture were reported, the articles purchased being bought to replace old ones that had outlived their usefulness, or, in some instances, to meet the requirements of a growing family or to supply the demands of a higher standard of living than the family had been accustomed to in the past.

Quantity-Cost Budget Necessary to Maintain Single Man or Woman in Washington, D. C.¹

THESE are presented here tentative quantity and cost budgets necessary for the maintenance of a single man and a single woman in the clerical service of the Government in Washington, D. C., at a level of health and decency, the cost of the items included being based on prices prevailing in the National Capital in August and September, 1919.

It should be stated that on November 1 car fares were advanced to 6½ cents, thus increasing the expense for this item to \$46.50, and bringing the total budget, including savings, to \$1,067.78 in the case of a single man and to \$1,151.15 in the case of a single woman. The other items in the budget have changed but little, if at all.

Summary of Annual Budget.

	Single man.	Single woman.
1. Room (2 in a room) \$15 per month per person.....	\$180. 00	\$180. 00
2. Board:		
Regular table board, two meals on week days, three on Sunday, \$6 per week.....	312. 00	312. 00
Lunch, 25 cents per day, 313 days.....	78. 25	78. 25
Other food, fruit, confectionery, etc., 25 cents per week.....	13. 00	13. 00
3. Clothing.....	158. 36	240. 15
4. Laundry.....	52. 00	65. 00
5. Toilet supplies, etc.....	15. 00	10. 00
6. Health—medical charges, dentist, oculist.....	32. 00	43. 00
7. Religious organizations—10 cents per week.....	5. 20	5. 20
8. Labor organizations.....	5. 00	5. 00
9. Newspapers.....	8. 40	8. 40
10. Books and magazines (no special allowance—see text).....		
11. Car fare.....	37. 20	37. 20
12. Amusements, recreation, etc.....	39. 00	20. 00
13. Vacation (no special allowance—see text).....		
14. Educational purposes (no special allowance—see text).....		
15. Other incidentals.....	26. 00	20. 00
Total (not including savings).....	961. 41	1, 037. 20
16. Savings—10 per cent of total expenses.....	96. 14	103. 72
Total (including savings).....	1, 057. 55	1, 140. 92

¹ For summary report of this Bureau's study to determine the cost of maintaining the family of a Government employee in Washington at a level of health and decency and the cost involved in reaching such determination, see MONTHLY LABOR REVIEW for December, 1919, pp. 22 to 29.

Itemized Details of Budget—Rent.

Room, \$15 per month..... \$180.00 per year.

An investigation covering 50 houses in different sections of the city, including commercial boarding houses and private houses, developed that the approximate minimum cost of a clean and fairly comfortable room in a house with bath facilities was \$15 per month per person for two in a room.

A very few rooms sufficiently good to be livable were found at a slightly lower monthly rental, but these were very few in number and usually in private families where spare rooms were rented without much regard to or understanding of prevailing rates. At present, the prevailing rate seems to be \$17.50 per month for two in a room, but a sufficient number were found at \$15 per person to suggest that this sum may be taken as a minimum. This is the prevailing price per person at the Y. M. C. A. for two in a room.

The investigation covered all sections of the city. In general, very slight variations in price were found between sections for similar accommodations.

The allowance of \$15 a month is considerably lower than the rate for rooms at the Government dormitories for women, where \$20 per month per person is charged. Single rooms are rented for \$20 or double rooms for \$40.

Food.

Table board (2 meals on week days and 3 on Sundays), \$6 per week	\$312.00 per year.
Lunches (313 days at 25 cents per day)	78.25 per year.
Other food, fruit, confectionery, sodas, etc., 25 cents per week	13.00 per year.
Total.....	403.25 per year.

The prevailing rate for table board—2 meals on week days and 3 meals on Sundays—is \$6 per week, in good, and moderately good places. The lowest seems to be \$22 per month, and the places found at this rate were unprepossessing. On the other hand, \$30 per month is now quite frequent for board at regular boarding houses.

Board at the prices just cited includes, almost invariably, only two meals on week days, leaving the midday lunch as an extra expense. Probably the lowest priced lunch available is that known as the "box lunch" served from wagons in the streets and costing 20 cents. The box lunch usually consists of two sandwiches, a piece of pastry and a piece of fruit. It is possibly sufficiently nutritious for the midday lunch of an office worker but in very many cases will be

supplemented by such items as coffee, milk, a banana, an apple, at an additional expense of 5 or 10 cents.

An additional allowance of 25 cents per week is made in this budget for fruit, sweets, and other minor food items. These are not absolutely necessary, but most persons living in boarding houses find some supplementary expenditure, especially for fruit, highly desirable.

The rate for board at the Government dormitories for women is \$25 a month for two meals a day—but board in the dormitories is available only to women who occupy dormitory rooms. Thus the total cost for board, 2 meals a day, and lodging at the Government dormitories is \$45 per month—somewhat higher than the minimum allowance in this budget.

Clothing.

Clothing, man (including repairing and cleaning)-----	\$158.36 per year.
Clothing, woman-----	240.15 per year.

The clothing articles, listed below, as the minimum necessary for a single man are, with two exceptions, identical with that worked out for the husband in the family budget recently prepared. As in both cases the man is presumed to be a Government employee, it would seem that the minimum clothing requirements should be about the same. The two exceptions are cleaning and pressing and miscellaneous, both of which are considerably increased for the single man's budget, for the reason that the man living alone is usually unable to do the mending and repair work which a wife usually does, and thus the life of many garments is considerably shortened. Rather than attempt, however, to increase the number of garments on this account (for which no good information exists) it has seemed better to allow a more liberal sum for miscellaneous and for cleaning, pressing, and repairing. Therefore, the miscellaneous item is increased from \$3 to \$15 per year, which allows an additional \$1 per month for replacement, etc., and the item for cleaning, pressing, and repairing is increased from \$6 to \$31.20 per year. Information on this latter point was derived from inquiries made at the local Y. M. C. A., which indicates that the average sum spent by low-salaried residents at that place was: For pressing, 1 suit 4 times a month at 40 cents each; cleaning and pressing 4 times a year, at \$1.50 each time; and about 50 cents per month for repairs. These items would total \$31.20 per year.

On account of the difference in occupation, the clothing of the single woman will vary considerably from that of the Government worker's wife. While the housewife will wear her "better" clothing

two or three times a week, and usually only when the weather is favorable, the working woman must appear every day in the week, in all varieties of weather, dressed in clothes of good quality kept neat and clean. In order to withstand this more strenuous wear, a greater quantity and perhaps a better quality of clothing must be provided for the Government worker than for the housewife.

In preparing the clothing budget for the single woman, the quantities allowed in the study of wage-earning women made by the Bureau of Labor Statistics for the calendar year 1916 have been followed rather than the quantity budget recently prepared for the Government worker's wife. In a few instances even the quantities approved in the wage-earning women study have been decreased in order to bring this budget to a bare minimum.

The cost of the wage earners' budget in the 1916 study was approximately \$125. Since that time clothing prices in Washington have undoubtedly increased not less than 100 per cent. In the light of such an increase, the total of the following budget, \$240.15, appears sufficiently niggardly.

The following are the clothing budgets for a single man and a single woman in the Government service:

UNIT PRICE, REPLACEMENT PER YEAR, AND ANNUAL COST OF CLOTHING FOR SINGLE MAN AND SINGLE WOMAN IN GOVERNMENT SERVICE IN WASHINGTON, D. C.

Article.	Unit price.	Annual replacement.	Yearly cost.

Total.....			240.15

Laundry.

Laundry, man, \$1 per week..... \$52 per year.
 Laundry, woman, \$1.25 per week..... 65 per year.

Assuming only sufficient changing of clothing to insure ordinary cleanliness, a man's laundry, done at a steam laundry, costs at prevailing prices approximately \$1.67 per week.

Inquiries made at a large local laundry showed the average bill for 200 laundry bundles left by young men to be 78 cents. This relatively small average was attributed by the manager to the fact that the bundles often include only collars and shirts, indicating that the soft laundry is done either by washerwomen or by the men themselves. At the Y. M. C. A., an average of 385 laundry bills in September was \$1.10. Some of these clearly included more than a week's laundry, and the opinion there was that the low-salaried man averaged about 80 cents per week, many of these men washing small articles, such as handkerchiefs and socks, in their rooms.

In view of these indications, it would seem that an average of \$1 per week is about the lowest sum for which a man can have sufficient laundry work done to maintain reasonable cleanliness, and in allowing this sum, moreover, it was assumed either that soft work is done by washerwomen at a lower cost than that of the steam laundries or that the man does some of his laundry work.

Inquiries among woman workers indicate that \$1.25 per week is the lowest average amount which could be allowed for laundry. In the summer when a considerable amount of white clothing is being worn, the laundry expense would doubtless be higher than \$1.25 a week, but in the winter season many woman workers secure their laundry for only \$1 a week, so that an average of \$1.25 seems within reason. It is assumed, of course, that the work will be done by a washer-woman rather than by a steam laundry.

Toilet Supplies.

Toilet supplies and services, man.....	\$15 per year.
Toilet supplies, woman	10 per year.

This group includes for men a long list of items—tooth paste, tooth brush, hand soap, shaving soap and brush, razor, hair brush, comb, shoe polish, and hair cutting. The prevailing price for hair cutting is 50 cents. An average of one hair cut every three weeks would thus amount to \$8.50 per year. For the other items listed, no precise data exist regarding the number of units needed per year. But assuming that a man shaves himself and polishes his own shoes, it would seem that the minimum yearly expense for these items would be at least \$6.50.

For women the item includes expenditures for toothbrushes, toothpaste, toilet soap, shampoo soap, hairbrush, comb, shoe polish, talcum powder, face powder, toilet water, etc.

Health.

Health, man.....	\$32 per year.
Health, woman.....	43 per year.

This item includes expenditures for medical attention in case of sickness, medicines, dentist, and oculist. No information exists regarding the necessary expenses for these purposes by a single man in Government employment or in occupations of analogous character. The investigation of wage-earning women in Washington, made by the Bureau of Labor Statistics in 1916, showed that the average expenditure for these purposes by the group of self-supporting women covered by the investigation was \$22.54 per year. For women with incomes of \$800 or over, however, the average expenditure was approximately \$32 per year; and this sum may be taken as a more accurate measure of the necessary expenditure by wage-earning women at that time, as the maintenance of health is rarely a subject of extravagance, the expenditures tending to rise constantly with increasing income.

The allowance for health for the single woman is \$43. In the absence of data regarding the health expenditures of single men, it

may be assumed as probable that the average man has a smaller expenditure on this item than the average woman. Therefore, the allowance here made for the single man, \$32, the same amount as was spent by single women in 1916, would seem reasonable, as the increase in the cost of all medical service between 1916 and 1919 has probably been at least $33\frac{1}{3}$ per cent. Allowing this rate of increase for women, the necessary cost of maintaining good health is placed at \$43.

Religious Organizations.

Religious organizations----- \$5.20 per year.

Attendance at almost all churches or religious associations involves a practical obligation to make some contribution. The sum of 10 cents per week for this purpose seems a fair minimum in the case of both men and women.

Labor Organizations.

Labor organizations----- \$5 per year.

Membership in labor organization is now so frequent among all classes of workers, including the clerical staff of the Government, that expenditures for this purpose must be recognized. The clerical workers' organization is known as the Federal Employees' Union, the dues being 50 cents a month or \$5 per year in advance. Employees in the mechanical divisions, however, such as machinists, carpenters, printers, etc., affiliate usually with the regular craft unions, where dues are as a rule considerably higher than in the Federal Employees' Union.

Newspapers, Books, and Magazines.

Newspapers----- \$8.40 per year.

Books and magazines----- Nothing.

The reading of a daily newspaper is so customary and so desirable as an incident to intelligent citizenship that an expenditure for this purpose may be regarded as a necessity. The Washington daily papers are not uniform in their subscription rates, the two most expensive costing \$8.40 per year. This sum is here allowed, as the individual should be free to choose the paper he prefers and in any case the difference is not large.

No special provision is here made for the purchase of magazines, books, and other reading matter. It is assumed that the free public libraries can be availed of by those who are seeking to live with close economy. Any special expenses along this line, due to individual tastes, would, under this budget, have to be charged to the amusement and recreation allowance.

Car Fare.

Car fare (744 rides)----- \$37.20 per year.

Although a few single men and women may be fortunate enough to secure a comfortable room sufficiently near their office to render car fare unnecessary, the larger portion of them are obliged to ride to and from their work. In view of this it seems reasonable to allow two car rides per day for each working day, or 600 rides in total.

Some additional car riding, such as that incident to visiting friends and attending lectures, concerts, or movies occasionally is almost inevitable. Therefore a minimum of six round-trip rides per month is allowed for this purpose.

Amusements, Recreation, Etc.

Amusements, recreation, etc., man----- \$39 per year.

Amusements, recreation, etc., woman----- 20 per year.

The average single man, particularly a young man, living in a boarding house, will inevitably feel it necessary to make some expenditures for amusements. Membership in the Young Men's Christian Association probably offers the greatest return of wholesome amusement for the least money. This will cost \$15 per year. In addition, there will be at least occasional outside amusements, such as the moving pictures, excursions, and games. In the case of the normal young man, moreover, there will be the expenses of courtship, which, as a matter of custom and pride, will be paid at the sacrifice of almost anything else.

No data are available for this class of expenditures for men. For women the investigation of the Bureau of Labor Statistics in 1916 developed that the average expenditures for amusements by the wage-earning women covered by that investigation was only \$7.44 per year. This average was unduly low, because the study included a number of women at such very low earnings that they had absolutely no expenditures on amusements of any kind. If these had been eliminated, the average would have been between \$10 and \$12 per year. For the reasons above cited, and particularly because when young men and young women have their amusements together custom prescribes that the man bears the expense, it seems reasonable to assume that the minimum expenditure for amusements should be considerably higher for single men than for single women. In view of this, and in view of the increased costs of most amusements, an allowance of 75 cents a week for this item seems very moderate.

Single women, as a rule, living in boarding houses will feel the necessity for a reasonable amount of amusements. Assuming that some of these expenses will be met by young men, the amount allowed

in this budget need not be very large. However, it seems reasonable that the average young woman will spend at least \$20 a year for amusements and recreation. This figure will provide simple amusement for only about one night a week.

Vacation.

Vacation----- Nothing.

No special provision is here made for vacations. Under the regulations of most Government departments in Washington a reasonable amount of annual leave with pay is granted. This permits a vacation without loss of pay. It is not felt that special provision for the expenses of out-of-town vacations should be regarded as absolutely necessary in a minimum budget of health and decency.

Education.

Educational purposes----- Nothing.

In the case of younger men particularly, it is highly desirable that additional school attendance, such as the law school, business college, and art school should be encouraged. This practice, moreover, is quite common among Government employees. No special allowance for this item, however, is made in the budget on the grounds (1) that such expenditure is normally limited to a rather short period, and (2) that the ambitious man attending school in the evenings almost always effects considerable reduction in the amount of money spent for amusement and vacation.

Incidentals.

Other incidentals, man----- \$26 per year.

Other incidentals, woman----- 20 per year.

This group includes a large number of items which, for the most part, are either inexpensive or of only occasional occurrence; such items, for instance, as stationery, stamps, notebook, pocketbook, occasional use of telephone and telegraph, and tobacco. The only pertinent information on the cost of the miscellaneous items is the study made by the United States Bureau of Labor Statistics of wage-earning women in Washington in 1916. This study showed an average expenditure on other incidentals of about \$15 per year by the wage-earning women with incomes of \$600 or more covered by that investigation. Using this as a guide and allowing for increases in the cost of most articles it would seem reasonable to allow 50 cents a week for this miscellaneous group as a necessary minimum for a single man, and \$20 a year for a single woman.

Savings.

Savings, man	\$96.14 per year.
Savings, woman	103.72 per year.

In the budget proper no provision is made for savings (i. e., bank account, insurance, etc.), it being felt that savings should be regarded rather in the nature of profits than as an item of expense. The importance of savings, whether in the form of a bank deposit, insurance, or property investment, is universally recognized. The only point of dispute is as to the amount that should be considered as essential. An amount equivalent to 10 per cent of living expenses would seem to be very reasonable.

The British National Health Insurance System, 1911-1919.

By HENRY J. HARRIS.

BY THE act of December 16, 1911, which came into operation on July 15, 1912, a system of compulsory health and invalidity insurance was introduced into Great Britain. The following pages summarize the provisions of this act as amended by the legislation of 1913, 1918, and 1919. The Bureau of Labor Statistics purposes in the near future to publish a more complete account of this system, in bulletin form.

Industries and Occupations Included.

The general rule is that the insurance includes all persons, men and women, 16 years of age or over, under any contract of service for which remuneration is paid. The most important limitation on this general rule relates to nonmanual employments. Persons employed at other than manual labor whose annual remuneration exceeds £250¹ are not included. Prior to July 1, 1919, this limitation was £160. Under the present law those whose earnings from employment fall between £160 and £250 may be exempted if they make application before January 1, 1920.

The official Handbook of Approved Societies (1915) sums up the groups required to be insured as follows:

1. Persons in employment by way of manual labor.
2. Persons in any employment at a rate of remuneration not exceeding in value £160 [now £250].
3. Persons engaged in some regular occupation and wholly or mainly dependent for their livelihood on the earnings derived from that occupation and whose total income, including earnings, does not exceed £160 [now £250] per year.
4. One who has been an insured person for five years or upward.
5. One who has been an employed contributor and being of the age of 60 or upward, who shows to the satisfaction of the insurance commissioners (now the Ministry of Health), that he or she has ceased to be insurable as an employed contributor.

¹ Owing to the fluctuation in value of the British pound sterling conversions are not made in this article. Normally the value of the pound sterling is \$4.8665; the shilling, 24.33 cents; the penny, 2.03 cents.

It will be noted that there is now practically no age limit, though pecuniary benefits are not paid after the age of 70 is reached. The employments include agriculture, industry, commerce, transportation, and public service.

The persons exempt from the insurance are those who have rights to sickness and other benefits from certain specified sources, such as railway employees, school-teachers, etc., who are entitled to such benefits from existing funds. Casual employments are exempt unless the employment is in the regular line of the employer's trade or business.

If the person employed within the general terms of the law can prove that (1) he is in receipt of any pension or income of the annual value of £26 or more and not dependent on his personal exertions, or (2) that he is ordinarily and mainly dependent on some other person for his livelihood, or (3) that he is dependent for his livelihood on earnings derived from an occupation which is not employment as already defined, then he may be granted exemption by the authorities.

Voluntary insurance is permissible to persons who are not engaged in any employment which will make them employed persons within the meaning of the law, provided they are engaged in some regular occupation and are wholly or mainly dependent for their livelihood on their earnings from this occupation; such earnings may, however, not exceed £250 annually.

Disability Provided For.

The insurance is intended to provide for inability to work due to some specific disease, or bodily or mental disablement; the pecuniary relief commences with the fourth day of such incapacity, while the medical relief is available from the beginning of sickness. There are two types of disability recognized by the law; first, that usually known as temporary disability; second, that usually termed invalidity. The first is expected to include cases lasting less than six months in a year, and the second, cases of longer duration or even permanent total disability. The system is therefore a combined sickness and invalidity insurance system. The presence of the invalidity feature is responsible for the complicated financial arrangements of the system. Accidental injuries which receive benefits under the Workmen's Compensation Act are not usually included, but disability due to other accidents not covered by the compensation act does entitle to benefits, unless by some legal process compensation or damages equal to or in excess of the regular benefits is secured.

The carriers of the insurance may themselves take steps to secure such compensation or damages.

For the women included in the insurance, provision is made for inability to work on account of childbirth. The uninsured wife of an insured man also receives this benefit.

The Benefits.

The benefits provided by the insurance are divided into two groups—those administered by the insurance committees and those by the “approved societies.”

The insurance committees have charge of: 1. Medical benefit; 2. Sanatorium benefit. The approved societies have charge of cash benefits, as follows: 3. Sickness benefit; 4. Disablement benefit; 5. Maternity benefit; 6. Additional benefits. It will be noted that there is no funeral benefit.

(1) *Medical benefit*.—This consists of such medical treatment as can consistently with the best interests of the patient be properly undertaken by a general practitioner of the usual professional skill. It also includes the provision of medicines and of such medical and surgical appliances as are approved by the regulations issued by the insurance commissioners—that is, by the Ministry of Health. As soon as a person is accepted as a member by an approved society this benefit becomes available without any waiting period. The benefit must be provided immediately on the beginning of the disability.

Voluntary contributors are entitled to medical benefit in the same manner as the regular contributors, but if their annual income exceeds a certain amount, no right to this benefit exists. Their dues, however, are reduced 1 penny weekly.

In the rare cases where the insurance authorities are satisfied that the insured persons in any area are not receiving adequate medical service, they may make special arrangements to provide such service, or they may allow the beneficiaries to provide themselves with service and pay them for the cost of it.

(2) *Sanatorium benefit*.—This consists of treatment in a sanatorium or in a similar institution, or at home, to insured persons suffering from tuberculosis or such other diseases as may be designated by the Ministry of Health (formerly by the Local Government Board). At the present time this benefit is practically a tuberculosis benefit.

(3) *Sickness benefit*.—This consists of a periodical payment to insured persons rendered incapable of work by some specific disease or by bodily or mental disablement of which notice has been given,

commencing on the fourth day of such incapacity and continuing for a period not exceeding 26 weeks. If the disability continues longer than 26 weeks, the disablement benefit (described below) begins. These two benefits cease when the age of 70 is reached, as the old-age pension begins at that age. Sickness benefit is not paid in maternity cases. As some supervision of the beneficiary is required, the sickness benefit is not paid while the patient resides outside of the United Kingdom.

If this benefit is drawn for a period of 26 weeks, application for benefit for another case of sickness will be approved only when at least 12 months have elapsed from the date of last receipt of benefit.

The societies are authorized to refuse or suspend the benefit, if the sickness was caused by misconduct or if recovery is delayed by failure to observe the rules.

The "ordinary" rate of sickness benefit is 10 shillings per week for men and 7 shillings 6 pence per week for women. These rates apply to persons who took out insurance on or before October 13, 1913; those entering after this date are termed "late entrants" and receive lower benefits as described below.

The sickness benefit is payable only after the contributor has been insured 26 weeks and has paid 26 contributions. If a person ceases to be insured and then later again becomes an employed contributor, a waiting period is again required; as the law expresses it "he shall be treated as if he had not previously been an insured person."

The class of insured persons known as "late entrants," i. e., those who became insured after October 13, 1913, are temporarily entitled to reduced benefits only. Until a late entrant has been insured for 104 weeks and has paid that number of weekly contributions, the rates of benefit are: For men, 6 shillings per week; for women, 5 shillings per week.

(4) *Disablement benefit*.—This consists of a periodical payment in case of a disease or disablement which has exhausted the sickness benefit. The rate is 5 shillings per week for men and women alike and continues for the duration of the disablement. A waiting period of 104 weeks, for which a like number of contributions has been paid, is required. The benefit begins on the day after sickness benefit has been exhausted.

(5) *The maternity benefit*.—This consists of a sum of money, payable after contributors have been insured 42 weeks (formerly 26 weeks). An insured man is entitled, on the confinement of his wife, to receive from his society the sum of 30 shillings, the benefit being the wife's property. If the wife is also insured, she is entitled to receive from her society a further sum of 30 shillings, making in all

60 shillings. In order not to place in an unfavorable position the insured woman whose husband is not insured, the double benefit of 60 shillings is paid to her also, in this case the whole amount coming from her society. An unmarried woman is entitled, on confinement, to a benefit of 30 shillings.

The maternity benefit does not carry with it the right to any medical attendance or medicines, nor may the insured woman receive any sickness benefit for four weeks after the date of confinement, unless there is some disease or disablement not connected directly or indirectly with the confinement. However, the model rules issued by the commissioners state "a woman in respect of whom this benefit is payable must be attended in her confinement by a duly qualified medical practitioner or by a midwife possessing the prescribed qualifications."

The 30 shillings benefit paid in respect of a wife's insurance, carries with it the obligation to abstain from remunerative employment for four weeks after the confinement.

In order to make sure that the maternity benefit reaches the widest possible group of insured women, it is payable even though the woman has already exhausted her 26 weeks of sickness benefit or even if she has been suspended from sickness benefit on account of arrears. Similarly, even if the husband is in arrears or is otherwise disqualified, the wife's society must pay the 60 shillings benefit.

An additional aid in maternity cases is provided by section 10 (4) b of the act of 1911, under which no regard is to be taken of arrears of contributions during the two weeks before and four weeks after confinement in the case of an insured married woman. This is equivalent to exemption from contributions for these six weeks.

(6) *Additional benefits.*—Section 37 of the 1911 act provides that where the actuarial valuation of an approved society shows that there is a surplus over liabilities, the society may provide, for its members and their dependents, certain additional benefits. The fourth schedule appended to the 1911 act gives a list of the permissible extensions of benefits. These may be summed up as consisting of increases in the ordinary benefits, especially in cases where a member has dependents, an addition to the old-age pension provided by the act of 1908, grants to members in distress, etc. But no part of such a surplus may be used to pay a funeral benefit.

As the annual reports of the insurance commissioners make no mention of the societies taking any steps in this direction, it may be inferred that none have been instituted. The original act contemplated that such additional benefits could be generally provided after about 18 years of operation of the system, but the changes introduced by the act of 1918 postponed the date of such increases to about 35 years.

Sources of Income.

The funds of the insurance system are derived from three sources: (1) The contributions of the insured person; (2) the contributions of the employer; (3) grants from the national treasury.

Contributions.—The so-called “employed rate” is as follows: The contributions for men are 7 pence weekly, for women 6 pence weekly. This is divided as follows: The man pays 4 pence, the employer 3 pence; the woman pays 3 pence, the employer 3 pence. These rates, it will be noted, are “flat” rates, being uniform for the whole class of “employed contributors.”

“Employed contributors” form the great majority of the insured persons, but there are special groups of so-called “low-wage earners” for whom special provision is made. The rates for insured persons in this category (who must be 21 years of age or over and whose wages must not include board or lodging) are as follows:

RATES OF WEEKLY CONTRIBUTIONS FOR LOW-WAGE EARNERS.¹

Rate of pay per working day.	Amount contributed by—			
	Employer for—		Em- ployee.	Parlia- ment.
	Men.	Women.		
Not more than 1s. 6d.	<i>Pence.</i> 6	<i>Pence.</i> 5	<i>Pence.</i> Nothing.	<i>Pence.</i> 1
Over 1s. 6d. but not more than 2s.	5	4	1	1
Over 2s. but not more than 2s. 6d.	4	3	3	Nothing.

¹ Great Britain. The statutes relating to National Health Insurance. London, June, 1918. p. 69.

Arrears.—The provisions as to arrears are liberal, but are not easy to describe in brief. Arrears due to sickness or disablement and, in the case of woman members, due to maternity, are disregarded in making up the accounts. The general principle is that any loss which a society suffers by the nonpayment of a member's dues in one year shall be made good to the society by the reduction of his benefits in the following year. The arrears of one year are canceled in the next year, even if no benefit is claimed, so that the member in arrears makes, as it were, a fresh start each year. To avoid any reduction of benefits, a member may, at the end of a contribution year, pay off his arrears, but must do so not later than 13 weeks after the end of a contribution year. By the act of 1913, a member who wishes to pay off any arrears which arose during unemployment can do so by paying only that portion of his contribution which fell to his share and not that part which the employer would have paid.

Low-wage earners who are contributors must, in case of arrears, pay the State's contribution of 1 penny per week.

Financial Administration.

The finances of the system are based on a plan of level premiums; that is, the contributions are uniform for all ages regardless of the higher sickness and disablement rates in the older age groups. As this plan provides both sickness and invalidity insurance, the accumulation of a reserve is necessary. This combination makes the plan extremely involved and very difficult to present in brief form.

The weekly dues of 4 pence for men and 3 pence for women are paid by deductions from wages; the employer adds 3 pence to each of these amounts and affixes special stamps of the proper value to the card of the employee on the dates when wages are paid. The stamps are purchased from the post office, which deposits the receipts in the national health insurance fund. From this fund the money is drawn for the payment of benefits and for expenses of administration.

The portion of the expense defrayed by the National Government was, at the start, two-ninths of the cost of benefits and of administration for the men, and one-fourth of these expenditures for the women.

The cost of administration in the societies may not exceed 41 pence per member annually. If there is a deficiency in the administration account, an assessment must be levied on the members.

The rates of dues and the schedule of benefits of the system were computed on the basis of being self-sustaining for a person who entered the insurance at the age of 16; but for a person who entered at a later age the contributions were not considered to be sufficient to provide the benefits. The system thus began with a liability which was estimated as being £87,000,000. To cover this amount each person entering the insurance has credited to him a theoretical credit—called a “reserve value.” At the start this amount was to be made up by setting aside as a sinking fund a portion of the weekly dues of each contributor, as follows: For the men, one and five-ninths pence; for the women, one and one-half pence. By the act of 1918 the deduction in the case of women was made one and one-sixth pence. It was originally estimated that these deductions would cancel the “reserve values” at the end of a period of about 18 years; it is now believed that this period will be somewhat longer than that.

A special committee appointed in 1916 to make a study of the finances of the system reported that the funds available for women's benefits were inadequate, and recommended that part of the deductions just described should be devoted to current expenses. The

1918 law provided (sec. 1) that part of the sums should be applied to the accumulation of two special funds—the central fund and the contingencies fund; the central fund is to receive one-eighth and the contingencies fund seven-eighths “of a sum representing, in the case of men, four-ninths and in the case of women three-ninths pence for each weekly contribution paid in respect of a member of a society.”

The central fund is intended to meet any deficit arising out of an abnormal rate of sickness. It receives in addition to the above-mentioned sum, and the interest which has accumulated on it, a sum of £150,000 annually from Parliament.

In general it may be said that the purpose of the contingencies fund is to meet any deficit which appears when an actuarial valuation is made; however, the amounts apportioned to any one society belong to the credit of that society and may not be used to meet a deficit in any other society.

Besides these two funds, the 1918 act also creates a women's equalization fund, to be used in assisting societies in meeting their liabilities arising out of the sickness claims of women. It is distributed to the societies pro rata on the basis of the number of married woman members. It is understood that Parliament will grant each year in addition to its weekly contribution of 2 pence for each insured woman, the sum of £250,000 for this purpose. In general, it may be said that this fund is to meet the disabilities due to child-bearing.

General Administration.

The Ministry of Health Act of June 3, 1919, made a number of important changes in the administration of the insurance system. This act, as far as it applies to health insurance, is now in force and other powers are being added to it from time to time. The powers and duties of the new ministry include the supervision and administration of the entire insurance system.¹

The general organization of the health insurance system for England and Wales is shown in the following outline. A similar organization obtains for Scotland and for Ireland, where the Scottish insurance commissioners and the Irish insurance commissioners take the place of the insurance commissioners for England and Wales (now a subdivision of the Ministry of Health).

¹ A summary of the act is given in the MONTHLY LABOR REVIEW for August, 1919, pp. 227, 228. The text of the act is given in Public Health Reports, Oct. 10, 1919, pp. 2233-2241.

National Health Insurance Joint Committee.

Prior to June, 1919, the system was in the charge of four bodies known as insurance commissioners, there being one each for England, Scotland, Wales, and Ireland. Over these four boards was an organization composed of representatives of each, called the National Health Insurance Joint Committee, a federated body whose principal function was to take charge of all matters common to the four boards, especially the actuarial problems.

By the terms of the Ministry of Health Act, the joint committee will in the future be composed of the Minister of Health as chairman, the Secretary for Scotland, the Chief Secretary for Ireland, and one other person appointed by the minister to represent the Welsh insurance system. Except for this change of personnel, the previous constitution of the joint committee and its rights and duties are unchanged. All of the powers and duties formerly belonging to two of these bodies, the insurance commissioners for England and the insurance commissioners for Wales, are henceforth to be exercised by the Ministry of Health, and all their employees are transferred to the new ministry. The act specifically provides that it does not affect the powers and duties of the Irish insurance commissioners. The Scottish insurance commissioners also are not affected to any material extent.

The most important work carried on by the joint committee is that relating to the actuarial features of the insurance; this includes, for

instance, the calculation of the rates of contributions, reserve values, etc. An actuarial advisory committee has aided the joint committee since the commencement of the act.

Until the passage of the Ministry of Health Act, there was attached to the joint committee a special committee on medical research, to make special investigations on matters relating to any disease to which the insured persons are subject. The expense of these investigations is provided for by special appropriations by Parliament, the amount of 1 penny per insured person being granted. In the future this research committee is to be entirely independent of the insurance system.

Insurance Commissioners.

In the future, the administration will be divided into three parts, one for England and Wales, and one each for Scotland and Ireland.

The insurance commissioners (now a subdivision of the Ministry of Health), as the board for England has always been entitled, may be used as typical in describing the scope and organization of these bodies. The commissioners may appoint such officers, inspectors, and other employees as they see fit, subject to certain supervision of the higher authorities; they may sue and be sued and hold property. They have authority to issue regulations authorized by the insurance laws; they approve the statutes and supervise the administration of the approved societies.

The commissioners have an advisory committee to give advice and assistance in making regulations for the administration of the laws; this committee consists of representatives of the employers, of the approved societies, of the medical profession, and of such other persons as the commissioners may appoint, of whom at least two must be women. The advisory committee has a membership of about 150 persons, and a large proportion of the membership of the English committee consists of persons who are also members of the advisory committee of the National Health Insurance Joint Committee.

Approved Societies.

When the plans for the health insurance system were formulated, the United Kingdom was covered by a network of friendly societies, trade-unions, commercial insurance companies, sick clubs, establishment funds, and similar voluntary organizations which provided a variety of benefits for sickness, accidental injury, superannuation, etc. Many of these organizations had a long history of usefulness in providing relief for distress from these causes, and it was decided to use the societies as the carriers of the pecuniary benefits. The in-

insurance laws therefore provide that the insured persons shall group themselves into self-governing bodies—the organizations just named—which shall be responsible for the administration to their members of the pecuniary benefits provided by the system. These societies, if they meet the requirements of the law, are recognized by the insurance commissioners as “approved societies.” The general requirements are that the society shall be self-governing, not conducted for profit, and generally be in a position to carry out the provisions of the law. In order to permit any organization to continue such activities as are not covered by the law, the societies may have a special section for administering the provisions of the insurance acts, whose accounts must be kept separate from other activities. Special arrangements are made for federating societies whose membership is not large enough to provide an adequate basis to carry the risks of an influenza epidemic or similar tax on their resources. These societies were required to enact by-laws which were submitted to the commissioners for approval and which complied with the general scheme of administration. They could accept such members as they saw fit, except that they could not reject an applicant solely on account of age.

A person may not be a member of more than one society for the purpose of State insurance.

The principal functions of the approved societies are the payment of cash benefits, the keeping of records of the members, and the supervision of beneficiaries.

The distribution of the insured persons among the various types of approved societies is shown in the following table, which gives the membership in England in April, 1913, the latest date for which this information has been reported:

MEMBERSHIP OF APPROVED SOCIETIES OF SPECIFIED TYPE IN ENGLAND, FOR THE QUARTER ENDING APR. 13, 1913.¹

¹ Great Britain. National Health Insurance Joint Committee. Report for 1913-14 on the administration of the National Insurance Act (Cd. 7496), p. 498.

² The total number of members is the number of members whose contribution cards had been forwarded to the commission in time for use in making up its report.

Insurance Committees.

For each county and county borough of the United Kingdom there is a body called an insurance committee, which has charge of the medical and sanatorium benefits. The members of these committees in England and Wales are appointed by the Ministry of Health. The committees must be composed of not less than 40 nor more than 80 members, consisting of representatives of the insured persons, of the county government, of the medical profession, and other persons appointed by the Ministry of Health.

Each committee must make such arrangements with duly qualified medical practitioners in the county as will assure to the insured persons adequate medical attendance and treatment. The committee prepares a list of doctors who are willing to attend insured persons and this list, called the "panel," must be duly published. Usually it is displayed in each post office as well as distributed among the insured persons. Each of the latter may select from the panel the doctor whom he desires for his physician.

The committee must also prepare and publish lists of persons or firms who are willing to supply drugs, medicines, and appliances to insured persons in accordance with regulations made by the authorities. The committee must make in advance an agreement with the druggists ("chemists") as to the schedule of prices for drugs, etc., subject to the approval of the authorities.

The administration of the sanatorium benefit was originally in the hands of the committees entirely; later, special grants were made by Parliament to various local organizations engaged in combating tuberculosis, but since the enactment of the Ministry of Health law, all this work has been placed in charge of the ministry. Under the insurance law of 1911, the insurance committees are allowed 1 shilling 3 pence annually per insured person in their areas for the purposes of the sanatorium benefit. It is understood that Parliament will make special grants from time to time to promote the construction of sanatoriums for the use of the whole population. In 1911 the finance act provided for this purpose £1,500,000, which was distributed among the four countries on the basis of population. The local government authorities and the National Treasury each defray one-half of the deficit arising from the extension of this benefit to dependents of insured persons. This part of the original plan was modified by having the National Government's grant made directly to the local authorities in a given area, instead of to the insurance committee.

Under the present arrangement, therefore, the Ministry of Health has the per capita allowance from the national health insurance fund

in addition to grants from local government bodies and from the National Treasury for this purpose. Up to the end of 1917, in 32 of the 49 counties of England and in 55 of the 78 county boroughs of England, comprehensive agreements were in force between insurance committees and the local authorities, under which treatment in approved sanatoriums (for indoor patients) and the services of a tuberculosis dispensary organization for nonresident patients (including dispensary treatment and the services of a tuberculosis health officer for examining applicants for sanatorium benefit, advising as to the treatment, etc.) were provided for the insurance committee by the local authorities. In addition to the services just mentioned, most of the agreements provide for visiting and nursing services.

Under the plans above mentioned there has been a marked increase in the facilities available for tuberculosis treatment by the insurance committees. In June, 1914, the number of approved tuberculosis dispensaries was 255 and the number of beds in approved residential institutions was 9,200; in August, 1917, the dispensaries numbered 370 and the number of beds had increased to 11,700. This increase was made in spite of the many difficulties caused by the war.

Deposit Contributors' Fund.

As the societies could reject an applicant for any reason except age, it was expected that there would be a number of persons who, on account of ill health or other reason, could not obtain membership. For this group a special organization, "the deposit contributors' fund" (originally called the post-office fund), was created. It was expected that this fund would have close to a million members, but at the close of the year 1916, the number was only about 270,000.

The deposit contributors are entitled to such benefits as the sum to their credit will provide. They may, for instance, draw sickness benefit only until they have exhausted the amount standing to their credit. Such contributors are in a distinctly less favorable position than the regular contributors.

Operations of the System.

Three reports on the operations of the system have been published; one for the year 1912-13, one for 1913-14, and one for 1914-1917. This last report was printed in 1918, while the war was still in progress, and for reasons of public policy gave no data as to membership. The data in these reports are given separately for each of the four countries and not always in the same form for all countries. The

following table shows the total receipts and expenditures of the English national health insurance fund, 1912 to 1916:

RECEIPTS AND EXPENDITURES OF THE NATIONAL HEALTH INSURANCE FUND OF ENGLAND, 1912 TO 1916.¹

INDUSTRIAL RELATIONS.

Preliminary Statement of President's Industrial Conference.

ON November 20 the President announced the appointment of a group of seventeen to sit as an Industrial Conference, beginning December 1. This call was in accordance with the suggestion of the public group in the recent industrial conference summoned by the President in October.¹

The President's letter of appointment reads as follows:

In accordance with the suggestion given me by the public group of the recent industrial conference I am calling a new body together to carry on this vitally important work, and I trust you will give me the pleasure of naming you as one of its members.

Guided by the experience of the last conference, I have thought it advisable that in this new body there should be no recognition of distinctive groups, but that all of the new representatives should have concern that our industries may be conducted with such regard for justice and fair dealing that the workman will feel himself induced to put forth his best efforts, that the employer will have an encouraging profit, and that the public will not suffer at the hands of either class. It is my hope that this conference may lay the foundation for the development of standards and machinery within our industries by which these results may be attained.

It is not expected that you will deal directly with any conditions which exist to-day, but that you may be fortunate enough to find such ways as will avoid the repetition of these deplorable conditions.

The conference will meet at a place to be hereafter designated in this city on December 1 next.

The new Conference has been meeting in secret session. Its membership consists mainly of citizens prominent in public life, many of whom are well known in political circles. Hon. Wm. B. Wilson, Secretary of Labor, was made chairman, and Herbert Hoover, former Food Administrator, was elected vice chairman. The other members are Thomas W. Gregory, former Attorney General under President Wilson; George W. Wickersham, Attorney General in the Taft administration; Oscar S. Straus, Secretary of Commerce and Labor in the Roosevelt administration; Henry M. Robinson, former member of the Shipping Board and recently appointed a member of the Bituminous Coal Wage Commission; Prof. Frank W. Taussig, former chairman of the Tariff Commission; ex-Govs.

¹ For an account of this conference see MONTHLY LABOR REVIEW for November, 1919, pp. 40-49.

Samuel W. McCall (of Massachusetts), Martin H. Glynn (of New York), and Henry Carter Stuart (of Virginia); William O. Thompson, president of Ohio State University; George T. Slade, railway official of St. Paul, Minn.; Julius Rosenwald, president of Sears, Roebuck & Co., Chicago, Ill.; Owen D. Young, lawyer, vice president of the General Electric Co.; Henry J. Waters, president of the Kansas State Agricultural College; Stanley King, lawyer, secretary of the W. H. McElwain Co. (shoe manufacturers) and former assistant to the Secretary of War in handling industrial relations for that department; and Richard Hooker, of the Springfield (Mass.) Republican.

The preliminary statement of the Conference, which was issued on December 29, 1919, consists principally of an outline or proposal of a system of Federal administrative machinery for the adjustment of industrial relations. It omits any extended statement of industrial principles and theories, and its proposed machinery of adjustment does not displace or interfere with any existing machinery. Briefly the suggestions of the Conference provide for the establishment of a national industrial tribunal and regional boards of investigation and adjustment. If either or both sides to a controversy refuse to designate representatives, the tribunal may function as a board of inquiry under the chairman and four members of the panels set up. The tribunals and boards proposed function along geographical lines and not along lines of industry. The proposals of the Conference do not affect in any way industrial relations in the shop or the establishment, except in so far as appeal is made from the latter for the services of adjustment of the tribunal or regional boards.

The appointment of the members of the proposed tribunal and boards is concentrated in the hands of the President and the Senate.

"The plan which follows," the Conference states, "does not propose to do away with the ultimate right to strike, to discharge, or to maintain the closed or the open shop."

A part of the preliminary report of the Conference is a statement of its views as to the relation of public utility and Government employees to the proposed scheme of adjustment of industrial relations. In public utilities the Conference holds it essential that there should be "some merging of responsibility for regulation of rates and services and the settlement of wages and conditions of labor." It would deny to Government employees engaged in the administration of justice or the maintenance of public safety or order "to join or retain membership in any organization which authorizes the use of the strike or which is affiliated with any organization which authorizes the strike."

The report of the Conference is reproduced in full:

Preliminary Statement of Industrial Conference.

I. Introduction.

The Industrial Conference, convened by the President in Washington on December 1, issues this statement in the desire that certain tentative proposals be given considerate study by interested individuals and organizations throughout the country. It will reassemble on January 12 and will then carefully consider any constructive criticisms that may be submitted to it.

The Conference does not deem it useful at this time to enter upon a discussion of the causes of industrial unrest. It believes rather that its most important immediate contribution is the suggestion of practical measures which will serve to avert or postpone industrial conflicts.

In confining itself to the proposal of machinery for the adjustment of disputes, the Conference is far from wishing to exaggerate the importance of the mechanical as contrasted with the human elements in the situation. Our modern industrial organization, if it is not to become a failure, must yield to the individual a larger satisfaction with life. It makes possible a greater production of material things. But we have grown so accustomed to its complexity that we are in danger of forgetting that men are to-day more dependent on each other than ever before. The spirit of human fellowship and responsibility was easier to maintain when two or three worked side by side and saw the completed product pass from their hands. Yet their cooperation was actually less necessary because each by himself was more nearly capable, if circumstances demanded, to meet the needs of life. To-day we have a complex interweaving of vital interests. But we have as yet failed to adjust our human relations to the facts of our economic interdependence. The process toward adjustment, though slow, nevertheless goes on. The right relationship between employer and employee in large industries can only be promoted by the deliberate organization of that relationship. Not only must the theory that labor is a commodity be abandoned, but the concept of leadership must be substituted for that of mastership. New machinery of democratic representation may be erected to suit the conditions of present industry and restore a measure of personal contact and a sense of responsibility between employer and employee. The more recent development of such machinery with the cooperation of organized labor is a hopeful sign. But back of any machinery must be the power which moves it. Human fellowship in industry may be either an empty phrase or a living fact. There is no magic formula. It can be a fact only if there is continuous and sincere effort for mutual understanding and an unflinching recognition that there is a community of interest between employer and employee.

Pending the growth of better relationships between employers and employees, the practical approach to the problem is to devise a method of preventing or retarding conflicts by providing machinery for the adjustment of differences. The Conference believes that it is possible to set up a more effective series of tribunals for the adjustment of disputes than at present exists. To be successful, such tribunals must be so organized as to operate promptly as well as impartially. There must be full participation by employers and employees. There must be representation of the public to safeguard the public interest. The machinery should not be used to promote unfairly the interests

of organizations, either of labor or of capital. The plain fact is that the public has long been uneasy about the power of great employers; it is becoming uneasy about the power of great labor organizations. The community must be assured against domination by either. On the other hand, there must be equal assurance that such machinery will not be used to discriminate against organizations of employees or of employers. Both should be protected. The right of association on either side should not be affected or denied as a result of the erection of such tribunals.

The plan which follows does not propose to do away with the ultimate right to strike, to discharge, or to maintain the closed or the open shop. It is designed to bring about a frank meeting of the interested parties and cool and calm consideration of the questions involved, in association with other persons familiar with the industry.

The plan is national in scope and operation, yet it is decentralized. It is different from anything in operation elsewhere. It is based upon American experience and is designed to meet American conditions. To facilitate discussion, the plan submitted, while entirely tentative, is expressed in positive form and made definite as to most details.

II. Plan for boards of inquiry and adjustment.

1. *National tribunal and regional boards.*—There shall be established a National Industrial Tribunal, and Regional Boards of Inquiry and Adjustment.

2. *National Industrial Tribunal.*—The National Industrial Tribunal shall have its headquarters in Washington, and shall be composed of nine members chosen by the President and confirmed by the Senate. Three shall represent the employers of the country and shall be appointed upon nomination of the Secretary of Commerce. Three shall represent employees and shall be appointed upon nomination of the Secretary of Labor. Three shall be representatives of the public interest. Not more than five of the members shall be of the same political party.

The tribunal shall be, in general, a board of appeal. Its determinations on disputes coming to it upon an appeal shall be by unanimous vote. In case it is unable to reach a determination, it shall make and publish majority and minority reports which shall be matters of public record.

3. *Industrial regions.*—The United States shall be divided into a specified number of industrial regions. The Conference suggests 12 regions with boundaries similar to those established under the Federal Reserve system, with such modifications as the industrial situation may make desirable.

4. *Regional chairmen and vice chairmen.*—In each region the President shall appoint a regional chairman. He shall be a representative of the public interest, shall be appointed for a term of three years and be eligible for re-appointment.

Whenever in any industrial region, because of the multiplicity of disputes, prompt action by the Regional Board is impossible, or where the situation makes it desirable, the National Industrial Tribunal may in its discretion choose one or more vice chairmen and provide for the establishment under their chairmanship of additional regional boards.

5. *Panels of employers and employees for regional boards.*—Panels of employers and employees for each region shall be prepared by the Secretary of Commerce and the Secretary of Labor, respectively, after conference with the

employers and employees, respectively, of the regions. The panels shall be approved by the President.

At least 20 days before their submission to the President provisional lists for the panels in each region shall be published in such region.

The panels of employers shall be classified by industries; the panels of employees shall be classified by industries and subclassified by crafts. The names of employers and employees selected shall be at first entered on their respective panels in an order determined by lot.

The selection from the panels for service upon the Regional Boards shall be made in rotation by the regional chairman; after service the name of the one so chosen shall be transferred to the foot of his panel.

6. *Regional Boards of Adjustment.*—Whenever a dispute arises in a plant or group of plants which is not settled by agreement of the parties or by existing machinery, the chairman may on his motion, unless disapproved by the National Industrial Tribunal, and shall at the request of the Secretary of Commerce or the Secretary of Labor or the National Industrial Tribunal, request each side concerned in such dispute to submit it for adjustment to a Regional Board of Adjustment. To this end each side shall, if willing to make such submission, select within not less than two nor more than seven days, at the discretion of the chairman, a representative. Such selection shall be made in accordance with the rules and regulations to be laid down by the National Industrial Tribunal for the purpose of insuring free and prompt choice of the representatives.

When both sides shall have selected their representatives the chairman shall take from the top of the panels for the industry concerned, or in the case of employees for the craft or crafts concerned, names of employers and employees, respectively. The representatives selected by the two sides shall be entitled to a specified number of peremptory challenges of the names so taken from their respective panels. When two unchallenged names of employers and employees shall have been selected in this manner, they, with the chairman and the representatives selected by the two sides, shall constitute a Regional Board of Adjustment.

The appointment of representatives of both sides shall constitute an agreement to submit the issue for adjustment and further shall constitute an agreement by both sides that they will continue, or reestablish and continue, the status that existed at the time the dispute arose.

The Board of Adjustment so constituted shall proceed at once to hear the two sides for the purpose of reaching a determination. Such determination must be by unanimous vote. In case the board is unable to reach a determination the question shall, unless referred to an umpire as provided in section 9, pass upon appeal to the National Industrial Tribunal.

7. *Regional boards of inquiry.*—If either side to the dispute fails, within the period fixed by the chairman, to select its representative, the chairman shall proceed to organize a Regional Board of Inquiry. Such Regional Board of Inquiry shall consist of the regional chairman, two employers selected in the manner specified from the employers' panel, and two employees selected in like manner from the employees' panel and of the representative of either side that may have selected a representative and agreed to submit the dispute to the board. If neither side shall select a representative within the time fixed by the chairman, the Board of Inquiry shall consist of the chairman and the four panel members only.

Upon the selection of a representative, within the specified time, the side concerned shall be entitled to the specified number of peremptory challenges as

provided above. The representative shall have the right to sit on the Board of Inquiry and to take full part as a member of such board in the proceedings thereof.

The Board of Inquiry as so constituted shall proceed to investigate the dispute and make and publish a report, or majority and minority reports, of the conclusions reached, within 5 days after the close of its hearings, and within not more than 30 days from the date of issue of the original request by the chairman to the two sides to the dispute, unless extended on unanimous request of the board or the National Industrial Tribunal. It shall transmit copies of this report or reports to the Secretaries of Commerce and of Labor, respectively, and to the National Industrial Tribunal, where they shall be matters of public record.

8. *Transformation of the regional boards of inquiry into regional boards of adjustment.*—At any time during the progress of the inquiry at which both sides shall have selected representatives and agreed to submit the dispute for adjustment, the Board of Inquiry shall become a Board of Adjustment by the admission to membership on the board of such representatives. The side or sides which appoint representatives after the date fixed in the original request of the chairman shall, because of its delay, suffer a reduction in the number of peremptory challenges to which it otherwise would have been entitled.

The Board of Adjustment so constituted shall proceed to the determination of the dispute as though it had been organized within the period originally fixed by the chairman.

9. *Umpire.*—When a Regional Board of Adjustment is unable to reach a unanimous determination it may by unanimous vote select an umpire and refer the dispute to him with the provision that his determination shall be final and shall have the same force and effect as a unanimous determination of such Regional Board.

10. *Combination of regions.*—Whenever the questions involved in a dispute extend beyond the boundaries of a single region, the regions to which the dispute extends shall, for the purpose of such dispute, be combined by order of the National Industrial Tribunal, which shall designate the chairman of one of the regions concerned to act as chairman in connection with the dispute in question.

Two employer members and two employee members shall be chosen from the combined panels of the regions involved in the dispute, under rules and regulations to be established by the National Industrial Tribunal. The members representing the two sides to the dispute shall be chosen as in the case of a dispute in a single region.

A Regional Board of Inquiry or of Adjustment constituted for a dispute extending beyond the boundaries of a single region shall have the same rights and powers conferred upon a Regional Board for a single region.

11. *Effect of decision.*—Whenever an agreement is reached by the parties to a dispute or a determination is announced by a Regional Board of Adjustment, or by an Umpire, or by the National Industrial Tribunal, the agreement or determination shall have the full force and effect of a trade agreement, which the parties to the dispute are bound to carry out.

12. *General provisions.*—In connection with their task of inquiry and adjustment, the Regional Boards and the National Tribunal shall have the right to subpoena witnesses, to examine them under oath, to require the production of books and papers pertinent to the inquiry, and their assistance in all proper ways to enable the boards to ascertain the facts in reference to the

causes of the dispute and the basis of a fair adjustment. Provision shall be made by law for the protection of witnesses and to prevent the misuse of any information so obtained.

All members of the tribunal and boards heretofore described, including the chairman and vice chairman, shall be entitled to vote.

The President shall have the power of removal of the members of the tribunal and boards.

In the presentation of evidence to the tribunal and the boards each side shall have the right to present its position through representatives of its own choosing.

The Secretary of Commerce and the Secretary of Labor in making nominations for the National Industrial Tribunal and in preparing and revising the regional panels of employers and employees shall from time to time develop suitable systems to insure their selections being truly representative.

The National Industrial Tribunal, the Regional Boards of Adjustment, and the Umpires shall in each of their determinations specify the minimum period during which such determinations shall be effective and binding. In case of emergency a Regional Adjustment Board or the National Industrial Tribunal may, after hearing both sides, alter its determination by abridging or extending the period specified.

13. Special provisions.—The terms of office of members of the National Industrial Board shall be six years; at the outset three members, including one from each group, shall be appointed for a term of two years, three members for a term of four years, and three members for a term of six years; thereafter three members, one from each group, shall retire at the end of each period of two years. Members shall be eligible for reappointment.

The regional panels provided for in section 5 shall be revised annually by the Secretaries of Commerce and of Labor, respectively, in conference with the employers and employees, respectively, of each region.

14. Relation of boards to existing machinery for conciliation and adjustment.—The establishment of the National Industrial Tribunal and the Regional Boards described shall not affect existing machinery of conciliation, adjustment, and arbitration established under the Federal Government, under the governments of the several States and Territories or subdivisions thereof, or under mutual agreements of employers and employees.

Any industrial agreement made between employers and employees may, by consent of the parties, be filed with the National Industrial Tribunal. Such filing shall constitute agreement by the parties that in the event of a dispute they will maintain the status existing at the time the dispute originated until a final determination, and that any dispute not adjusted by means of the machinery provided through the agreement shall pass on appeal to the National Industrial Tribunal for determination, as in the case of a dispute submitted on appeal from a Regional Board.

III. Objects of plan.

The main objects of the above plan are to secure national coordination and to stimulate the formation of bodies for local adjustment. The requirement of unanimity of agreement has by experience in the United States proved remarkably successful and should assure such confidence that neither side can rightfully refuse to submit to adjustment. A precedent condition of such submission is that the interruption of production shall be delayed. The frank

meeting of the parties in controversy together with other men skilled in questions at issue always gives promise of settlement. On the other hand, refusal to submit to the board not only inaugurates a legal inquiry but also prejudices the obstinate party or parties in public opinion. Moreover, the fact that membership on the board of inquiry is available to either party or to the conflict singly would tend further to weaken the position of the other. When both parties join, the board at once becomes a Board of Adjustment, and conflict ceases by agreement until a determination is reached. -

IV. Statement as to public utility industries.

The plan here proposed presents greater difficulties in application to certain public utilities than to competitive industry. The continuous operation of public utilities is vital to public welfare. As the capital invested is employed in public use, so is the labor engaged in public service; and the withdrawal of either with the result of suspending service makes the people the real victim. While continuous operation of all utilities is conducive to the general convenience of the people, that of some of them is essential to their very existence. Of the latter class the railways are a conspicuous example and bear the same relation to the body politic as do the arteries to the human body. Suspension produces practical social and economic anarchy and may impose hardship even to the point of starvation upon large sections of the community. The interruption in such essential public utilities is intolerable.

The Conference believes that a plan of tribunals or Boards of Adjustment and Inquiry should be applied to public utilities, but in the adaptation of the plan two problems present themselves. First, governmental regulation of public utilities is now usually confined to rates and services. The Conference considers that there must be some merging of responsibility for regulation of rates and services and the settlement of wages and conditions of labor. Such coordination would give greater security to the public, to employee, and to employer. Second, is the problem whether some method can be arrived at that will avert all danger of interruption to service. These matters require further consideration before concrete proposals are put forward.

V. Statement as to Government employees.

The Government is established in the interests of all the people. It can be conducted effectively only by those who give to its service an undivided allegiance. The terms and conditions of employment in the Government service are prescribed by law. Therefore no interference by any group of Government employees, or others, with the continuous operation of Government functions through concerted cessation of work or threats thereof can be permitted.

The right of Government employees to associate for mutual protection, the advancement of their interests, or the presentation of grievances can not be denied, but no such employees who are connected with the administration of justice or the maintenance of public safety or public order should be permitted to join or retain membership in any organization which authorizes the use of the strike or which is affiliated with any organization which authorizes the strike.

The Conference is not now expressing an opinion upon the propriety of the affiliation of other classes of Government employees with organizations which authorize the use of the strike.

The principles above stated are not to be construed as inconsistent with the right of employees individually to leave the public service. It is, further, an essential part of the application of these principles that tribunals shall be established for prompt hearing of requests and prompt remedy of grievances. The legislation of the Nation, the States, and the municipalities should be improved in such a way as to prevent delay in hearings and to enable speedy action when there are grievances.

VI. Further work of the Conference.

On reconvening the Conference will continue its consideration of tribunals for the furtherance of industrial peace in general industry in the light of whatever criticisms and suggestions the publication of its tentative plan may call forth. It will receive reports of investigations that are being made for it. On the basis of such reports and of further study of these and the other subjects within its field, the Conference hopes that it may be able to contribute something more toward the better industrial relations described in the words addressed to it by the President when he called it into being—relations in which "the workman will feel himself induced to put forth his best efforts, the employer will have an encouraging profit, and the public will not suffer at the hands of either class." To this end it invites the cooperation of all citizens who have at heart the realization of this ideal of a better industrial civilization.

THE PRESIDENT'S INDUSTRIAL CONFERENCE.

PRICES AND COST OF LIVING.

Retail Prices of Food in the United States.

THE retail prices of 22 articles¹ of food combined showed an increase of 2 per cent in the United States on November 15, 1919, as compared with October 15, 1919. The increase in November as compared with the average for the year 1913 was 92 per cent, the same percentage of increase that was shown in August. These two months represent the greatest increase shown during the 6-year period.

Of the 44 articles for which comparison can be made during the month period, 22 increased in price. The articles which increased during the month from October to November were: Strictly fresh eggs, 13 per cent; onions and sugar, 10 per cent each; raisins, 9 per cent; butter, 6 per cent; storage eggs and prunes, 4 per cent each; canned salmon, fresh milk, and potatoes, 3 per cent each; rice and bananas, 2 per cent each; evaporated milk, oleomargarine, cheese, lard, Crisco, bread, flour, and macaroni, 1 per cent each; tea and coffee, less than five-tenths of 1 per cent.

Nut margarine, corn meal, rolled oats, corn flakes, Cream of Wheat, cabbage, canned peas, and canned tomatoes remained at the same price as in October.

The following articles decreased in price: Pork chops, 5 per cent; ham, 4 per cent; bacon, 3 per cent; round steak, plate beef, hens, navy beans, and oranges, 2 per cent each; sirloin steak, rib roast, chuck roast, lamb, baked beans, and canned corn, 1 per cent each.

The 22 articles combined showed an increase of 5 per cent for November, 1919, as compared with November, 1918.

The articles which increased during the year period, November, 1918, to November, 1919, were: Onions, 73 per cent; prunes, 64 per cent; coffee, 55 per cent; raisins, 44 per cent; rice, 26 per cent; potatoes, 18 per cent; sugar, 16 per cent; canned salmon and storage eggs, 14 per cent each; butter, 13 per cent; flour, 10 per cent; strictly fresh eggs, 9 per cent; fresh milk, cheese, and lard, 6 per cent each; tea, 5 per cent; bread, 4 per cent; and corn meal, 2 per cent. The articles which decreased were: Navy beans, 24 per cent; plate beef, 18 per cent; bacon, 13 per cent; chuck roast, 12 per cent; round steak and rib roast, 6 per cent each; lamb, 5 per cent; ham, 4 per cent; sirloin steak and pork chops, 3 per cent each; and hens less than five-tenths of 1 per cent.

¹ Sirloin steak, round steak, rib roast, chuck roast, plate beef, pork chops, bacon, ham, lard, flour, corn meal, eggs, butter, milk, bread, potatoes, sugar, cheese, rice, coffee, tea.

Trend in Retail Prices of 22 Food Articles, Combined, by Months.

THE chart on the opposite page shows the curve in the retail cost of 22 of the most essential foods¹ for the United States for each month from January, 1913, to and including November, 1919. The logarithmic chart is used because the percentages of increase or decrease are more clearly seen than on an arithmetic chart.² The chart is the result of an aggregate of actual prices so weighted that each commodity may have an influence equal only to its relative importance. The price of each commodity to be included in the aggregate for each month has been multiplied by a number representing the importance of that commodity in the average family consumption. These weighted products of the several commodities to be combined are added, and computed as percentages of the aggregate, similarly computed, for the year 1913. The resulting index numbers show the trend in the retail cost of the several articles combined.

¹ See note on page 69.

² For a discussion of the logarithmic chart, see article on Comparison of arithmetic and ratio charts, by Lucian W. Chaney, MONTHLY LABOR REVIEW for March, 1919, pp. 20-34. Also, The "ratio" chart, by Prof. Irving Fisher, reprinted from Quarterly Publications of the American Statistical Association, June, 1917, 24 pp.

TREND IN RETAIL PRICES OF 22 FOOD ARTICLES, COMBINED, FOR THE UNITED STATES, BY MONTHS, JANUARY, 1913, TO NOVEMBER, 1919. [AVERAGE FOR 1913=100.]

Since September, 1915, there has been a steady increase in the cost of these 22 articles of food. In December, 1918, the cost of these foods was 87 per cent above the 1913 average. In January, 1919, there was a slight decline. February prices declined 7 per cent, but from that date until June the prices advanced. In June there was a decline of less than five-tenths of 1 per cent. July prices increased 3 per cent. August prices showed a further increase of 1 per cent, which month became the high-water mark. In September, there was a decrease of 2 per cent; in October, a further decrease of two-tenths of 1 per cent; but in November, there was an increase of 2 per cent which brought the cost up to the previous high-water mark in August. Using the average cost in the year 1913 as the base, or 100, the relative figure representing the November cost was 192, or an increase of 92 per cent over the year 1913.

Retail Prices of Food in 50 Cities on Specified Dates.

Effort is made by the Bureau to secure quotations on similar grades of commodities in all cities. There are, however, some local customs which must be taken into consideration when any comparison is made of the prices in the different cities. The method of cutting sirloin steak in Boston, Mass.: Manchester, N. H.; Philadelphia, Pa.; Providence, R. I.; and Portland, Me., differs from that in other cities. The cut known as "sirloin" in these five cities would be in other cities known as "porterhouse." There is in these cities, owing to the methods of dividing the round from the loin, no cut that corresponds to that of "sirloin" in other cities. There is also a greater amount of trimming demanded by the retail trade in these cities than in others. This is particularly true of Providence, R. I. These, together with the fact that almost all the beef sold in these cities is of better grade, are the main reasons why the retail prices of beef in these cities are higher than in others.

AVERAGE RETAIL PRICES OF THE PRINCIPAL ARTICLES OF FOOD FOR NOV. 15

[The prices shown in the tables following are computed from imports sent monthly to the Bureau by retail

Comparison of Retail Food Costs in 50 Cities in the United States.

THE table following shows for 39 cities the percentage of increase or decrease in the retail cost of 22 food articles¹ combined, in November, 1919, compared with the average cost in the year 1913, in November, 1918, and in October, 1919. For 11 other cities, comparisons are given for the one-year and one-month periods. These cities have been scheduled by the Bureau at different dates since 1913.

The average family expenditure is based on the prices sent to the Bureau each month by retail dealers, and on the average family consumption of these articles in each city.

The amounts given as the expenditures in November, 1918, and in October and November, 1919, represent the amounts necessary to buy a year's supply of these 22 food articles when purchased at the average retail prices charged in the months specified. This method makes it easier to note the increase over the year 1913. The year 1913 has been selected for the comparison because it was the last year before the war when prices were normal.

No attempt should be made in this table to compare one city with another, as the average number of persons in the family varies according to the city, and these 22 food articles represent a varying proportion of the entire food budgets according to locality. This table is intended to show merely comparisons in the retail cost of these 22 food articles for each city. Effort is made to secure prices on similar grades of commodities in all cities. Local customs, however, must be taken into consideration. For example:

1. In Boston, Mass.; Fall River, Mass.; Manchester, N. H.; New Haven, Conn.; Portland, Me.; and Providence, R. I., very little fresh plate beef is sold, and prices are not secured from these cities for this article.

2. The cut of beef known as "sirloin" in Boston, Mass.; Manchester, N. H.; Philadelphia, Pa.; and Providence, R. I., would be known as "porterhouse" in other cities. In these four cities, owing to the method of dividing the round from the loin, there is no cut that corresponds to "sirloin" in other cities. There is also a greater amount of trimming demanded by the trade in these cities.

3. The most of the sales in Newark, N. J., are on whole ham instead of the sliced, as in other cities.

While it is advised that comparisons should not be made as between cities, without taking these and other facts relative to local

¹ Sirloin steak, round steak, rib roast, chuck roast, plate beef, pork chops, bacon, ham, lard, hens, flour, corn meal, eggs, butter, milk, bread, potatoes, sugar, cheese, rice, coffee, and tea.

customs and transportation into consideration, the figures do represent a trend in the retail cost of these articles to the average family in each city.

RETAIL COST OF 22 FOOD ARTICLES¹ COMBINED, IN NOVEMBER, 1919, COMPARED WITH THE COST IN OCTOBER, 1919, NOVEMBER, 1918, AND WITH THE AVERAGE COST IN THE YEAR 1913, BY CITIES.

¹ See footnote on p. 90.

² Cost of year's supply at prices charged in specified month.

³ Decrease.

⁴ Decrease of less than five-tenths of 1 per cent.

⁵ Increase of less than five-tenths of 1 per cent.

As may be seen in the table, the average family expenditure increased in November in all but 2 of the 50 cities. In New Orleans and Louisville, the decrease was less than five-tenths of 1 per cent. In Newark, Peoria, and Washington, the increase was less than five-tenths of 1 per cent. In 10 cities the expenditure increased 1 per cent, each; in 18 cities, 2 per cent, each; and in 10 cities, 3 per cent, each. In Birmingham, Memphis, Houston, New York, and Portland, Me., the increase was 4 per cent; in Dallas, 5 per cent; and in Mobile, 7 per cent. During the year period, from November, 1918, to November, 1919, Minneapolis showed the greatest increase, or 11 per cent. Three cities decreased as compared with a year ago, as follows: Baltimore, 2 per cent; Newark, 1 per cent; and New Haven, less than five-tenths of 1 per cent. As compared with the year 1913 the cities showing an increase of 100 per cent and over were as follows: Washington, 100 per cent; Richmond, Detroit, and Charleston, 101 per cent, each; Memphis, 102 per cent; and Birmingham, 104 per cent.

Index Numbers of Wholesale Prices in the United States.

WHOLESALE prices in the United States reached new high levels in November, the Bureau's weighted index number standing at 230 as compared with 223 for October, an increase of 3 per cent. Marked increases occurred in the groups of farm products, food, etc., cloths and clothing, and house-furnishing goods, the index numbers rising from 230 to 240, from 211 to 219, from 313 to 325, and from 264 to 299, respectively. Smaller increases were shown in the metals and metal products, lumber and building materials, and chemicals and drugs groups. On the other hand, the index number for fuel and lighting decreased from 181 to 179, while that for the miscellaneous group remained unchanged.

Among the important commodities whose wholesale prices averaged higher in November than in October were cotton, grains, alfalfa hay, cattle, tobacco, butter, cheese, coffee, eggs, salmon, rye and wheat flour, apples, corn meal, fresh beef, mutton, molasses, oleo-margarine, oleo oil, rice, tea, onions, potatoes, cotton and woolen goods, silk, anthracite coal, coke, crude and refined petroleum, iron and steel products, spelter, brick, pine lumber, turpentine, rosin, shingles, sulphuric acid, glycerin, alum, grain and wood alcohol, caustic soda, tableware, household furniture, bran, and cotton-seed meal. Timothy hay, hides, hogs, poultry, beans, buckwheat flour, lemons, oranges, prunes, lard, hams, lamb, veal, tallow, ingot copper, linseed oil, cottonseed oil, and jute were lower in November than in October, while sheep, canned goods, codfish, herring, mackerel,

raisins, glucose, milk, salt, sugar, vinegar, shoes, carpets, leather, gasoline, matches, plate and window glass, lime, cement, putty, paper, rope, rubber, soap, and wood pulp were practically unchanged in price.

Comparing prices in November, 1919, with those of a year ago, it is seen that the index number for farm products increased from 221 to 240, that for food articles from 206 to 219, and that for cloths and clothing from 256 to 325. During the same time the index number for fuel and lighting increased from 171 to 179, that for lumber and building materials from 164 to 236, and that for house-furnishing goods from 226 to 299. The index number for miscellaneous commodities, including such important articles as cotton-seed meal and oil, jute, malt, lubricating oil, newsprint paper, rubber, starch, soap, plug tobacco, and wood pulp increased from 203 to 220, while that for metals and metal products decreased from 188 to 164 and that for chemicals and drugs from 215 to 176 in the same period of time.

¹ Preliminary.

Comparison of Retail Price Changes in the United States and Foreign Countries.

THE index numbers of retail prices published by several foreign countries have been brought together with those of this Bureau in the subjoined table after having been reduced to a common base, viz, prices for July, 1914, equal 100. This base was selected instead of the average for the year 1913, which is used in other tables of index numbers compiled by the Bureau, because of the fact that in some instances satisfactory information for 1913 was not available. For Denmark, Great Britain, Norway, Sweden, and the city of Rome, Italy, the index numbers are reproduced as published in the original sources. With one exception all these are shown on the July, 1914, base in the source from which the information is

taken. The index numbers for Rome are based on the first half of 1914. The index numbers here shown for the remaining countries have been obtained by dividing the index for July, 1914, as published, into the index for each month specified in the table. As shown in the table, the number of articles included in the index numbers for the different countries differs widely. These results should not, therefore, be considered as closely comparable one with another. In one or two instances the figures here shown are not absolutely comparable from month to month over the entire period, owing to slight changes in the list of commodities included at successive dates.

Retail Price Changes in Great Britain.

THE following table gives for Great Britain the increase in the cost of food and general family expenditure for January to December, 1919, over July, 1914. The food items included in this report are: Ribs and thin flank of beef, both British and chilled or frozen; legs and breast of mutton, British and chilled or

frozen; bacon, fish, flour, bread, tea, sugar, milk; butter, fresh and salt; cheese, margarine, eggs, and potatoes.

The table gives percentages of increase, and is not one of relative prices, as is the table given for the United States. When making comparisons this should be borne in mind, and to obtain the relative price it is necessary to add 100 to the percentage as given, i. e., January, 1919, the increase is 130, the relative price being 230.

The figures represent two comparisons:¹ First, the increase in price based on the same quantities as used in July, 1914; second, the increase in the cost of living, based on the change in the quality of the standard of living. In other words, the increase in column one of the table shows what the wage earner paid for the same quantities of food, while the figures in column two give the change that results from a substitution of one kind of food for another to meet wartime conditions.

The same method is used in family expenditures, the third column showing percentage of increase of all articles and the last column giving approximate figures, based on the increase in cost of all other articles and the estimated changed consumption of food.

PER CENT OF INCREASE IN FOOD AND ALL ITEMS IN GREAT BRITAIN, NOVEMBER, 1914, 1915, 1916, 1917, AND 1918, AND JANUARY TO DECEMBER, 1919, AS COMPARED WITH JULY, 1914.

Changes in Cost of Living in the United States, 1913, to October, 1919.

THE following table is an estimate, made by the Bureau of Labor Statistics, of the average increase in the cost of living in the United States since 1913. The Bureau has not complete retail price data back to 1913 and it has taken the average increase in the prices of the different groups of items for a number of industrial centers for the period from December, 1914, to June, 1919. While it is not held that the prices in these industrial centers necessarily agree with prices in every section of the country, yet the experience of the Bureau goes to show that the *changes* in prices in the industrial centers used are fairly representative of changes in the country generally except as to rents.

From data relating to food prices and to the *wholesale* prices of other groups of commodities, the changes from 1913 to December, 1914, and from June, 1919, to October, 1919, have been computed and the increases for these periods added to those from December, 1914, to June, 1919. The final results are shown in the table.

Rents are a purely local matter and changes in rents in a given locality can be obtained only by a special study in that locality. However, the percentage of increase in rents as well as in the other groups of items in the industrial centers mentioned have been applied to the increase shown in this table.

The first column in the table shows the average per cent of total expenditure that is devoted to the different groups of items—food, clothing, etc. This per cent is based on figures obtained from over 12,000 families in 92 localities, in a careful survey of the cost of living recently made by the Bureau. The second column shows the average per cent of increase in the prices of the several groups from 1913, to October, 1919. The third column is the product of the first and second columns and shows the per cent of increase applied to the total family budget. To illustrate: 38.2 per cent of the total expenditure goes for food; food costs have increased 80.7 per cent; this makes the per cent of increase in the price of food, as related to the total family expenditure, 30.8 per cent.

ESTIMATED PER CENT OF INCREASE IN COST OF LIVING IN THE UNITED STATES FROM 1913 TO OCTOBER, 1919.

Changes in Cost of Living in the District of Columbia.

PRICES recently secured by the Bureau of Labor Statistics show that the cost of living in the District of Columbia increased 88.4 per cent from 1913 to November, 1919. The increase from April, 1919, to November, was 8.0 per cent. For the longer period named, the changes in the several groups of items entering into the family budget ranged from 3.4 per cent for housing to 156.7 per cent for furniture and furnishings.

The following table shows the per cent that the average expenditure for each group of items is of the average total expenditure per family, and the per cent of change in prices for each group and for all items from 1913 to December of each year from 1914 to 1918, inclusive, and to April and November, 1919. It also shows the increases from April to November, 1919. The latter figure, 8.0, does not agree with the per cent that would be derived from a computation based on the figures shown for April and November, respectively. The explanation of this is that the column showing the increase from April to November is based on the prices of comparable articles at these two dates. Articles that were not on sale at *both* dates were not used. On the other hand, the figures comparing November, 1919, with December, 1914, have been derived by comparing November, 1919, prices with December, 1918, prices, without reference to April prices, so that a direct comparison between the two columns, April 1919, and November, 1919, should not be made.

CHANGES IN COST OF LIVING IN WASHINGTON, D. C., FROM 1913 TO NOVEMBER, 1919.

Production, Cold-Storage Holdings, and Wholesale and Retail Prices of Butter and Cheese.

By ELMA B. CARR.

THE preservation of food from seasons of greatest production to seasons of scarcity should tend to make prices more uniform throughout the year. It not only takes care of an over-supply, preventing waste, but it provides a supply in seasons when certain foods, in the fresh state, could be had only in small quantities, if at all.

In this article an attempt is made to show the relation between the amount of butter and cheese in cold storage, the amount produced, and the trend in wholesale and retail prices.

The wholesale prices shown are those compiled each month by this Bureau from weekly quotations published in the Chicago Dairy Produce. The retail prices are averages computed from reports sent to this Bureau each month by retail dealers in Chicago.

Figures showing production and cold-storage holdings have been taken from monthly statements of the Bureau of Markets of the Department of Agriculture. Figures giving production prior to 1918 are not available. Figures showing cold-storage holdings represent the amounts held in cold-storage warehouses on the first of each month. Figures showing receipts, or the movement into storage, and deliveries, or the movement out of storage, are not available prior to September, 1919. Although prior to this date it is not known just how much butter was received or delivered by cold-storage warehouses during each month, the difference between the holdings on the first of any month and the holdings on the first of the following month does represent the net amount stored or withdrawn from storage during the month.

Figures showing exports and imports are taken from monthly statements of the Bureau of Foreign and Domestic Commerce of the Department of Commerce.

By adding to the total production for each month, the amount held in storage and the amount imported, and subtracting the amount exported and the amount held in storage on the first of the next month, the amount available for consumption during each month has been computed.

Creamery Butter.

The storage season for butter may be said to begin in May and end in April. Storage holdings are increased during May, June, July, and August, and hence these months are known as "storing months." Storage holdings are decreased during the months from September to April, inclusive. These months are known as "distributing months." September is sometimes a storing month if the season is late. The largest amount held in storage on the first of any month during a season is known as the "peak load" for the season. As shown in Table 1, about three-fourths of the peak load is stored during June and July; most of the distribution is within the months of October to March, inclusive. About one-fourth of the peak load is usually withdrawn during December. Table 1 shows, also, the percentage of the peak load that was on hand from the previous season and the percentage that was carried over into the following season.

¹ Figures taken from Bulletin No. 776 of the Bureau of Markets, Department of Agriculture.

² Computed from monthly reports of the Bureau of Markets.

³ Per cent of increase.

The 1919-20 season will not be completed until May 1, 1920, but figures are given in Table 2 which show the amount of creamery butter produced each month since January, 1918, the total cold-storage holdings on the first of each month, and the monthly net increase or decrease in storage holdings since August, 1916. Table 2 shows, also, the amount of butter exported, imported, available for consumption, and wholesale and retail prices in Chicago each month since August, 1916.

The relation between the amount of butter produced, the amount in storage, the amount available for consumption, and wholesale prices is shown also in the chart on page 103 for each month, January, 1918, to June, 1919. Later figures are not shown because no further information is available for production. For the same reason, figures prior to January, 1918, were not charted. The production figures given in Table 2 for July, August, and September are only pre-

liminary and are subject to change. The information as shown in the chart, however, covers an entire storage season.

¹ Figures from Bureau of Markets, Department of Agriculture. Figures showing production prior to 1918 not available.

² Number of pounds in storage on the first of each month. Figures from Bureau of Markets.

³ During the month. Export figures do not include any amount sent in Army transports. Only the amount sent in merchant vessels is included.

⁴ The amount available for consumption equals total production, plus storage at beginning of month, plus imports, minus exports, minus storage at end of month.

⁵ The wholesale prices shown are those compiled each month by the Bureau of Labor Statistics from weekly quotations published in the Chicago Dairy Produce.

⁶ The retail prices are averages computed from reports sent to the Bureau of Labor Statistics each month by retail dealers in Chicago.

⁷ From preliminary reports of Bureau of Markets, Department of Agriculture, and subject to change.

⁸ Information not yet available.

On May 1, 1917, at the beginning of the 1917-18 season, there were a little over 2½ million pounds in storage. During the months from May to October storage holdings showed a net increase of a little

over 103½ million pounds. The average wholesale price for these months was 39.5 cents. During June and July the net amount stored was almost 77½ million pounds. The average wholesale price for these two months was 37.9 cents. From October 1 to May 1, 1918, there

was a net withdrawal from storage of 96 million pounds. The average wholesale price during these months was 45.5 cents. In December there was a net decrease in storage holdings of 30 million pounds. The average wholesale price in December was 48.1 cents. During the storing months of this season, exports of butter totaled a little over 2 million pounds and imports about 419 thousand pounds. During the distributing months, exports totaled over 14½ million pounds and imports almost 1½ million.

By proclamation of July 9, 1917, the export of butter was prohibited except by virtue of a special license. Butter was included in the presidential license proclamations of October 8, 1917, and January 10, 1918. Butter was in the list of restricted imports, April 22, 1918.¹

During the period from May, 1917, to April, 1918, the average differential between wholesale and retail prices was 5 cents.

Storage Season 1918-19.

On May 1, 1918, at the beginning of the 1918-19 season, there were a little over 10 million pounds in storage. During the months from May until September, storage holdings showed a net increase of slightly over 91 million pounds.

The total production from May until September was 372½ million pounds. The average wholesale price for these months was 42.9 cents. During June and July the net increase in storage holdings was 76 million pounds. The total production for these two months was approximately 202 million pounds. The average wholesale price for these two months was 42.6 cents. The movement into storage of such a large proportion of the amount produced no doubt prevented a glutted market and a consequent decline in price. From September until May, 1919, there was a net withdrawal from storage of 92 million pounds. The average wholesale price for these months was 58.7 cents. During December there was a net withdrawal of a little more than 20½ million pounds. The average wholesale price in December was 67 cents.

Creamery butter was included in the export conservation list of May 17, 1918.¹ During the storing months, from May to September, exports totaled 2½ million pounds and imports 40 thousand pounds. During the months of distribution, September to May, 1919, exports totaled 31½ million pounds and imports 2½ million.

On August 28, 1918, there was commandeered for the use of the Army, Navy, and Allies, between 25 and 30 million pounds of cream-

¹ War Industries Board, Bulletin No. 21, p. 16.

ery butter. The wholesale price for September showed an increase of 10 cents per pound and the retail price an increase of 9 cents, as compared with prices in August.

In October there was the largest amount exported since May. Production decreased approximately 8 million pounds; there was a net withdrawal from storage of 7 million pounds; the wholesale price advanced 1 cent. In November, 1918, the wholesale price increased 6 cents per pound and the retail price, 4 cents. Production was 18 million pounds less than in October, but there was a net decrease of almost 17 million pounds in storage holdings. Over 4½ million pounds were exported.

In December the wholesale price advanced another 6 cents, and the retail price 7 cents, although production was practically the same as in November, and there was a net decrease of 20 million pounds in the amount in storage. During December, however, 3 million pounds were exported.

The wholesale price for January, 1919, was 62 cents; for February, 49 cents; and for March, 60 cents. The amount produced in February was almost 7 million pounds less than in January. During February, however, there was a net decrease in cold storage holdings of 12½ million pounds, which was greater by 5 millions than the net decrease during January. The Creamery Journal,¹ in commenting on the drop in prices in February and the advance in March, states that in addition to an unusually heavy production in midwinter, which swamped the market and made selling difficult, the Government returned butter which was commandeered but which was said not to be up to quality. It further states that in March the Food Administration decided to take the commandeered butter, and much of it went to England, and that this, together with the fact that consumption increased in March, caused the market to advance. The Purchase, Storage, and Traffic Division, Quartermaster Corps, of the War Department has stated that when shipment overseas was suspended there was a surplus of some 5 million pounds of canned and commercial butter, which was then in storage. About 1½ million pounds of this was turned back to the manufacturers from whom it was bought and the balance was sold to dealers, and while some may have been exported by the dealers or manufacturers, and concerning which they would have no records, a great deal of it probably was retained in this country.

The wholesale price in April was 62 cents. During this month, storage holdings showed a net decrease of 2 million pounds, but over 8 million pounds were exported.

¹ Feb. 15, 1919.

During the season 1918-19, the average differential between the wholesale and retail price was 5 cents, approximately the same as for the 1917-18 season.

Storage Season 1919-20.

As previously stated, the 1919-20 season will not be completed until May 1, 1920, but as much information as is available at this time is given in Table 2. On May 1, 1919, at the beginning of the season, there were approximately 9½ million pounds in storage. During May, June, and July, 1919, production increased. From May until August there was a great decrease in the amount exported. Prices declined, but not so much as they probably would have done had these not been the months when the greatest amounts are put into storage.

Figures showing receipts, or the movement into storage, and deliveries, or the movement out of storage, are shown in the following statement for September, October, and November, 1919:

	Receipts.	Deliveries.
September.....	12, 520, 318	21, 908, 798
October.....	12, 885, 354	33, 892, 164
November.....	10, 141, 492	36, 558, 305

A noticeable feature in October and November is the large amount of butter imported. Of the total amount of 2,123,298 pounds imported in October, 2,118,151 pounds came from Canada. The next largest amount imported, 5,181 pounds, came from Denmark. In November, out of a total of 1,553,263 pounds imported, 1,539,792 pounds came from Canada and 13,471 pounds from Denmark.

The amount of butter exported during these two months was much less than during the same months of the previous year. In November, 1919, the amount imported was 344,367 pounds more than the amount exported.

The wholesale price in November was about 8 cents higher and the retail price about 9 cents higher than in November, 1918.

In December, 1919, the wholesale price was only 1 cent higher and the retail price only 2 cents higher than in December, 1918.

Table 3 shows comparisons over two storage seasons, May, 1917, to April, 1918, and May, 1918, to April, 1919. Table 4 gives information for the first six months of 1918 and 1919 similar to that given in Table 3, by seasons.

TABLE 3.—COMPARISON OF PRODUCTION, STORAGE HOLDINGS, EXPORTS, IMPORTS, AMOUNT OF CREAMERY BUTTER AVAILABLE FOR CONSUMPTION, BY SEASONS, MAY, 1917, TO APRIL, 1918, AND MAY, 1918, TO APRIL, 1919.

The following table shows the per cent of the total stocks of butter held by creameries, retail dealers, wholesale dealers, meat packers, cold-storage houses, and by miscellaneous dealers. This information, published in Food Surveys of the Department of Agriculture, is available for January and July, 1918, and for January, 1919. The information was secured and the paper published as a war-time emergency, and was discontinued after July 1, 1919. The table is given here to show that the proportion of the total commercial stocks held by the different groups was fairly constant, with the exception of that held by meat packers, which, in January, 1919, was more than double the proportion held by this group in January, 1918.

TABLE 5.—PER CENT OF TOTAL STOCKS OF CREAMERY BUTTER HELD BY CREAMERIES, COLD STORAGE WAREHOUSES, WHOLESALE DEALERS, RETAIL DEALERS, AND BY MISCELLANEOUS DEALERS, JANUARY AND JULY, 1918, AND JANUARY, 1919.

American Cheese.

The storage season for cheese is not so clearly defined as that for butter. It may be said to begin either in May or June and end in April or May. In this article the storage season has been taken as beginning in May, although in both May, 1917, and May, 1918, over 2 million pounds net were withdrawn from storage.

An exceptionally large quantity of American cheese was placed in cold storage during the 1917-18 season. At the beginning of the season there were approximately 7½ million pounds in storage. This was reduced during May by a net withdrawal of almost 3 million pounds. There was an increase each month from June to October in the amount in storage. On October 1 there were 92 million pounds in storage. This amount represents the peak load of the season. From this date until the end of the season the net withdrawal from storage was almost 68 million pounds. The average wholesale price during the months when more cheese was being stored than was being withdrawn was 22 cents and during the months when more was being put upon the market than was being stored was 23 cents.

On May 1, 1918, at the beginning of the 1918-19 season, there were 24½ million pounds in storage. A net withdrawal of 2 million

pounds was made during the month of May. During June, July, and August almost 111 million pounds were produced. During these months a net amount of 34 million pounds was stored. The average wholesale price during these months was 23 cents. In September there was a reduction of approximately 4½ million pounds in production and, although there was a net withdrawal of 14½ million pounds from storage, the price advanced to 28 cents. December shows the lowest production, with a net release from storage of 5½ million pounds. The price in December was 35 cents. In February, 1919, the price dropped 10 cents per pound, gradually rising to 30 cents in May.

On May 1, 1919, at the beginning of the 1919-20 season, there were only 6½ million pounds in storage warehouses. To this sum was added a net increase of 70 million pounds during May, June, July, and August. A net sum of 50 million pounds of this amount was put in during June and July. The average wholesale price for these months was 31 cents. The July price was the highest since January, when the price was 36 cents.

The passage of cheese through trade channels is more difficult to follow than that of butter, but the following tables and the chart are given in order to show as nearly as it is possible to show it what influence factors affecting the supply have upon the trend in prices.

TABLE 6.—MONTHLY PER CENT OF INCREASE OR DECREASE IN STORAGE HOLDINGS OF AMERICAN CHEESE, BASED ON THE PEAK LOAD FOR EACH SEASON, MAY, 1907, TO APRIL, 1919.

Export Figures.

The export figures used in this article in Tables 2, 3, and 4 for butter and in Tables 7, 8, and 9 for cheese have been those published by the Bureau of Foreign and Domestic Commerce of the Department of Commerce. These figures include only the amount of butter or cheese exported in merchant vessels. While Table 11 shows that the total amount of both butter and cheese exported during the 12 months ending June 30 of each year, 1913 to 1919, has greatly increased in the 6 years, this table and the figures in the tables referred to above take no account of the amount of butter that was sent out of the country during the period of the war on army transports. The amount sent on army transports, however, may be considered as supplying home needs, as all of this amount so sent was used for our own soldiers, with the exception of 4,970,000 pounds purchased by the French Government. However, in Table 12 is given the monthly amount of butter sent on army transports from June, 1917, to May, 1919. This information has been furnished by the Transportation Service, Quartermaster Corps, of the War Department. Similar information for cheese is not available, by months. However, the Subsistence Division of the Quartermaster Corps, War Department, has stated that the total amount of cheese exported in army transports during 1918 was 371,252 pounds, and that the total amount from January 1 to May 1, 1919, was 3,842,719 pounds, making a total since the beginning of 1918 of 4,213,971 pounds.

Cost of Living in Germany, 1916 to 1918.

SUPPLEMENT 21 to the bulletin of the German Bureau of Labor Statistics contains the results of an investigation into the cost of living of German urban families made by the war committee on consumers' interests.¹ The investigation covers the month of April, 1918. It was preceded by three investigations covering April and July, 1916, and April, 1917. The results of the first two investigations were discussed in detail in the MONTHLY LABOR REVIEW of March, 1918 (pp. 13-28), and a brief account of the general results of the third investigation was given in the MONTHLY LABOR REVIEW of February, 1919 (pp. 602-603). Owing to lack of space only a brief comparison of the general results of the first, third, and fourth investigations can be given here.

The investigation of April, 1918, having covered families of the same income classes as the investigations of April, 1916 and 1917, the general results of these three investigations are comparable. The average expenditures in April, 1918, per unit of consumption for food, rent, clothing, fuel, light, and miscellaneous items, as compared with the same kind of expenditures in April, 1916 and 1917, are shown in the following table:

¹ Statistisches Reichsamt, Abteilung für Arbeiterstatistik. Beiträge zur Kenntnis der Lebenshaltung im vierten Kriegsjahre. (21. Sonderheft zum Reichs-Arbeitsblatt.) Berlin, 1919.

AVERAGE EXPENDITURES OF GERMAN URBAN FAMILIES PER UNIT OF CONSUMPTION, APRIL, 1916, 1917, AND 1918.¹

¹ Owing to the greatly depreciated value of the mark, conversions into United States money are not made in this table. Normally the value of the mark is 23.8 cents.

According to the preceding table the average monthly expenditures of German urban families in April, 1918, per unit of consumption, amounting to 107.56 marks, show a considerable increase over those in April, 1916 and 1917, which varied but slightly. Not only the total expenditures have greatly increased but all individual items of the household budgets, with the exception of wages and tips, show an increase. Such regular increases in all items of the budgets, which in the case of food and of clothing are very considerable, can not be ascribed to fortuitous causes but is due to general price conditions.

While the absolute figures merely indicate how much prices have risen in 1918 as compared with 1916 and 1917, the relative figures give an entirely different picture. They show that in 1918 the expenditures for food formed a smaller percentage of the budget than in the two preceding years, while on the other hand expenditures for clothing represented 16.75 per cent of the entire budget as against 7.61 and 9.91 per cent, respectively, in 1916 and 1917. A striking fact in the average German budget shown here is that rent forms such a relatively small percentage of the budget and that in 1918 this percentage was even lower than in 1917. This is probably due to energetic enforcement of legislation against rent profiteering. The relative expenditure for fuel and lighting was practically the same in 1918 as in 1917. The average per cent of expenditure in 1918 for the principal groups of items of cost of living of German urban families is compared in the next table with that of white families in industrial centers of the United States.¹

¹ MONTHLY LABOR REVIEW, August, 1919. P. 118.

COMPARATIVE PER CENT OF FAMILY EXPENDITURE FOR THE SEVERAL ITEMS OF EXPENSE IN GERMANY AND THE UNITED STATES IN 1918.

Item.	Per cent of total expenditure.	
	Germany.	United States.
Food.....	48.0	38.2
Clothing.....	16.7	16.6
Rent.....	8.3	13.4
Fuel and light.....	5.4	5.3
Furniture and furnishings.....	1.4	5.1
Miscellaneous.....	20.2	21.3
	100.0	100.0

This comparison shows that the average relative expenditure of German families for food was much larger and that for rent and for furniture considerably smaller than the expenditure of American families for the same items, and that the average relative expenditure for clothing, fuel and light, and miscellaneous items was practically the same in the case of both nations' urban families.

The average amount and per cent of expenditure for food and the average consumption of food per unit of consumption of German urban families in April, 1916, 1917, and 1918, are shown in the following table:

AVERAGE EXPENDITURE FOR AND CONSUMPTION OF FOOD BY GERMAN URBAN FAMILIES PER UNIT OF CONSUMPTION, APRIL, 1916, 1917, AND 1918.

¹ The percentages shown for the individual food items are based on the total expenditure for food consumed in the household and not on the grand total of the table.

² Number.

³ Quarts.

The total monthly expenditure for food per unit of consumption fell from 39.04 marks in 1916 to 38.57 marks in 1917 and rose to 51.57 marks in 1918. In April, 1918, the expenditure for bread, potatoes, vegetables, and jam increased considerably, and only in the case of a few less important foodstuffs the expenditure decreased as compared with April, 1917. If the percentual expenditure for the individual food articles consumed in the household is considered it is found that in 1918 the expenditure for meat, sausages, ham, etc., formed only 17.08 per cent as against 22.53 per cent in 1917, a fact due to the lowering of the meat ration. The relative expenditure for potatoes formed 4.24 per cent of the total expenditure in 1917 and 8.43 per cent in 1918, owing to the doubling of the potato ration in the latter year. That for bread decreased from 10.42 per cent in 1917 to 9.70 per cent in 1918. The expenditure for jam and preserved fruit rose from 2.52 per cent in 1917 to 6.68 per cent in 1918, owing to a greatly increased ration. The relative expenditures for all other foodstuffs underwent less marked changes.

The data relating to the consumption of the individual foodstuffs show that on the whole there was a slight improvement in April, 1918, in the food supply as compared with April, 1917. The consumption of potatoes was twice as large as in 1917; that of bread also shows an increase. Meat was practically the only important foodstuff of which the consumption had decreased.

The present investigation has brought out the fact that the family budgets of all income classes covered showed an excess of expenditures over income which had to be made up for through the spending of former savings or the contracting of debts. In the three preceding investigations family budgets showing a deficit were found only in the three lowest income classes, i. e., those with incomes of under 100 marks, over 100 to 200 marks, and over 200 to 300 marks, while the investigation covering April, 1918, has revealed that households with an income of over 300 to 400 marks had the largest deficits and that even in households with incomes of over 400 to 500 marks, and of over 500 marks, the excess of expenditures over income was considerable. The average monthly deficit per gainfully engaged person was 20.34 marks in the case of workers' families and 49.33 marks in that of low-salaried officials.

WAGES AND HOURS OF LABOR.

Wages and Hours of Labor in Woodworking Industries.

IN THE following tables are presented statistics concerning hours and earnings of employees in such woodworking industries as were included in the recent industrial survey. Comparisons are also made with similar figures for earlier years gathered by the Bureau in previous investigations. The particular woodworking industries included in the survey were the manufacture of lumber, planing-mill products (sash, doors, and blinds), and furniture. The investigation of the furniture industry was confined to establishments engaged in the manufacture of plain or upholstered wooden furniture.

In each of the three industries the attempt was made to include in the survey a sufficient number of carefully selected establishments to give results that could be depended on as fairly typical. Table 1 shows what States were included in each industry, and the number of establishments and the number of employees in each State.

Owing to the conditions under which the survey was carried out it was impossible to obtain data for all establishments for the same pay-roll period. In normal times the spread of pay-roll periods over a reasonable time would make comparatively little difference in the results. At the time of the present survey, however, industry was so unsettled and conditions were changing so rapidly that the difference of two months in the time when particular establishments were visited might make material differences in the character of the information obtained. To assist the reader in estimating the effect of changing conditions upon the material herewith presented, there is shown in the following table for each industry the number of pay-roll periods falling in each month of the survey.

TABLE 2.—NUMBER OF PAY-ROLL PERIODS IN SPECIFIED MONTHS.

Industry.	Total number of pay- roll periods.	Number of pay-roll periods in—							
		Sept.	Oct.	Nov.	Dec.	Jan.	Feb.	Mar.	Apr.
Lumber.....	141	9	12	8	15	70	15	8	4
Millwork.....	105	1	1	4	45	19	12	19	4
Furniture.....	111			3	45	23	25	15	

In the different industries the following percentages fell within the four months, December, January, February, and March: Sawmills, 90 per cent; planing mills, 77 per cent; furniture, 96 per cent; the three industries combined, 87 per cent. The information is presented as of the year 1919. In no one of the industries, so far as could be ascertained, were there any changes in rates of wages during the progress of the survey.

The information concerning hours and earnings on which Tables 4 and 5 are based was obtained directly from the pay rolls or other records of the companies by agents of the Bureau. Other information was obtained from responsible officials in personal interviews. Wherever the records of the company failed to indicate the time actually worked by piece workers during the selected pay-roll period, arrangements were made to have such a record kept for a future period from which the data were afterwards copied. In all cases the figures copied by the agents represented hours actually worked and earnings actually received.

As the material comes into the office the figures for hours and those for earnings are both in incommensurable form on account of inequalities in the length of pay-roll periods and in the time worked by different individual employees. Before they can be presented in tabular form it is necessary to reduce both hours and earnings to a common denominator. The comparable figures selected for

use in Tables 4 and 5 are hours worked per day and per week, and earnings per hour and per week. These figures are obtained in the following manner:

The hours per day of each employee are obtained by dividing the number of hours worked by him during the pay-roll period by the number of week days, holidays omitted, in the pay-roll period. Thus in the case of pay rolls for a single week containing no holiday, the hours worked by each employee during the pay-roll period are divided by six, whether the employee worked on each of the six days or not. Similarly the hours actually worked by an employee in any establishment during a pay-roll period containing 13 workdays were divided by 13, regardless of the number of days on which the employee worked. The resulting figure represents the number of hours per day that the employee would have worked, if his time had been uniformly distributed among the week days of the pay-roll period.

All one-week pay rolls included in the survey of these industries were six-day pay rolls. The half-monthly and monthly pay-roll periods, however, showed considerable difference in length. Table 3 shows for each industry the number of schedules covering each specified number of work days.

TABLE 3.—SCHEDULE DISTRIBUTION BY NUMBER OF WORKDAYS IN PAY-ROLL PERIOD.

Industry.	Number of schedules in pay-roll period covering—									Total number of schedules.
	One week or 6 work days.	Two weeks, one-half month, or—				One month or—				
		11 work days.	12 work days.	13 work days.	14 work days.	24 work days.	25 work days.	26 work days.	27 work days.	
Lumber.....	55	—	19	18	7	3	9	3	27	141
Millwork.....	75	2	20	2	4	1	1	—	—	105
Furniture.....	79	1	20	3	8	—	—	—	—	111
Total.....	209	3	59	23	19	4	10	3	27	357

By using the average number of hours per week day as a factor it is possible to obtain a figure for the average number of hours worked per week by multiplying that factor in every case by 6. With one-week pay rolls the result represents approximately the original figure for hours per week actually worked. Such variations as are found are due to the fact that the average hours per day as given in the table are the averages of the hours of individual employees, with no weight to represent the proportion of the pay-roll period worked by different individuals. In the case of longer pay rolls, however, the resulting figure is hypothetical. It represents the number of hours per week that the employees would have worked in a six day week if their working hours had been distributed uniformly over the week days of the entire pay-roll period.

This figure of hours worked per week is no more useful for comparisons of hours in different occupations or industries than is the figure of hours per day. It has the advantage, however, of enabling comparisons to be drawn between the hours actually worked on the average by people in each occupation and the full-time hours of the same occupation.

By full-time hours per week is meant the number of hours that is thought of in the occupation as constituting a normal week's work—the number of hours the employee regularly expects to work and the employer expects him to work. This figure was obtained from the officials of the various establishments by the agents of the Bureau. The difference between average actual hours per week and average full-time hours per week is an indication of the degree of irregularity of employment among the employees to whom the figures apply.

Combining hours per day or hours per week computed from the records of one-week pay rolls with those computed from longer pay-rolls introduces a disturbing factor which must not be lost sight of in using the figures for comparative purposes. The figures for a group of employees computed for four weeks combined will differ from those computed for the same group of employees for any one of the same four weeks separately. This difference is always in the same direction, though varying in degree. The causes of it are twofold.

The first cause is related to the conduct of employees who remain on the pay roll throughout the four-week period. In any one week a certain percentage of these employees will be absent a number of days and consequently will show abnormally low hours per day. During the same week another group will do an unusual amount of overtime work and will show abnormally high hours per day. But while the percentages in these low and high groups in different weeks will run fairly uniform, the individuals in the groups change from week to week. The effect of this is to offset wholly or in part the abnormally high attendance record of an employee in one week by a normal or even abnormally low attendance record of the same employee in the other three weeks. The corresponding effect upon the hours per day of those with low-attendance record in any one week need not be shown at length.

So far as persistent employees are concerned the longer the period covered by the pay roll from which the data are obtained the smaller will be the number of employees found in the very high and very low hour groups and the larger the number in the intermediate groups. This movement, however, will have comparatively little effect upon

the final average; in fact, if the movement were perfectly symmetrical at both ends of the scale, the final average would remain unaffected.

The second cause is connected with the amount of labor turnover in different establishments. The number of short-time employees who leave permanently, and the equal number who take the places of those who leave, may be nearly the same from week to week. But the effect of this movement is cumulative, and will be approximately twice as great in a two-week period, and four times as great in a four-week period, as in any one of the weeks making up these longer periods. For this effect there is no offsetting factor. So far as this influence is concerned, therefore, the longer the pay-roll period, the lower will be the average hours per day.

For these reasons it is inadmissible to use the figures of average hours per week day or average hours per week for very close comparisons, without making allowance for the relative number of short and long pay-roll periods on which the averages are based. For practical purposes, however, the figures are sufficiently comparable to give a fairly accurate representation of relative hours of labor in different States, industries, or occupations, and of the percentage of the full time of each occupation which the employees in that occupation actually worked.

For comparative purposes the earnings of each employee are reduced to the form of average earnings per hour by dividing his total earnings for the pay-roll period by the total number of hours worked by him during the period. The resulting figure indicates how much he would have earned each hour he worked if his earnings had been distributed uniformly over all the hours actually worked by him during the period.

By multiplying the average hourly earnings of a group by the previously computed average hours per week worked by the same group, a figure is obtained which represents closely the average actual weekly earnings of the group. In the case of one-week pay rolls this process brings us back practically to the average actual earnings for the week as computed directly from the actual earnings of the individual employees as reported on the schedules. For employees with longer pay-roll periods, however, the average is not the average of what was actually earned in any one week, but the average of what would have been earned if they had worked the same number of hours on each week day of the pay-roll period. In some respects it is a more significant figure than the actual earnings for a single week; for in general the longer the pay-roll period from which average weekly earnings are computed, the more nearly typical may the resulting average be assumed to be.

One other somewhat variable factor involved in the figure for average actual weekly earnings should be pointed out. The practice of working fewer hours on Saturday than on other week days, while by no means universal, is widely prevalent, and the number of hours worked on Saturday varies more or less from establishment to establishment. Whenever fewer hours are worked on Saturday than on other days the theoretical figure for actual weekly earnings described above will express exactly what it professes to express (namely, the amount that would have been earned in a week if the earnings had been uniformly distributed) only in the case of employees for whom Saturdays constituted one-sixth of the total number of days worked by them. In all other cases the figure will vary by a few cents from theoretical exactness. If the number of Saturdays exceeds one in six, the computed weekly earnings will be somewhat too low; if the number is less than one in six the earnings will be correspondingly high. Careful experiment has shown, however, that these variations offset one another so largely that the net result is a variation of a cent or two at the most in the weekly average for the group, a variation so slight that it may be entirely disregarded.

Average actual earnings per week in each occupation, computed as described above, are brought into comparison in the tables with average full-time weekly earnings in the same occupation. In a general way the ratio of full-time earnings to actual earnings might be expected to be identical with the ratio of full-time hours to actual hours. As a matter of fact, however, these ratios may vary to a considerable extent. Actual earnings per week include the week's share of all extra pay for overtime and of all premiums and bonuses. Full-time earnings, on the other hand, represent what an employee can earn by working exactly the normal full-time hours of the establishment. The factor of extra pay for overtime, included in computing actual hourly earnings, was in general eliminated in computing full-time earnings. In those instances, however, which were comparatively rare in these industries, in which the normal working day consisted of a certain number of hours at a basic rate, and an additional hour or two at an increased rate, the extra pay for such additional hours was included in the full-time earnings. Each bonus had to be considered separately. Those that could be earned in regular time, as, for example, bonuses for regularity of attendance, were included; those that could be earned only by working overtime were excluded; while those earned partly in regular time and partly in overtime, as indicated by the relative amount of overtime work performed, were distributed accordingly. The result of eliminating these factors of extra pay for overtime and bonus is to reduce the ratio of full-time

earnings to actual earnings somewhat below the ratio of full-time hours to actual hours.

Owing to the necessary space limitations of an article of this nature it is possible to present in detail only a part of the information gathered during the survey. In the millwork industry alone are the data presented for all occupations included in the survey. In the other industries only those occupations have been shown in detail in which considerable numbers of employees were found. In the furniture industry the occupations given separately include 8,778 employees out of a total of 11,471. In the lumber industry 17,555 out of 18,022 employees are represented. In the figures for each industry as a whole are included the data for the occupations omitted in the detailed tables. The details here omitted will be presented in the final report on these industries. With the aid of the explanations already given as to the method of constructing the tables and the uses to which they may be put, the figures may be left to speak for themselves.

TABLE 4.—AVERAGE ACTUAL AND FULL-TIME HOURS AND EARNINGS IN WOODWORKING INDUSTRIES, BY OCCUPATION, SEX, AND STATE.

All occupations, male and female.	111	11,471	51.4	104.3		8.5	51.0	18.05	34.03		.338	17.24	18.78	

The woodworking industries here considered are noteworthy for the small number of female employees engaged in them. No women were found engaged in the manufacture of lumber. In planing mills there were 225 females out of a total of 5,379 employees. In the furniture industry 915 female employees were found in a total of 11,528 employees: female employees therefore constituted 7.9 per cent of the total number included in the survey of this industry. In 1915, the date of the last previous investigation of the industry by the Bureau, the corresponding figures were 325 in a total of 25,576, or a trifle over $1\frac{1}{4}$ per cent.

In 1919 the 915 female employees in the furniture industry were found in five occupations, and constituted 10.5 per cent of the total number in these occupations. The occupations, the number of women in each occupation, and the percentage which females constitute of the entire number of employees in the occupation are as follows:

TABLE 5.—NUMBER AND PER CENT OF FEMALES IN THE FURNITURE INDUSTRY.

Occupation.	Total employees.	Females.	
		Number.	Per cent.
Finishers.....	2,303	204	8.9
Laborers.....	2,136	301	14.1
Machine hands.....	3,104	128	4.1
Sanders, hand.....	739	248	33.6
Veneerers.....	420	34	8.1
Total.....	8,702	915	10.5

For only three of these occupations, namely, finishers, laborers, and machine hands, are detailed figures given in the general table just presented. The following brief analysis includes as well the two occupations, hand sanders and veneerers, previously omitted.

The earnings of female employees in the different occupations are from 7 to 12 cents per hour below those of males in corresponding occupations. In general, the larger the percentage of females in an occupation the lower the earnings of both males and females and the smaller the difference between the two figures. These facts may be clearly brought out by grouping the occupations according to the proportion of women in them and comparing the average wages of men and women in the different groups. The results of such procedure are herewith shown.

TABLE 6.—HOURLY EARNINGS BY OCCUPATIONS CLASSIFIED ACCORDING TO PERCENTAGE OF FEMALES.

Number of occupations.	Number of—		Per cent of females.	Average hourly earnings.	
	Employees.	Females.		Males.	Females.
Six occupations with no females.....	2,769			0.407	
Three occupations with 1 to 10 per cent females.....	5,827	366	6.3	.352	0.235
Two occupations with 10 to 50 per cent females.....	2,875	519	19.1	.274	.200

Wages of men and women in different occupations, therefore, seem to vary inversely as the proportion of women in the occupations, whether because the women more easily find an entrance into the low-paid occupations, or because the entrance of women into an occupation tends to lower the scale of wages in that occupation. Probably both influences are at work, the one enhancing the effect of the other.

On their face the figures for the earnings of men and women respectively in the furniture industry seem to furnish an illustration of the generally accepted view that women are paid less than men for the same kind and amount of work. A further analysis of the figures, however, on the basis of the respective earnings of male and female piece and time workers, seems to point to a different conclusion. The details of the analysis require too much space for a MONTHLY LABOR REVIEW article. They will be given in full in the forthcoming Bulletin dealing with those industries. They may be summarized as follows:

Whether we include figures from all establishments in which the five occupations under consideration were found, or only those from establishments in which both males and females were found in the several occupations, or, finally, only those from establishments in which both male and female piece and time workers were found, the earnings of male piece workers are found to exceed those of female piece workers more than the earnings of male time workers exceed those of female time workers. The last basis of comparison may be considered the most reliable, in spite of the fact that it very much reduces the numbers included, since it also diminishes the probability that the differences discovered are due to other causes than the sex of the employees or the method of wage payment.

Establishments with both male and female piece and time workers were found for only two occupations, finishers and machine hands. The data from these establishments is presented in the following table:

TABLE 7.—MALE AND FEMALE PIECE AND TIME WORKERS, IDENTICAL ESTABLISHMENTS.

Occupation.	Males.				Females.			
	Piece.		Time.		Piece.		Time.	
	Num-ber.	Earn-ings.	Num-ber.	Earn-ings.	Num-ber.	Earn-ings.	Num-ber.	Earn-ings.
Finishers.....	110	\$0.482	125	\$0.327	27	\$0.266	16	\$0.216
Machine hands.....	27	.409	89	.390	20	.237	11	.205
Total.....	137	.468	214	.353	47	.254	27	.212

The female timeworkers whose record is summarized in the table just presented were paid wages averaging 14.1 cents less per hour than the male timeworkers in the same occupations. Apparently, therefore, women were doing equal work with men and receiving only 60 per cent of the pay. But the comparative hourly earnings of pieceworkers seem to indicate that in these occupations women were worth less than men; for, while working at the same piece rate, female pieceworkers earned 21.4 cents per hour less than male pieceworkers; that is, their earnings were only 54.3 per cent of the earnings of the male pieceworkers. If, then, it is to be assumed that when men and women are working at the same occupation they are doing the same kind of work, this comparison would seem to indicate that in this particular case female timeworkers were paid more rather than less than male timeworkers in proportion to the amount of work they were doing. This condition suggests the necessity of using caution in applying the doctrine of "equal pay for equal work" for men and women.

In the following tables are shown relative hours and earnings for selected occupations in the three woodworking industries for the years for which the Bureau had the necessary data. The figures for 1913 are in all cases used as the base. The comparison is necessarily confined to those occupations for which the requisite information is at hand in comparable form. Owing to certain differences in the method of tabulating the data for 1919 as compared with the method followed in earlier years, it is impossible to compute relatives for male laborers. Moreover, female employees were not tabulated separately in any furniture occupation in earlier years, and consequently can not be included in the table of relatives.

There is presented in the table not only relatives for selected occupations but also relatives for each industry as a whole. It seems desirable to point out certain features of the method by which those relatives were computed. In the first place the averages of hours

and earnings on which the 1919 relative is based cover only selected occupations. In earlier years the relative has been based on all wage-earning employees found in the establishments visited. Those employees who did not fall within any of the selected occupations were grouped in the tables under the caption "other employees." This was done, not because of any value that was supposed to attach to figures for this heterogeneous group, but because it was feared that the omission of these employees might seriously affect the averages for the industry as a whole. Careful experiments carried out by the Bureau indicate that, if the selected occupations include low-paid groups, such as laborers, in proportion to their numbers in the industry, the omission of "other employees" has little effect upon industry averages.

In the second place, it should be stated that the industry averages given in the table are based on all of the occupations listed in the several industries and not on those to which limitations of space made it necessary to confine the present article. The total number of selected occupations used in computing the industry relative was 7 in the furniture industry and 10 in the lumber industry. In the millwork industry no occupations were listed in addition to the three included in this report.

Finally no attempt has been made to base the relatives on data from identical establishments. With the changes that the lapse of time since the last investigation has brought about in the different establishments, the plan of confining the comparison to data from identical establishments would have two disadvantages. It would in some cases seriously limit the numbers on which the comparative figures are based; in other cases it might give undue weight to changes in hours and earnings taking place in one or another of the limited number of establishments covered, when those changes did not reflect conditions in the industry as a whole. The present relatives are based on the entire body of information available for each year for which a relative is shown.

The industrial survey covered eight industries for which the Bureau had material on hand for the calculation of industry relatives. That the increases in earnings in the industries included in this report may be compared with increases in the other five industries, the relatives of each industry are given in the following table:

TABLE 9.—RELATIVE EARNINGS PER HOUR IN EIGHT INDUSTRIES, 1913 TO 1919.
[1913=100.]

Year.	Cigars.	Clothing, men's.	Furniture.	Hosiery and underwear.	Iron and steel.	Lumber.	Mill-work.	Silk goods.
1913.....	100	100	100	100	100	100	100	100
1914.....	(1)	(1)	(1)	103	103	(1)	(1)	(1)
1915.....	(1)	(1)	103	(1)	101	91	99	(1)
1916.....	(1)	(1)	(1)	(1)	(1)	(1)	(1)	(1)
1917.....	(1)	(1)	(1)	(1)	(1)	(1)	(1)	(1)
1918.....	(1)	(1)	(1)	(1)	(1)	(1)	(1)	(1)
1919.....	152	171	154	184	221	194	151	191

1 Not reported.

An examination of this table shows that while employees in the lumber industry have received increases in earnings considerably in excess of the average for the eight industries and of the 75 per cent increase in the cost of living since 1913, both the furniture industry and the millwork industry have failed to keep pace with the general movement. On the contrary, the millwork industry is at the bottom of the list in this respect, and the furniture industry only slightly better off. How far that condition is to be attributed to the effect of the war, and how far to the existence of large numbers of comparatively small, isolated, and unorganized plants in those industries, it is impossible to determine.

War-Time Changes in Wages.

THE National Industrial Conference Board has recently published a report on wages in several important industries, from 1914 to 1919.¹ The report includes data for boot and shoe, chemical, cotton, metal, paper, rubber, silk, and woolen manufacturing. The period covered is approximately that of the war, including that immediately following the signing of the armistice. A large number of tables are given showing for the leading occupations or occupation groups of each industry the number of workers for whom the data are reported; the average hours worked per week; the average hourly and weekly earnings; and the relative hourly and weekly earnings for the period covered, using the figures for 1914 as a base.

The following table contains summaries of the items named above for each of the industries included in the study:

AVERAGE ACTUAL AND RELATIVE HOURLY AND WEEKLY EARNINGS IN SPECIFIED INDUSTRIES, 1914 TO 1919.

Boot and shoe manufacturing: 14 establishments.

Pay roll for one week in—	Males.						Females.					
	Total number of workers.	Average hours per week.	Average actual earnings—		Relative earnings—		Total number of workers.	Average hours per week.	Average actual earnings—		Relative earnings—	
			Per hour.	Per week.	Per hour.	Per week.			Per hour.	Per week.	Per hour.	Per week.

While the figures show, with few exceptions, an increasing hourly rate of earnings throughout the period, the weekly earnings show small increases, or, in several instances, decreases, between September, 1918, and March, 1919. This is due to the shorter hours worked in 1919, the reduction in a number of cases being considerable.

The following table shows the average hourly earnings in several occupations in the industries covered by the report, arranged in order beginning with the highest based on wages in March, 1919. The earnings of males and females are shown separately.

COMPARISON OF AVERAGE HOURLY EARNINGS IN DIFFERENT OCCUPATIONS IN SEPTEMBER, 1914 AND 1918, AND MARCH, 1919.

Occupations.	Piece or time workers.	Average hourly earnings.		
		September, 1914.	September, 1918.	March, 1919.

Wages of Women in Hotels and Restaurants in the District of Columbia.¹

A SURVEY of the wages paid to women in hotels and restaurants, apartment houses, and hospitals in the District of Columbia, was made during the months of June, July, and August, 1919, by agents of the District Minimum Wage Board. Transcripts of the pay rolls were obtained, for the week or half month or month preceding the visit, from 193 establishments, including 50 hotels, 135 restaurants, 5 apartment houses, and 3 hospitals. A total of 2,209 women were employed in these establishments, distributed as follows: 1,010, or 46 per cent, in hotels; 1,055, or 48 per cent, in res-

¹ Wages of women in hotels and restaurants in the District of Columbia. District of Columbia Minimum Wage Board, Washington, Oct. 10, 1919. 23 pp. Bulletin No. 3.

taurants; 130, or 6 per cent, in hospitals; 14, or 0.6 per cent, in apartment houses. Employees in practically all the manual and clerical positions open to women, except those in the laundry, were included in the survey.

Three important characteristics of the hotel and restaurant business were found to influence the money wage received by women employees. First among these is the unsteadiness of employment. Of the 153 women on the pay rolls of three hotels, 68, or 44 per cent, worked less than a full month. Of the 127 women on the pay rolls of two other hotels, 49, or 39 per cent, worked less than a full half month. Assuming that the same number in this latter group would have failed to work the full pay period in the other half month, 98, or 77 per cent of this group would have worked less than a full month. Such irregular attendance and constant shifting from job to job makes earnings considerably less than rates of pay and this difference must be borne in mind in considering the analysis of the wage rates.

The second factor influencing wages is the tips received by maids, elevator operators, and waitresses. Reports as to the amount received in tips were secured by the board from women in these occupations. Tips reported to be received by elevator operators—averaging about 35 cents a week—are too small to affect earnings. Eight maids stated that they received no tips, seven stated the amount to be "very little," and the average for those giving actual figures was \$1.22 a week. This again is too small an amount to make any appreciable addition to wages. Very few waitresses are employed in hotels other than in the help's dining room, where practically no tips are given. The average tips received by waitresses in restaurants was \$4.62 a week. As the waitresses were found to be among the best paid employees, the generally low wages of the women are not offset by the value of tips.

The third factor influencing wages is the prevalence in this industry of other than money compensation. Of the 2,209 women, 6 per cent received room and meals, 65 per cent received three meals a day, 9 per cent received two meals a day, 3 per cent received one meal a day, and 17 per cent received only a money wage. For the purpose of ascertaining the value in money of the total wage, including such additional compensation, the Board assumed the cost of board as \$6 a week and of room as \$3 a week. These figures were arrived at from the minimum cost of board and room for a self-supporting woman in the mercantile trades set by the recent Mercantile Wage Conference. These figures are considerably higher than the estimated cost of furnishing such board and room, as given

by the hotel managers. They are higher than the actual value of the room or board, or both, tendered the employee in lieu of wages, because the employee's hours may be so arranged that only two meals instead of the three allowed can be secured conveniently, or she may have to provide her own meals on the seventh day each week, if she works a six-day week, or she may, as several stated they did, find the meals provided by the hotel unpalatable. As these figures are the only actual figures available, however, the report allows as the money value of room and meals \$9 a week for room and board, \$6 for three meals a day, and a proportionate amount where less than three meals per day were received.

Analysis of the Wage Situation.

All wage material is presented in the report separately for groups of employees according to the amount allowed them in room and meals, so that the total money value of the wages received by all groups may be compared with exactness. Wages in hotels are usually based on a monthly rate. In order to make these rates comparable to those paid by the week in restaurants and other industries, these monthly rates have been reduced to weekly rates by multiplying them by 12 and then dividing by 52.

The wage situation in the hotel industry is summed up in the following table:

NUMBER AND PER CENT OF WOMEN EMPLOYED IN HOTELS CLASSIFIED BY RATE OF WAGES PER WEEK AND BY ROOM AND MEALS ALLOWED PER DAY.

Number.

Compensation in addition to wages.	Woman employees whose rates of wages per week were—											Total.
	Under \$7.	\$7 and under \$8.	\$8 and under \$9.	\$9 and under \$10.	\$10 and under \$11.	\$11 and under \$12.	\$12 and under \$13.	\$13 and under \$14.	\$14 and under \$15.	\$15 and under \$16.	\$16 and over.	
Room and three meals.....	66	4	9	5	2	1	1	6		1	6	101
Three meals.....	132	7	46	155	59	42	14	29	1	14	25	524
One meal.....	8		4			2				1	4	19
Nothing.....	15	8	57	169	23	11	4	15		8	56	366
Total.....	221	19	116	329	84	56	19	50	1	24	91	1,010

Per cent.

Room and three meals.....	65.3	4.0	8.9	5.0	2.0	1.0	1.0	5.9		1.0	5.9	100
Three meals.....	25.2	1.3	8.8	29.6	11.2	8.0	2.7	5.5	0.2	2.7	4.8	100
One meal.....	42.1		21.1			10.5				5.2	21.1	100
Nothing.....	4.1	2.2	15.6	46.2	6.3	3.0	1.1	4.1		2.1	15.3	100
Total.....	21.9	1.9	11.5	32.6	8.3	5.5	1.9	4.9	.1	2.4	9.0	100

This table shows that 65 per cent of the women receiving room and board in addition to wages were paid less than \$7 a week; 65 per cent of those receiving three meals a day were paid less than \$10 a week; 68 per cent of those receiving only a money wage were paid less than \$10 a week, 77 per cent less than \$12 a week, and only 15 per cent \$16 or over.

The next table shows wage conditions among restaurant employees.

NUMBER AND PER CENT OF WOMEN EMPLOYED IN RESTAURANTS, CLASSIFIED BY RATE OF WAGES PER WEEK AND BY MEALS ALLOWED PER DAY.

Number.

Compensation in addition to wages.	Woman employees whose rates of wages per week were—											Total.
	Under \$7.	\$7 and under \$8.	\$8 and under \$9.	\$9 and under \$10.	\$10 and under \$11.	\$11 and under \$12.	\$12 and under \$13.	\$13 and under \$14.	\$14 and under \$15.	\$15 and under \$16.	\$16 and over.	
Three meals.....	13	37	142	72	158	18	224	14	69	35	43	825

One meal.....	18	5	7	2	1				1			34
Total.....	73	68	193	88	169	34	247	19	75	37	52	1,055

Per cent.

Three meals.....	1.6	4.5	17.2	8.7	19.1	2.2	27.1	1.7	8.3	4.2	5.2	100
Two meals.....	21.4	13.3	22.4	7.1	5.1	8.2	11.7	2.5	2.5	1.0	4.6	100
One meal.....	52.9	14.7	20.6	5.9	2.9				2.9			100
Total.....	6.9	6.5	18.3	8.4	16.0	3.2	23.4	1.8	7.1	3.5	4.9	100

The wage situation in the restaurant industry may be summarized as follows: Of the women receiving three meals a day 32 per cent were paid less than \$10 a week, and 78 per cent of those receiving two meals a day were paid less than \$12 a week. The one-meal figures are not comparable, since most of the women in that group work only part time.

Comparing these figures with those presented for the hotel industry, it will be seen that the wage rates prevailing in the restaurants of the District were considerably higher than those found in the hotels.

Hospitals were classed with hotels and restaurants in this study, because the women employed in hospitals, exclusive of the nurses, perform work very similar to that performed by women employed in hotels. Of the 130 women working in hospitals, 28 per cent received room and three meals, 69 per cent received three meals, and 2 per cent one meal a day in addition to their money wage. Over

half, 54 per cent, of the women receiving room and meals were paid less than \$7 a week, and of those receiving board alone, 97 per cent were paid less than \$10 a week.

It was found that the average apartment house employs few women, the most general occupations being telephone and elevator operating. The 14 women for whom data were collected received a straight money wage and all of them were paid less than \$14 a week. Wage conditions were, therefore, found to be worse in hospitals and apartment houses than in hotels and restaurants.

Using the estimates of the value of room and board accepted as a working basis, it is found that of the 2,209 women employed in this industry 72 per cent of those employed in hotels, 43 per cent in restaurants, 82 per cent in hospitals, and 100 per cent in apartment houses were receiving less than \$16 a week or its equivalent. A further analysis of the wages of all the women reveals striking differences between the wages of those receiving a straight money wage and those receiving a money wage supplemented by room and meals. Those who received only a money wage were the poorest paid, 85 per cent of them receiving less than \$16 a week. On the other hand, the best paid women were those in the three-meal group, only 48 per cent of them receiving less than the \$10, which, when board is provided, has been considered as equivalent to \$16 a week. The women receiving both room and board were between these two groups, 62 per cent being paid less than \$7 per week, the figure estimated as the equivalent of a \$16 money wage. This difference between the real wages of the group receiving only a money wage and of the groups receiving room or meals or both can not be accounted for on an occupational basis, for it applies within each occupation as well as to the whole industry.

It seems evident from the figures presented in the report that a "substantial number of woman employees" in hotels, restaurants, hospitals, and apartment houses "are receiving wages inadequate to supply them with the necessary cost of living and maintain them in health and protect their morals."

Cost of Living in Relation to Wage Adjustments.

THE adjustment of wages to the cost of living has been effected in some instances in a somewhat haphazard way by applying to local conditions the results of surveys of cost of living covering communities far distant or giving a composite of the country as a whole. In comparatively few instances have wages been increased as the result of the careful and scientific study of prices and living costs in the immediate vicinity of the plant, which after all

determine the expenditures of the employees whose wage scales are to be adjusted.

How one firm employing more than 1,000 people set about to determine the increase in the cost of living as affecting its own employees immediately and then to make a wage adjustment that should adequately compensate for the increase, is described in some detail in an article on cost of living in relation to wage adjustments published in the Bulletin of the Taylor Society (New York) for October, 1919 (pp. 29 to 46). The purpose of the investigation was to set up and adopt a standard method for readily making comparisons in the cost of living from year to year and to determine the relative percentage of increase, with this percentage as a guide, to ascertain whether or not the advance in the daily earnings of the various classes of workers has shown the same relative per cent of increase as has the cost of living, and then, if classes have not been advanced proportionately, to adjust the rates for such classes to the extent due them as determined by the findings.

The management took the position that an educational campaign was necessary to bring employees to realize that production is the only possible remedy for scarcity of goods, which in turn is the reason for high prices, and that any interference with production by strike or otherwise merely aggravates the trouble and results in intensifying the very condition against which they protest. To quote from the report:

There is no better place to begin such a campaign than in our own factories and among our own workmen, and it is plainly up to the management to take the initiative. This means a careful analysis of the wage conditions, due regard being given to the current purchasing power of the dollar, and practical application of our findings to the solution of our own problem. We believe it fair and practical to "give more in order to get more," and in the recognition of the relative increase in living cost, as compared with the relative increase in wages in any given period, we are only laying the foundation for better conditions and better relations between men and management, which in turn will lead to the ultimate end of maximum production from any given set of conditions or facilities; and for the coincident results, such as maximum wages, minimum costs, low labor turnover, equitable profits on capital invested, and mutual success and satisfaction to all concerned, viz, the worker, the manager, the owner, and the community of which these three are members.

If we do not recognize this factor in our wage relations, then we are bound to pay for it one way or another. Briefly, when an individual finds his income does not permit him to maintain the standards of living to which he has been accustomed (to say nothing of reaching the higher standards which human nature inherently desires as men advance in years) he soon gets into a frame of mind where he is torn between (a) lowering his standards of living by omitting certain articles of diet—making the old suit last another year, moving to cheaper quarters, or practicing other economies or substitutions—and (b) "hitting the boss for a raise."

It seems that the individual does not let himself be "torn" very far in either direction. He quickly acts in the direction of (b), and if the answer is not favorable or not promptly given, individual dissatisfaction soon arises, and like the proverbial bad apple in a barrel of otherwise good ones, he soon contaminates the others. The manager soon sees an element of unrest increasing; strikes may, and in fact do follow, as witnessed by the hundreds of them occurring of late, all of which have had as their motive, or at least a part of that motive, the "recognition in wages of the increasing cost of living." Why then, should we overlook the obvious, or dodge the inevitable? Should we not expect to meet the increasing cost of labor as we do the increasing cost of raw materials by providing in the selling price of our respective products a suitable margin for increased labor costs, which in the main will, and do result, more from increased cost of living than from any other cause?

The questionnaire prepared for the purpose of obtaining from the employees their actual standard of living was sent to 280 workers equally divided among unskilled, skilled, and highly skilled. Only 15 per cent were returned completely filled out, and 33.4 partially filled out. The computations are based on the average family of five—father, mother, two boys aged 15 and 9, respectively, and a girl aged 7—this family consisting of 3.6 adult males as measured by well-known dietary standards.¹

The report goes into considerable detail in presenting the results of the survey. It is stated that an examination of the questionnaire showed that the same articles used in the same quantity by the standard family of five in the years 1913, 1915, 1917, 1918, and 1919 could be purchased in 1913 for \$4.06 per day and in May, 1919, for \$7.39 per day, an increase of 81.6 per cent in daily living cost. This per cent of increase was accordingly adopted as the basis upon which to make the wage adjustment. The following table is compiled from the tabulations in the report. It shows the relative daily living costs for 1913, 1915, 1917, 1918, and to May, 1919, with per cent of increase in 1919 over 1913.

RELATIVE DAILY LIVING COSTS IN 1913, 1915, 1917, 1918, AND TO MAY, 1919.

¹ See 18th annual report of the U. S. Commissioner of Labor, 1903, p. 102.

² To May, 1919.

In compiling the data on actual wages paid, the management included only factory departments and classified these into productive and nonproductive labor. The daily wages for each department were obtained by going through the pay roll for each year and securing the daily earnings for each representative class or group of work in that department. In this manner wages were found for both productive and nonproductive labor and the per cent increase computed for each year concerned. The two classes of labor were then combined and the average daily earnings computed for the years 1913, 1915, 1917, 1918, and to May 28, 1919. Percentage increases for these years were then computed and used in the comparisons with the increased cost of living in the same years. As a result it was found that the average wages in all departments rose from \$2.48 in 1913 to \$4.15 in 1919 prior to May 28, or 67.1 per cent.

RELATIVE DAILY RATES OF WAGES IN 1913, 1915, 1917, 1918, BEFORE AND AFTER THE WAGE ADJUSTMENT OF MAY 28, 1919.

Item.	1913	1915	1917	1918	Before adjust- ment of May 28.	1919	
						After adjustment of May 28.	
						Amount.	Per cent of increase over 1913.
Productive labor.....	\$2.44	\$2.53	\$3.03	\$3.27	\$4.00	\$4.37	79.1
Nonproductive labor.....	2.53	2.49	3.07	3.35	4.31	4.46	76.3
Both classes.....	2.48	2.51	3.05	3.31	4.15	4.41	77.7

Governed thus by an increase in the cost of living of 81.6 per cent and an increase in wages of 67.1 per cent, it was apparent that an adjustment was due which would bring the current daily wages into the same relation with the daily cost of living in 1919 as prevailed in 1913. The management thereupon decided to put through a wage advance in recognition of this discrepancy as shown by 81.6 per cent increase in the cost of living and 67.1 per cent increase in wages for the same period.

Although it developed that some classes of labor had advanced more than others during the period since 1913, it was decided to make no discrimination, and a wage advance varying from 2½ cents to 8 cents per hour on all classes of labor was put into effect.

The report states that in the adjustment the margin of difference between 81.6 per cent and 67.1 per cent, namely, 14.5 per cent, was cut to 3.9 per cent. That is, the increase in the wages after adjustment was 77.7 per cent as against 67.1 per cent before the adjustment. This difference of even 3.9 per cent was not intentional, it is

declared, for all classes of labor were brought up 81 per cent or better from the prevailing 1913 daily wage.

But when averaging the individual rates for each man in a department, and then averaging these composite rates for all departments, the new scale ranging from \$3.60 (or $\$0.45 \times 8$ hours) minimum, to \$7.20 (or $\$0.90 \times 8$ hours) maximum, gave, when weighted by the number of men receiving these rates (or those in between a new average of \$4.41, and this is 77.7 per cent higher than the average of \$2.48 for all classes in 1913. The next wage adjustment involving recognition of cost of living will, we intend, make up for this slight deficiency, for we will have the benefit of this research to increase the accuracy of our aim. Further, there was not the same number of men in each department in 1913 as in 1919, and this variation further accounts for the variation in the weighted average of daily earnings for the two years 1913 and 1919, respectively, i. e., there was a proportionately greater number of low-rated men in the 1919 average than in the 1913 average, and that has had its effect in reducing the average wage for 1919, although all classes of labor have as "classes" the same relative increase of 81.6 per cent over their 1913 average daily wages.

The result of this voluntary action on the part of the management is briefly summed up in the report in the following words:

(1) The majority of our men when they received this raise, and knew the circumstances under which it was given, were highly pleased with the company's attitude. Many of them expressed their personal satisfaction to their foremen, to their fellow workers, and to their friends in neighboring plants.

(2) It further established their faith in the watchfulness of the management over the conditions affecting the workers, and showed the workers that it was not necessary for them to resort to the prevalent methods of securing attention or recognition.

(3) It paved the way for further action on the part of the management in its work of installing scientific management principles to the operation of the business, and through this practical demonstration of the interpretation of Taylor's statement that the "principal object of management should be to secure the maximum prosperity for the employer, coupled with the maximum prosperity for each employee," our men have taken hold in a hearty manner and are assisting in many ways to achieve the ideals so admirably set forth in Taylor's Principles of Scientific Management.

* * * * *

The cost of this increase, as distributed over our annual production, will be relatively insignificant, for while this wage increase averaged 0.0364 cents per hour applied to each of 1,184 men, or, expressed otherwise, it was approximately 10 per cent increase in its net effect on our annual pay roll, we can see wherein the reduction of wasted effort and the practice of other economies as the result of improved methods of management will more than compensate for this increase.

But this is not the end of it all! By standardizing our method, and by semiannual or quarterly review of the changing prices, we will continue to make adjustments in recognition of the cost of living whenever conditions warrant such action. In other words, it will be treated as a perfectly proper and legitimate factor in our business affairs.

Increases in Pay of Policemen in the District of Columbia.

EARLY in December, 1919, Congress passed a bill granting the policemen of the District of Columbia an increase in their basic compensation. This bill was approved and became law on December 5. The act (Public No. 94) is the final result of much investigating and discussion by Congress and is of special interest by reason of the circumstances which surrounded its passage.

For a considerable length of time an agitation had been going on to increase the salaries of the policemen of the District of Columbia. Owing to the delay of Congress to act, the policemen, who were organized, affiliated their organization with the American Federation of Labor. The policemen's organization had a constitution prohibiting them from striking. A controversy immediately arose between the policemen and the District of Columbia Commissioners, who were opposed to this affiliation. This controversy attracted little attention in Congress until the police of Boston, who were similarly organized and affiliated, went on a strike in spite of their constitutional prohibition and left that city defenseless against looting mobs. This, bringing the matter to the attention of Congress, hastened action on the bill and also led finally to the amendment of paragraph No. 9. By this paragraph, as amended, the policemen are forbidden to become members of, or affiliated with, any organization that uses the strike as a means of settling controversies. This section, as amended, reads as follows:

PAR. 9. No member of the Metropolitan police of the District of Columbia shall be or become a member of any organization, or of an organization affiliated with another organization, which itself, or any subordinate, component, or affiliated organization of which holds, or claims, or uses the strike to enforce its demands. Upon sufficient proof to the Commissioners of the District of Columbia that any member of the Metropolitan police of the District of Columbia has violated the provisions of this section it shall be the duty of the Commissioners of the District of Columbia to immediately discharge such member from the service.

Any member of the Metropolitan police who enters into a conspiracy, combination, or agreement with the purpose of substantially interfering with or obstructing the efficient conduct or operation of the police force in the District of Columbia by a strike or other disturbance shall be guilty of a misdemeanor and upon conviction shall be punished by a fine of not more than \$300 or by imprisonment of not more than six months, or by both.

No officer or member of the said police force, under penalty of forfeiting the salary or pay which may be due him, shall withdraw or resign, except by permission of the Commissioners of the District of Columbia, unless he shall have given the major and superintendent one month's notice in writing of such intention.

In the Senate it was sought by the so-called Meyer's amendment to extend the provisions of this paragraph to all organizations of Government employees, but this failed to secure the approval of the House, and the measure was finally passed without the amendment.

The act is an amendatory act, amending chapter 623 of the Acts of 1901 as amended by chapter 3056 of the Acts of 1906. Paragraph 2 of the original act is amended so as to place the policemen under the provisions of the civil-service laws. The provisions having to do with the classification of privates were also altered. There will be three classes for privates as formerly, but the periods of service in the respective classes are changed so that after one year's efficient service privates in class 1 are automatically promoted to class 2, and, after two years' efficient service in class 2, they are automatically promoted to class 3, which is the highest class for privates.

Paragraph 8 of the original act fixes the basic salaries of the members of the entire police force. This paragraph was amended by the new act, increasing the salaries of all the policemen from privates of the first or lowest class to the major and superintendent. One of the features of this paragraph is that its provisions are made retroactive from August 1, 1919. In the appropriation bill (Public No. 6), of July 11, 1919, making appropriations for the District of Columbia, temporary increases were made in the salaries of the members of the police force, so that the present increases are not so great as they appear to be when compared with the basic salaries as fixed in 1906. In addition to the increased salaries allowed by this act the policemen also receive the \$240 annual bonus allowed to District and Federal employees. The basic salaries of 1906, the temporary salaries of the appropriation act of July 11, 1919, and the new basic salaries as fixed by the present act, together with the present salaries plus the bonus, and the accumulated retroactive pay figured on a basis of 4½ months are shown in the following table, which also shows the changes made by this law in the salaries of the park watchmen who are henceforth to be known as the park police. The park police are Federal employees as distinguished from District of Columbia employees and constitute no part of the Metropolitan police force of the District of Columbia.

COMPENSATION OF THE METROPOLITAN POLICE AND PARK POLICE OF THE DISTRICT OF COLUMBIA.

Increases in British Army Pay.¹

UNDER the provisions of two royal warrants issued as army orders on September 13, new rates of pay, half pay, and retired pay for officers, and increases in the pay and pension of soldiers are established.

In the case of officers the new rates of pay, which operate as from July 1, 1919, are granted in consideration of the present high cost of living and will be subject, after five years, to revision, either upward or downward, to an extent not exceeding 20 per cent, according as the cost of living rises or falls. After July 1, 1924, a further revision may take place every three years. These provisions do not apply to other ranks.

During the war increases in rates of pay were granted at various dates. In the following table, however, the rates in force at August, 1914, and immediately prior to the operation of the new scales only are given for comparative purposes. It should be noted, however, in considering the comparison, that prior to the recent changes, captains, lieutenants, and second lieutenants received allowances of £2 [\$9.73] a month for each child (up to a maximum of four) and majors received a similar allowance of £1 [\$4.87] a month. These allowances were not in operation at August, 1914, and they will cease as from January 1, 1920.

RATES OF PAY AND AMOUNT OF ALLOWANCES OF CERTAIN OFFICERS IN THE BRITISH ARMY AT AUGUST, 1914, JUNE, 1919, AND JULY, 1919.²

Rank and date. ³	Regimental pay (per day) ⁴	Lodging, light, and fuel allowance (per day).	Ration and messing allowance (per day).	Total, including command pay for lieutenant colonel (per day).
Lieutenant colonel:				
August, 1914.....	\$5.60	\$1.26		\$8.07
June, 1919.....	6.93	\$1.28- .55	\$0.51	\$9.94- .55
July, 1919.....	11.56	2.07- 1.30	.51	16.57 or 15.67
Major:				
August, 1914.....	3.89	.91- .30	.08	4.89- .30
June, 1919.....	5.60	.95	.59	7.14
July, 1919.....	7.66	2.07 or .95	.51	10.24 or 9.12
Captain:				
August, 1914.....	2.82	.65	.08	3.55
June, 1919.....	4.38	.67	.59	5.64
July, 1919.....	5.72	2.07 or .67	.51	8.29 or 6.89
Lieutenant:				
August, 1914.....	1.58	.59	.08	2.25
June, 1919.....	3.77	.61	.59	4.97
July, 1919.....	3.89	1.58 or .61	.51	5.98 or 5.01
Second lieutenant:				
August, 1914.....	1.28	.59	.08	1.95
June, 1919.....	3.41	.61	.59	4.60
July, 1919.....	3.16	1.58 or .61	.51	5.25 or 4.28

¹ From The Labour Gazette (London), October, 1919, p. 420.

² Conversions in this and the following table are made on the basis of £1=\$4.867.

³ The rates quoted are the initial rates for each rank. In most cases officers received higher rates after certain periods of service.

⁴ Including, at June, 1919, the bonus paid to all officers who had not been released by 1st May.

The new warrant provides for lodging, light, and fuel allowances for married officers at higher rates than for those unmarried, and also grants furniture allowance to married men. In the above table, where two rates are quoted for July, 1919, the higher rate applies to married men and includes furniture allowance; the lower rate applies to unmarried men. As regards ration and messing allowances, no ration allowance was paid at August, 1914, but rations were allowed to those serving abroad; a messing allowance was paid, but this has been discontinued as from July, 1919.

The revised rates of pay for warrant officers, noncommissioned officers, and men also date from July 1, 1919, and it is provided that, where transfer to the new rates involves a loss of emoluments, the soldier may continue to receive his old rates until circumstances render them equal to or less than the new rates.

The following table shows a comparison between the new rates of pay for certain ranks in infantry regiments and those at the outbreak of war and at June, 1919:

RATES OF PAY FOR CERTAIN RANKS IN INFANTRY REGIMENTS IN THE BRITISH ARMY AT AUGUST, 1914, JUNE, 1919, AND JULY, 1919.

Rank.	Regimental pay per day.			Proficiency pay per day (if qualified).		
	Aug., 1914.	June, 1919. ¹	July, 1919.	Aug., 1914. ²	June, 1919. ³	July, 1919. ⁴
Regimental sergeant major....	\$1.22	\$2.01	\$3.41	\$0.12	\$0.12	
Regimental quartermaster sergeant.....	.97	1.64	2.92	.12	.12	
Company sergeant major.....	.97	1.04	2.43	.12	.12	
Company quartermaster sergeant.....	.85	1.52	2.31	.12	.12	
Sergeant.....	.57	1.12	1.70	.12	.12	
Corporal.....	.41	6.91	1.22	\$0.06 or .12	\$0.06 or .12	\$0.12
Private.....	.24	5.73	6.67	.06 or .12	.06 or .12	.12

¹ Including bonus paid to all soldiers who had not been released by 1st of May, but excluding war pay of 1d. (2 cents) per day for each year's service since Aug. 4, 1914.

² After 2 years' total service.

³ After 6 months' total service.

⁴ After 1 year's total service.

⁵ The nominal rates at June, 1919, were 3s. 8d. (89 cents) for corporals and 2s. 9d. (67 cents) for privates; but it was provided that no corporal should actually receive less than 3s. 9d. (91 cents), and no private less than 3s. (73 cents). Where proficiency pay was earned, 1d. or 3d. (2 or 6 cents), respectively, of this pay was merged into the rates of 3s. 9d. (91 cents) and 3s. (73 cents).

⁶ 3s. 6d. (85 cents) after 2 years' service.

In addition to the increases in pay, there have also been additions to the separation allowances. In August, 1914, the allowance for a wife for sergeants, corporals and privates was 7s. 7d. (\$1.85) per week with an additional 1s. 2d. (28 cents) per week for each child. In June, 1919, the allowance for a wife was 15s. (\$3.65) for sergeants, and 12s. 6d. (\$3.04) for corporals and privates, with extra allowances of 10s. 6d. (\$2.56) for the first child, 8s. (\$1.95) for the second, 5s. 6d. (\$1.34) for the third, and 4s. (\$0.97) for each additional child. This scale remains in operation under the new warrant, but it is subject to revision on January 1, 1920.

Standard Rates of Pay of Officers and Crews of Italian Merchant Marine.

Translated by ALFRED MAYLANDER.

LA Vita Marittima e Commerciale¹ reports the results of a collective agreement concluded by Italian shipowners and the Seamen's Federation (*Federazione dei Lavoratori del Mare*). The agreement which became effective July 1, 1919, fixes standard rates of pay, hours of labor, and working conditions of the navigating and engineer officers, surgeons, pursers, petty officers, seamen, carpenters, cooks, bakers, stewards, etc., of the Italian merchant marine. The principal results of the agreement are reproduced below in the tables and annotations to the tables.

Steamships.

Officers.

The following two tables show the standard monthly rates of the basic pay, bonuses, clothing, entertainment, and active sea service allowances, pension-fund contributions, and wage increases of officers in the passenger and cargo service of transatlantic and subsidized steamship lines and of those in the cargo service of independent shipowners.

¹ La Vita Marittima e Commerciale, August, September, and October, 1919. Genoa.

¹ The basic salary for these grades is fixed by individual contract.

Notes Relating to All Shipping Lines.

War bonus for active sea service.—Officers are granted a daily war bonus amounting to 6 lire in the case of captains and chief engineers and to 5 lire in that of officers of lower rank for each day of actual navigation in all seas and while stopping in ports of the Adriatic and Ionic Seas and in those of the Aegean coast, Libya, the Red Sea, and of Italian Somaliland. The computation of this bonus is based on the assumption that under normal conditions a steamer navigates on an average of 20 days per month, with the exception of steamers of the subsidized companies Marittima and Italiana in the Mediterranean service, in the case of which 15 days is assumed to be the average number of days of actual navigation.

Infected ports.—If a steamer sails for ports officially pronounced infected and does not go into quarantine, its officers and crew are entitled to a bonus for the period beginning with the departure from the last port preceding the infected port and ending with the arrival in the next port. In the case of transatlantic and subsidized lines this bonus is to amount to 15 per cent of the basic pay and in the case of steamers of independent owners to 10 per cent.

Notes Relating to Transatlantic and Subsidized Lines.

Pension fund.—These companies contribute to the pension fund of each officer a sum equal to 7.5 per cent of his basic pay.

Profit sharing.—The navigating officers, engineers, and surgeons of passenger steamers are to receive a share of the steamer's receipts of every voyage and of the savings in the consumption of coal and lubricants. This share may not be less than 10 per cent of their basic pay. The pursers are to share in a somewhat greater measure in the savings in the commissary department.

Service premiums.—Ships' officers shall be entitled to a service premium of 10 per cent of their monthly basic pay for each five years of continuous service in the same grade. This provision shall be applicable to not more than four quinquennia. If in case of promotion the new salary, owing to the formerly drawn service premiums, is inferior to the salary received before promotion the promoted officer shall be entitled to the difference between the two salaries.

Service in a higher grade.—An officer intrusted with the duties of a higher grade than his own shall be entitled to the pay of the higher grade if he is employed on steamers of transatlantic companies, and to a bonus equivalent to three-fourths of the difference between his own pay and that of the higher grade if he is employed on steamers of subsidized companies.

Hours of service in port and at sea.—The hours of actual service of ships' officers shall be eight hours per day in offices on land as well as on board in port and at sea.

Overtime.—Work performed beyond the normal hours of service on Sundays, May 1, and all legal holidays shall be compensated at the rate of 1 lira per hour. Work performed in anchoring a ship or in weighing anchor on arrival and departure, in moving the ship while in port, in the loading and unloading of mail and baggage, in calculations of navigation, as well as all work performed in the interest of the safety of the ship, passengers, and cargo, shall not be considered as overtime work.

Night watch in port.—One navigating officer and one engineer must alternate in remaining on board nights and on holidays in case of possible emergency. These officers shall be entitled to 24 hours' leave, beginning at 8 a. m. of the day following the night watch, unless the commanding officer disposes differently for very serious reasons of service.

Annual leave.—If compatible with the exigencies of the service ships' officers shall be granted 20 days of annual leave. In case that for unforeseen service reasons the company should not be able to grant such leave the officer shall be entitled to extra pay for the days of leave lost. Extraordinary leave not in excess of three days shall not be deducted from the annual leave.

Disembarkment owing to disarmament.—Officers disembarked owing to the putting out of commission of their ship or for any other service reason shall hold themselves at the disposal of the company and shall be entitled to full pay and sustenance for the entire duration of their disembarkment. They shall, however, be obligated to render service on board or on land and in the localities determined by the company.

Sickness.—In case of sickness officers shall be entitled to full pay for the first six months, half pay for the next six months, and to one-third of their pay for further six months. If the sickness has been caused by the service, the officer shall in addition to full pay be entitled to sustenance up to his full recovery, but not for a period in excess of 18 months.

Industrial accidents.—If an officer becomes the victim of an industrial accident while in service, and consequent to such accident is discharged by the company he shall receive as compensation of all his claims arising from the accident a sum equal to four years' pay in case of permanent total disability and to two years' pay in case of permanent partial disability. If the accident is fatal, his surviving heirs (wife, descendants, ascendants, and collaterals up to the third

degree) shall receive a sum equivalent to four years of his pay as full compensation of all their claims.

First-class sustenance.—Captains, chief engineers, and surgeons shall be entitled to first-class sustenance.

Notes Relating to Transatlantic Companies Only.

Clothing allowance.—These companies grant to their officers a monthly clothing allowance of 20 lire.

Bonus for compilation of the pay roll.—The officer charged with the compilation of the pay roll and the paying of the crew receives a monthly bonus of 25 lire.

Notes Relating to Subsidized Companies Only.

Entertainment.—The captains of the subsidized companies Italiana, Marittima, and Sicilia receive a monthly allowance of 30 lire for entertainment.

Bonus for electric light service.—An allowance of 30 lire per month granted for electric light service shall be divided by the two engineer officers of lower grade.

Voyages beyond the Straits.—The following monthly bonuses are to be paid to officers of cargo steamers of the companies Italiana and Sicilia for voyages beyond the Straits:

Captain, chief engineer.....	125 lire.
First mate, first engineer.....	75 lire.
Second and third mate, second and third engineer.....	60 lire.

Officers of passenger and cargo steamers of the company Marittima are to receive the following bonuses for each voyage beyond the Straits:

	To Bombay.	To Benadir.
Captain, chief engineer.....	200 lire.	250 lire.
First mate, first engineer.....	100 lire.	140 lire.
Second mate, second engineer.....	50 lire.	90 lire.
Third mate, third engineer.....	40 lire.	60 lire.

As each steamer on an average makes four such voyages, the officers of steamers sailing beyond the Straits receive monthly about one-third of the bonus specified above.

Steamers stationed abroad.—On steamers stationed abroad officers are to receive the following monthly bonuses:

Captain, chief engineer.....	50 lire
First mate, first engineer.....	30 lire
Second mate, second engineer.....	20 lire
Third mate, third engineer.....	15 lire

Notes Relating to Independently Owned Steamers.

General.—The rates of pay shown in the table relate exclusively to officers with certificate of master of ocean steam vessels or of first engineer and are to remain in force as long as the standard freight rate from Cardiff to Genoa remains higher than 12 shillings in gold. The rate of pay of officers not possessing such certificates is to be fixed by individual agreement with the shipowner.

Hours of service in port.—The actual hours of service in port shall be eight hours per day during winter and nine hours during summer for deck officers as well as engineer officers.

Division of the watch.—During navigation the watch of the deck officers shall be divided into two turns and that of the engineer officers into three (4 and 8).

The watch of the deck officers shall begin after the vessel has left port and is in a condition satisfactory to the captain. That of the engineer officers shall begin with the firing of the boilers preparatory to departure.

Maintenance of auxiliary machinery.—During navigation the engineer officers shall perform the usual maintenance and repair work on winches and other auxiliary machinery.

Night watch.—One deck officer and one engineer officer shall alternate in staying on board nights and on holidays in case of possible emergencies.

Crew.

In the following tables are shown the standard rates of basic pay and all bonuses and allowances of all members of the crews of transatlantic and subsidized steamship lines and of those in the service of independent shipowners.

Storekeeper for the crew.....	120	90	40	30	30.00	100	410.00	20	430.00

¹ Normally the value of the lira is 19.3 cents.

² Carpenters are entitled to a monthly allowance of 3 lire as compensation for the use of their own tools; which are to be insured for 300 lire at the expense of the shipping company.

³ Able seamen rated as steersmen, cargo watchmen, captain of the hold, as well as firemen, oilers, chief guards, and seamen and apprentices assigned to winches are entitled to a monthly bonus of 5 lire.

⁴ A linen-room steward is carried only on steamers with accommodations for more than 100 cabin passengers.

⁶ The wages of the chief cook and chief pastry cook are to be regulated by individual contract.

¹ Optional.² For the first 6 months of service the basic pay is from 30 to 40 lire (\$5.79 to \$7.72), after 6 months from 40 to 60 lire (\$7.72 to \$11.58).*Notes Relating to All Shipping Lines.*

War bonus for active sea service.—What has been said about this bonus in the notes relating to rates of pay of ships' officers is also applicable to crews, with the sole difference that in the case of crews this bonus amounts to 2.50 lire per day for petty officers, and to 1 lira for all other members of the crew.

Infected ports.—The note relating to officers is also applicable to crews.

Monthly leave.—Provided that the captain thinks it compatible with the exigencies of the service, each member of the crew shall be granted 24 hours leave per month of service. Such leave is to be taken in the home port, and if not used each month may be accumulated during the same year. Accumulated leave which can not be used owing to service exigencies is to be compensated with one day's pay for each day of leave lost. On steamers of independent owners such compensation of lost leave is only compulsory if the member of the crew has served continuously for at least one year on steamers of the same owner.

Donkey boiler fireman.—The fireman assigned to the donkey boiler is to receive a monthly bonus for the maintenance, heating, and operation of this boiler. On steamers of the transatlantic and subsidized lines this bonus shall amount to 10 lire, and on steamers of independent owners to 15 lire.

Notes Relating to Transatlantic and Subsidized Lines.

Profit sharing.—The deck and engine crew of transatlantic companies receive a share of the traffic receipts of each voyage and of the savings in fuel and lubricants; the cooks, stewards, storekeepers, etc., share in the receipts from the sale of food. The subsidized companies grant only to the engine crew a share of the savings in fuel and lubricants.

Linen and bedding.—Petty officers, mechanics, electricians, and stewards are furnished linen and bedding by the companies.

Uniforms.—These companies furnish two uniforms per year to the deck and cabin crews. The trans-Atlantic companies pay one-half of the cost of the uniforms and the subsidized companies one-third.

Hours of labor at sea.—At sea the watch of the deck crew shall be divided into two turns, four hours of watch alternating with four hours of rest, with relief from 4 to 6 p. m., and from 6 to 8 p. m. during the watch below.

The watch of the engine crew shall under normal conditions be divided into three turns, four hours of watch and eight hours of rest.

In no case shall a fireman attend more than three furnaces or handle more than 4 tons of coal during 24 hours.

Work performed in excess of these hours shall be considered overtime work, unless performed in the interest of the safety of the ship, passengers, or cargo.

Apprentices under 16 years of age shall be excluded from night watch service and may not work more than 10 hours per day with a two-hour intermediate rest.

The hours of labor of the cabin and kitchen crew and captains of the hold shall be regulated according to the exigencies of the service.

Watch at sea.—The watch at sea begins for the engine crew: (a) With the firing of the boilers if this takes place before noon of the day previous to departure; (b) at noon of the day previous to departure if the boilers are being fired within the 24 hours of the day previous to departure; and (c) at noon of the day of departure, if the boilers are being fired on the day of departure. The first watch shall be given four hours off-duty before it begins its turn.

On arrival in port and after termination of the watch the crew shall be given eight hours off duty before being called upon to do

port service. The watches off duty must also be given eight hours off before being called upon for service.

For the deck crew the watch at sea begins at noon of the day of departure. On departure and on arrival of the vessel each member of the deck crew must be at his post and remain there until the vessel has settled into its course or anchored. On the arrival in port and after the vessel has been anchored the crew on duty must, after termination of the watch, be given four hours off before being called upon for port service, nor may the watch which on arrival was off duty be called upon for service until it has had four hours off.

Hours of labor in port.—The normal daily hours of labor in port of the entire crew shall be eight, distributed as follows: During the summer from 7 to 8 a. m., 9 to 12 noon, and 2 to 6 p. m. During the winter from 8 a. m. to 12 noon, and from 1 to 5 p. m. When traffic or special local conditions require it, the captain of the vessel may order a differing arrangement of the hours of labor. The total daily hours of labor may, however, not exceed eight.

Stewards and cabin boys assigned to waiting on ships' officers shall with the exception of days of departure be given shore leave after supper, but must return on board by 10 a. m. of the following day.

Overtime.—The notes on this subject relating to officers apply also to the crew. Compensation for overtime to be made at the following rates per hour: Petty officers, 0.60 lira; able seamen, 0.50 lira; ordinary seamen, cabin and mess stewards, and boys, 0.40 lira.

On arrival in the home port or in an Italian port of final destination the crew off watch duty may not be compelled to work overtime unless this is required for the safety of the ship, passengers, and cargo.

Loading and unloading.—With the exception of captains of the hold assigned to watching the cargo, the deck crew assigned at whatever hour to the loading or unloading of cargo shall be entitled to extra pay at the rate of 0.50 lira per ton, 0.05 lira per empty barrel, 0.25 lira per head of large animals, and 0.10 lira per head of small animals, if the work is performed on a piecework basis. Otherwise the crew shall receive regular overtime pay for such work.

Night watch in port.—Nights and on holidays one-half of the deck crew and one-third of the engine, cabin, and kitchen crew must stay on board against possible exigencies. On steamers of subsidized companies on which the deck crew numbers 15 or more men and on those of transatlantic companies on which the deck crew numbers 24 or more men the deck crew shall also be divided into three turns.

Members of the crew on actual night watch duty are on the following day entitled to a continuous rest equal in duration to that spent on night watch duty and in any case of not less than six hours.

Mechanics, electricians, and members of the cabin and kitchen crew, who have remained on board for night watch duty, are entitled to leave beginning at noon on the following day.

Notes Relating to Independently Owned Steamers.

General.—The rates of pay shown in the preceding tables are to remain in force as long as the standard freight rate from Cardiff to Genoa remains at 23 shillings in gold.

Hours of labor at sea.—At sea the watch of the deck crew shall be divided into two turns alternating every four hours with relief from 4 to 6 p. m. and from 6 to 8 p. m. during the watch below.

The watch of the engine crew shall under normal conditions be divided into three turns, four hours of watch and eight hours of rest.

The work of firemen shall be so regulated that as a rule each fireman shall handle from 4 to 5 tons of coal per day.

On steamers which can turn around to the right and left firemen shall receive a supplemental monthly bonus of 19 lire and trimmers one of 12.50 lire.

In case of sickness of firemen and trimmers the other firemen and trimmers must divide the turn of the watch in the most convenient manner, subject to approval by the chief engineer and without claim to extra pay.

Members of the crew who have not completed the fourteenth year of age are exempt from night work and may not work more than 10 hours of every 24 hours.

Watch at sea.—The watch at sea begins for the engine crew with the firing of the boilers preparatory to departure.

On arrival in ports in which the steamer stops more than 24 hours and the watch at sea is discontinued the deck watch must wipe and clean the engine aided by the fatigue watch. After this work has been finished these two watches are entitled to six hours' rest before doing port service.

The watch below deck resumes port service after having had its leave.

For the deck crew the watch at sea begins after the vessel has left port and after the deck is in a condition satisfactory to the captain.

At sea the deck crew in addition to navigating service must also attend to the cleaning and maintenance of the steamer from 6 a. m. to 6 p. m. during summer and from 7 a. m. to 5 p. m. during winter.

Hours of labor in port.—The normal daily hours of labor for the entire crew (deck and engine) shall be eight hours during the winter and nine hours during the summer, distributed as follows: During the summer from 6.30 to 8 a. m.; from 8.30 a. m. to 12 noon; from 2 to 6 p. m. During the winter from 8 a. m. to 12 noon, and from 1 to 5 p. m.

The hours of labor of the cabin, mess-room, and kitchen crew will be determined by the captain in accordance with the exigencies of the service.

Overtime.—Overtime work on Sundays, May 1 (where this holiday is observed by other classes of workers), and on holidays considered legal holidays in the various ports in which the vessel is stopping shall be compensated at the rate of 0.70 lira per hour in the case of petty officers, of 0.60 lira in the case of able seamen, and of 0.50 lira in that of ordinary seamen and apprentices. On the above holidays the crew must perform two hours' service in cleaning quarters.

The kitchen and cabin crew shall not be entitled to extra compensation for the discharge of its duties nor shall extra compensation be paid to any member of the crew for work performed in the interest of the safety of ship, passengers, and cargo.

Night watch in port.—Nights and on holidays one-half of the crew must remain on board against possible exigencies. Unless otherwise provided, the captain shall designate one or more persons for active watch service, who on the following day shall be entitled to as many hours of rest as were spent by them on night watch duty.

On holidays half of the crew not on watch shall be excused from presenting themselves on board, unless for service reasons all or part of them were previously requested to be present.

Sailing Vessels.

A tentative collective agreement as to the rates of pay and working conditions of officers and crews of sailing vessels has been submitted by the Italian Seamen's Federation (Federazione dei Lavoratori del Mare) to the shipowners. The latter have agreed to pay the wages stipulated in the schedule shown below, but have not consented to the working conditions laid down in the tentative agreement, which are still under discussion by the two parties. The rates of pay agreed upon are the following:

STANDARD MONTHLY RATES OF PAY (IN LIRE¹) OF OFFICERS AND CREW ON ITALIAN SAILING VESSELS, EFFECTIVE JULY 1, 1919.

Occupation.	Rate of pay.		Occupation.	Rate of pay.	
	With board.	Without board.		With board.	Without board.
Captain.....	540	700	Able seaman.....	300	400
Mate.....	400	500	Ordinary seaman.....	250	350
Boatswain.....	350	450	Boy.....	200	300
Steward.....	315	415	Apprentice.....	150	250

¹ Normally the value of a lira is 10.3 cents.

Notes.

Cost-of-living bonus.—In addition to the monthly rates of pay shown in the preceding table the officers and crew are entitled to receive a cost-of-living bonus. Shipowners are to pay this bonus to the Seamen's Federation for the purpose of establishing the cooperative society Garibaldi. The monthly bonus of captains has been fixed at 60 lire, that of the mate at 50 lire, and that of the crew at 45 lire.

Captains with certificate.—If the captain or mates are in possession of certificates as masters of ocean vessels or of long coastwise trade (*Gran Cabotaggio*), the monthly rate of pay, with board, of the captain shall be 1,100 lire, of the first mate 800 lire, and of the second mate 500 lire. In such a case, however, the captain and the ships' officers shall not be entitled to compensation in case of shortage of the crew, nor shall the captain receive 2 per cent of the freight receipts.

Voyages beyond the Straits.—On voyages beyond the Straits the entire personnel of the ship shall be entitled to a bonus of 100 lire per month.

Shortage of crew.—If for any reason whatever the crew is short one or more persons and these can not be replaced, their pay and board shall be distributed among the crew, inclusive of the captain.

Share of the freight receipts.—In addition to his contractual pay the captain shall receive 2 per cent of the freight receipts of each voyage.

Infected ports.—Whenever a vessel undertakes voyages to infected or malarious ports, the crew shall be entitled to a bonus of 20 per cent of the basic pay from the day of the departure of the vessel for the infected port up to the date of arrival at this port and from the day of departure from the infected port up to the day of arrival in the port of destination.

Extension of enrollment.—If on expiration of the enrollment the vessel is in a foreign port and the crew ships for the home voyage, it shall be entitled to a bonus of 15 per cent of the basic pay for the entire period of extension of the enrollment.

Changes in wage rates.—If during the period of enrollment the pay rates shown in the preceding table are increased or decreased by order of the Seamen's Federation, such increases or decreases shall be applicable to the crew.

Monthly leave.—Members of the crew shall, if in the opinion of the captain this is compatible with the exigencies of the service, be entitled to 24 hours' leave for each month of service, such leave to be granted during sojourn in ports. If for service reasons such

leave can not be granted the leave lost shall be compensated for with double pay.

Hours of labor at sea.—Watch service at sea shall be performed according to usage. The watch below may, however, not be called upon for service except in the interest of the safety of ship and cargo in cases of force majeure.

If during a voyage the crew is ordered to throw the ballast overboard, such work shall be considered extra work and be compensated at the rate of 1 lira per ton, unless the throwing overboard of the ballast is done for reasons of safety of the vessel and cargo.

Hours of labor in port.—In port the hours of labor shall be the same as those observed by the customhouse. Sundays, May 1, and legal State holidays shall be considered holidays.

Overtime.—Work performed on week days beyond the regular hours of labor shall be compensated at the rate of 1 lira per hour, and overtime work on holidays at 1.5 lire per hour.

Accidents.—All members of the crew shall be insured by and at the cost of the shipowner against industrial accidents for the period and on the basis of the monthly rates provided for in the accident insurance law. Any member of the crew who has not been or can not be insured shall be compensated by the shipowner in the same manner as if he had been insured.

Shorter Working Day in German Coal Mines.

COAL miners of the Ruhr district in Germany having made demands for a six-hour shift, the minister of labor, in accordance with a decree of June 18, 1919, appointed a commission to investigate the question of working hours in the Ruhr mining industry. The mine owners' associations, the three great miners' associations, and the salaried employees' associations were represented on this commission. There were in addition medical representatives and experts from other mining districts. The commission, with Dr. Ernst Francke presiding, sat 18 times and thoroughly examined the question of the reduction of working hours in the hard-coal mines of the Ruhr district. Experts named by the commission were called to give evidence, and mines, specified by mine owners as well as by miners, were visited for inspection. An article in *Soziale Praxis*¹ reports the results of the inquiry as follows:

The commission divided the field of inquiry into two parts. First, the socio-political aspect was considered, particularly from the point of view of health considerations. Then the economic and technical side of the problem was discussed.

¹ *Soziale Praxis und Archiv für Volkswohlfahrt.* Berlin, August 28, 1919.

The commission was unanimous in stating that from the point of view of health a shorter shift would be advantageous. Already the shortening of the shift by $1\frac{1}{2}$ hours, taken in conjunction with other factors, showed unmistakable results. It was not possible to supply a statistical statement showing the exact extent to which the improvement was the result of shorter hours or was produced by the other factors. It is certain, however, that the shorter shift played a very important part, and it is to be expected that the full effects of the shortening of the shift by $1\frac{1}{2}$ hours will be seen in the better state of health of the workers. It has not been possible to reach the position which had been attained before the outbreak of the war, but taking all conditions into consideration, this position has almost been reached. The miners' representatives and the mine owners' representatives draw opposite inferences from this ascertained fact.

The miners' representatives held that a further reduction of working hours would serve a good purpose. The mine owners' representatives considered such a reduction unnecessary. The improvement in the food supply played an important part, and an increase of rations—particularly of fats—was recommended by all members of the commission.

It was no easy task to make an international comparison, because of varying customs. A long discussion took place on this point. In the opinion of the miners' representatives the German miner is worse off than the British miner. The mine owners' representatives were of the opinion that he is better off. Both sides agreed that miners have a longer shift in Belgium and France than in Germany. A great deal of time was spent in dealing with the question of the effects of the reduction of working time by one and one-half hours—(1) on the working time; (2) on the time for hauling coal; and (3) on the output.

The parties were unable to arrive at an agreement. The employers declared that in any event they feared a further reduction of output as a result of shorter hours. The workers, however, while admitting a slight reduction during the transition period, regarded the shortening of working hours as the best means in the long run of encouraging a man to take pleasure in his work and thus increase his output. It would also have the effect of encouraging men to take to mining as an occupation and thus increase the supply of labor. In this way the total output would be increased.

The employers regard the diminished output since the reduction of hours as a proof of their contention. The percentage of diminution is attributable to the reduction of hours and is, to say the least, in proportion to the reduction of hours. A further proportionate diminution must be anticipated as the result of a further reduction of hours. Probably a still further diminution even will result, because with diminished production almost the same amount of nonproductive work is involved, with the result that the final effect will be more adverse. The fact that any reduction of hours affected not the nonproductive part of the shift but the actual work of production brought about still worse results.

On the last point the workers had other views. They regarded it as practicable that, by means of arrangements which were to be discussed later, the reduction of hours might affect the nonproductive part of the shift and not the time spent in actually getting the coal.

The nonproductive part of the shift can (in the opinion of the workers) be shortened if the men be conveyed to and from the coal face. Some of the

workers' representatives were of the opinion that a regular service by means of a cable railway would have this effect. The employers and the other workers' representatives, however, were of the opinion that it would not be advantageously practicable and that previous experience in transporting the workers to and from the actual place of work did not justify the hope that this method would be a success. Furthermore, the employers pointed out that the technical preparations for such a transport would take a long time. Nevertheless, they made a general recommendation that improvements should be made in this direction after the miners' representatives had expressed their willingness to cooperate.

The workers' representatives maintained, moreover, that the feared diminution of output would be avoided if various technical improvements were introduced. Special mention was made of an increased number of trucks and tubs for use in the pit and improvements in the use of compressed air. The employers, however, replied that everything possible had been done along these lines; that only a slow and slight increase in production could be anticipated; and that such measures would only slightly reduce the unfavorable effects of shorter shifts.

"More miners" was unanimously agreed upon to be the most effective means of compensating for shorter hours. A larger supply of labor is dependent in turn on more housing accommodation and on the general condition of the labor market, and last, but not least, on an amendment of the unemployment grant. Improvement along these lines would require time.

But if it be calculated that the former level of output could be attained by these means there still remains the technical difficulty that if the "double hauling shift" is maintained this haulage is crowded into such a brief space of time that it could not be dealt with except by completely changing the methods of haulage. It was unanimously agreed that such a change would involve a long period and heavy cost. The workers' representatives therefore suggested that hauling should be done during three shifts. The employers objected that this would mean a disproportionate increase in the number of workers, and that the repair work would be seriously affected, because though the few available hours under a triple haulage shift system might be sufficient for repair work in the headings they would be utterly inadequate for repair work in the shafts, main haulage ways, self-acting inclined planes, and the establishments above ground. Therefore a technical limit is set which is insurmountable. The miners, however, considered that there would be sufficient time for repair work in the shafts, main haulage ways, and pitheads. The workers, basing their arguments on the above-mentioned views as to technical and economic problems, have come to the conclusion that a shortening of the shift might perhaps result in a slight temporary reduction of output, but that this would soon be changed into a considerable increase in total output. The employers, on the other hand, are convinced that a shortening of the shift would inevitably result in a substantial diminution of output and that only a partial compensation would be possible even if a long period were allowed to secure an increased supply of labor, to build dwellings and to transform the plant and machinery. The scientific members of the commission supported this view.

The effect on the economic side of the matter would be seen in increased cost of production for mining enterprises. This, in turn, would bring about increased prices for coal and increased prices generally, and it would inevitably

cause a further drop in the value of the mark. The three sections of the commission were of one mind on these points. The workers, however, maintained that the effects of a four-shift system on output would bear such fruitful results throughout the whole of the industry, trade, and commerce of the country as to compensate for the expected unfavorable results.

There was perfect agreement in regard to the severe shortage of coal which is to be expected during the coming autumn and winter. This was realized after the coal commissioner's representative had made his report. A comparison of this year's conditions with last year's shows that no stocks have been laid in; output has dropped to two-thirds of the normal; the Entente demands many millions of tons of coal. Truly, a disconsolate picture.

With due consideration of the socio-political questions involved, particularly questions of health, also technical and economic questions and the situation with regard to the coal supply, the various sections of the commission tabled the motions which follow. In order to render agreement easier of attainment the miners' representatives postponed the date for introduction of the six-hour shift to four months from the date fixed in their original motion, and the mine owners' representatives dropped a part of their own original motion in favor of the wording of a motion as drawn up by the scientific representatives.

Miners' Motion.

1. That the National Government be asked by the commission to approach the other Powers with the proposal that the six-hour shift be introduced for work below ground in coal mines by means of an international convention. (Vote: 6 for; 12 against.)

2. That the commission should be declared a permanent institution by the minister of labor, in order that he may be in a position to investigate all technical and other preparations for the introduction of the six-hour shift, which shall become effective not later than February 1, 1920. (Vote: 6 for; 12 against.)

Scientific Representatives' Motion.

1. The same as (1) above. (Vote: See paragraph 1 above.)

2. That the commission be declared permanent—retaining its present powers and authority—by the minister of labor. It shall continue to investigate by means of expert equipartisan committees whether all technical and other preparations to render possible the introduction of the six-hour shift are being carried out in the individual mines and by all authorities concerned. The commission shall meet again at the end of November in order to examine the evidence and decide whether or not the six-hour shift can be introduced on February 1, 1920, without endangering the coal supply of Germany. (Vote: 6 for; 12 against.)

Mine Owners' Motion.

1. That the commission request the National Government to approach other Powers forthwith through diplomatic channels for the purpose of bringing about an international convention with respect to the introduction of the six-hour shift in hard-coal mines. (Vote: 6 for; 12 against.)

2. That the commission be declared permanent—retaining its present powers and authority—by the minister of labor. It shall continue to investigate by means of expert equipartisan committees from among its midst whether all technical and other preparations for the purpose of increasing the output are being carried out in the individual mines and by all authorities concerned. The commission shall meet again at the end of November in order to examine evidence and decide whether a further reduction of the hours of labor of workers below ground in mines be feasible without endangering the coal supply of Germany. (Vote: 6 for; 12 against.)

Possible Harmful Effects of a Shorter Shift.

In this connection an article in the *Deutsche Tages-Zeitung* on possible harmful effects of a shorter shift deserves mention. The Essen correspondent of this paper writes as follows:¹

The considerable reduction of working hours obtained by the miners as a result of their determined action appears to the great bulk of the miners to go not nearly far enough, so that they are pressing for a six-hour shift. At miners' meetings the impression is always given that the shortened hours are necessary on account of undernutrition. But the attentive observer in the Rhenish-Westphalian mining district will discover that the free time resulting from the seven-hour shift is not devoted to recreation, but to subsidiary work done for money. This practice has increased to such an extent that it endangers the employment of others. Thus the building workers make an appeal in the *Westfälische Allgemeine Zeitung* to the local miners not to take the bread out of the mouths of the bricklayers by working seven to eight hours a day in addition to their mining shift. Similar complaints have been made from Bochum and Recklinghausen. This abuse not only contributes to keep the coal output down, but it also increases unemployment in many trades and makes it permanent. In every town there are thousands of unemployed obtaining relief at a high cost to the State. This supplementary work of the miners robs these men of the possibility of earning their own living. Of the 5,000 unemployed in Essen, more than 2,000 could find work if no supplementary work were being done.

¹ Quoted in *Die Konjunktur*, Berlin, July 10, 1919.

Have Wage Increases Improved the Economic Condition of German Workers?

THE question as to whether wage increases have improved the economic condition of German workers is discussed in the *Metallarbeiter-Zeitung*,¹ the official organ of the German Metal Workers' Federation, which is one of the largest and most influential of German trade-union organizations. The question is answered in the negative, and the salient points in this discussion are here quoted in full:

Before the war it was obvious that only a part of the rise in wages wrung from the employers by the workers was a gain, as the greater part was swallowed up by the ever-increasing rise in the cost of commodities. The workers are seeking a net improvement of their living conditions, which finds some expression in the fact that the national wealth has risen in value by about 98,000,000,000 marks yearly, and the struggle for the distribution of this increase between employers and employed goes on. Had it not been for the trade-unions, almost the whole of it would have gone into the pockets of the employers. The struggle by the trade-unions was for the raising of the status of the workers, and the justice of it was acknowledged by all but the most selfish and overreaching of the employers. The revolution has done much to enlarge the political freedom of Germany, but the economic position resulting from the war presses heavily on the people and threatens to crush them. The workers, manual and nonmanual, do not always find the rise in wages and salary enough to make ends meet. The war has reduced the purchasing power of money and it is still falling. The prices of all necessities of life have risen very seriously for various reasons: shortage and the fact that demand exceeds supply is a principal cause, but the substitution of a paper for a gold currency and the loss of the war itself are important factors. The result has been a widespread demand for higher wages, and since November, 1918, the wages have risen considerably, but no one can assert that the conditions of living have improved; it is impossible that they should, because the prerequisites are wanting.

If all wages and salaries were doubled to-morrow this would not necessarily represent improvement of the condition of manual and nonmanual workers, but rather an opposite tendency. This may be illustrated by the following example: Before the war the daily milk supply of Düsseldorf was 130,000 liters [34,342.8 gallons], and this was equivalent to one-third of a liter [0.352 quart] per capita based on a population of 400,000. The daily supply at present is 20,000 liters [5,283.5 gallons], or one-twentieth of a liter [0.0528 quart] per capita. Were the income of Düsseldorf multiplied by three the milk supply would not be increased, and a similar line of argument applies throughout the whole country. Taking milk only, there is no more to be had; there is a great shortage of milch cows, and those there are get bad food and too little of it. One of the results is that a portion of the milk is held up by profiteers for higher prices. Throughout the whole country there is only one-half of the foodstuffs that it contained before the war. This condition can not be remedied by raising wages and salaries or by the issue of paper money. In-

¹ *Metallarbeiter-Zeitung*, Stuttgart, August 9, 1919.

crease of production at home and increase of import from abroad is the only cure. There is food enough abroad if we can pay for it, but we have not the means. Foreigners will have nothing to do with German paper money, and we must pay either in gold or goods. Since the revolution the gold reserve of the national bank has fallen from 2,500,000,000 to 1,000,000,000 marks,¹ and the difference has been used to purchase foodstuffs. This high road to bankruptcy can not be followed for long; we must export goods, and to improve the conditions of life we must produce. If goods produced in Germany are too dear—and high wages and feeble effort may have this result—we are at once faced by foreign competition; no one will buy our goods; our conditions of living will be made worse; and any person who advises the workers otherwise is only fooling them. Socialization will not alter the state of affairs unless it affects the quantity and kind of goods produced. It will come, however, and whether sooner or later depends on a variety of circumstances, not the least of which will be the attitude of the Entente toward us. But socialization will do no good unless it brings with it a great increase in production of goods, and the mere raising of wages and salaries is purely illusory. Every increase of wages entails an equivalent rise in price; for wages plus the employer's profit determine the price of goods. At present, however, profits are not on the up grade. Hence the mere rise of wages has effects analogous to the injection of morphine.

The need of the hour is a fall in prices and a rise in production. The Government, by paying out 1,500,000,000 marks for foodstuffs, has undoubtedly taken a right step, but the results of this step will be jeopardized if it is followed by further demands for an increase in wages and if production is checked by constant strikes. The strike to-day is a two-edged weapon; the workers need not renounce it as a weapon, but it should only be used after full and serious consideration of the evil conditions under which we are living and in no case without the fullest regard for trade-union principles.

¹ Owing to the fluctuating value of the German mark conversions are not made. The par value of the mark is normally 23.8 cents.

MINIMUM WAGE.

American Minimum Wage Laws at Work.

AERICAN Minimum Wage Laws at Work is the title of an article by Dorothy W. Douglas of Seattle, Wash., appearing in the December, 1919, issue of the American Economic Review. The writer sketches briefly the historical development of legislation on this subject in Australia and Great Britain and, somewhat more fully, in the United States. Two general types of laws are represented by the acts of Massachusetts and Oregon, respectively, the former not being actually enforceable, while the latter, developing under circumstances somewhat different, provides penalties for non-compliance.

The conflict of interest between the success of the business and the welfare of the worker was formally recognized in some of the earlier laws, and is in evidence in the attitude and action of employer representatives on wage boards. Actual cost of living as shown by weekly budgets is not fully persuasive; "usually the wage finally agreed upon lags about a dollar behind the original budget," which is itself commonly too low.

There is also found to be a lack of flexibility in administration, especially in the face of such rapid industrial changes as have been experienced in the past two or three years. Another weakness is held to exist in the lack of centralized authority in the commissions, whose hands are tied too closely by the requirements of dependence on the action of advisory boards. These latter are likely to be partisan, and inclined to debate, while the employee representatives are probably neither able nor courageous enough to stand up against those of the employers.

Recommendations are made under three heads: First, the need for a real living standard; second, the need for a more flexible standard; third, the need for centralization of administrative responsibility. Under the first, the findings of such an agency as the United States Bureau of Labor Statistics would furnish a basis, while the same data would afford a standard for adjustments from time to time. To meet the ends of the third suggestion it is proposed that minimum wage laws be enforced by a bureau in the department of labor of the State, with a special deputy commissioner of labor at its head.

It is also strongly urged that there be a campaign to secure public interest and confidence in the work of the commissions and adequate appropriations to carry on their work.

COOPERATION.

Activities of British Cooperative Societies During 1917.¹

THE following particulars relating to industrial cooperative societies in the United Kingdom are based upon returns made direct to the Ministry of Labor, supplemented by information supplied by the Cooperative Union and the chief registrar of friendly societies.

At the end of 1917 there were in the United Kingdom 1,465 industrial cooperative societies, with an aggregate membership of 3,831,896; a total share, loan, and reserve capital of £81,770,273;² a total trade (distributive and productive) of £272,746,849;³ and a total profit—before deduction of interest on share capital—of £18,023,879.

Excepting for decreases in the number of societies—due mainly to amalgamation—and in the amount of profit, these figures show considerable growth as compared with 1916, there being an increase in membership of 268,127, or 7.5 per cent; in capital of £3,832,537, or 4.9 per cent; and in trade of £35,221,714, or 14.8 per cent. The profit, on the other hand, showed a decrease of £934,509, or 4.9 per cent. As regards the increase in trade, it should be remembered that the higher level of prices has had an important bearing on the increased value of sales.

The total number of persons directly employed by the societies was 156,945,³ and the total wages paid during the year amounted to £11,611,976,³ compared with 154,622 employees and £10,391,245 in wages in 1916.

Distribution.

At the end of 1917, 1,339 retail and two wholesale industrial societies were engaged in distribution. These societies had an aggregate membership of 3,790,448; a total share, loan, and reserve capital of £73,010,227; sales amounting to £216,951,643, and a profit on distribution—before deducting interest on share capital—of £17,114,849; while the total number of persons employed in distribution by the societies was 100,756, and the total wages paid £7,042,322.

Of the total profit of £17,114,849, a sum of £15,922,596 was made by the retail societies, and £1,192,253 by the two wholesale societies.

¹ Labour Gazette, London, November, 1919, pp. 465-467.

² The par value of the British pound sterling is \$4.8665, of the shilling 24.33 cents and of the penny 2.03 cents. Owing to the fluctuating exchange rate no attempt is made in this article to make conversions into United States money.

³ These figures are exclusive of the number and wages of persons employed in agriculture by industrial societies, and of the sales and transfers of agricultural produce by these societies.

In the case of the retail societies the greater part of the profit was distributed to the members as a dividend on purchases at an average rate of 1s. 8½d. in the pound sterling in England and Wales, 2s. 5½d. in Scotland, and 1s. 1d. in Ireland, the average for the United Kingdom being 1s. 9¾d. Compared with 1916, these rates of dividend showed a decrease of 5½d. in England and Wales, 4¾d. in Scotland, 2¼d. in Ireland, and 5¼d. for the United Kingdom. Nonmembers usually receive dividends at one-half these rates.

The English and Scottish wholesale societies paid to members a dividend on purchases of 3d. and 5½d. in the pound sterling, respectively. This was a decrease of 2d. in the case of the English Wholesale Society and of 2½d. in the case of the Scottish Wholesale Society.

Profit-sharing with employees.—Of the total 1,339 retail societies, 132, employing 15,255 persons and paying wages amounting to £1,096,565 in their distributive departments, allotted out of the profits a total of £43,425 to their employees as a bonus on wages, this being equal to 4 per cent.

Production.

In 1917, there were 1,108 industrial cooperative societies of various types engaged in production, consisting of 985 retail and 2 wholesale distributive societies having productive departments, and of 121 associations for production only: these consisting of 4 corn-milling societies, 39 breadmaking and other consumers' societies, and 78 associations of workers.

The following table shows by industry groups the number of persons employed, the amount of wages paid and the amount of sales, during 1917:

NUMBER OF PERSONS EMPLOYED, AMOUNT PAID IN WAGES, AMOUNT OF SALES DURING 1919 BY CONSUMERS' AND WORKERS' COOPERATIVE PRODUCTIVE SOCIETIES, BY INDUSTRY GROUP.

Industry group.	Consumers' societies.			Workers' societies.		
	Number of employees.	Amount paid in wages.	Amount of sales.	Number of employees.	Amount paid in wages.	Amount of sales.
		£	£		£	£

Profit-sharing with employees.—Of the 1,108 societies engaged in industrial production, 126, employing 10,432 persons in production, with wages amounting to £823,689, allotted a sum of £51,110 to these employees as a bonus on wages, this being equal to 6.2 per cent. Of the total amount £10,162 was allotted by 81 retail distributive societies, £7,533 by 3 consumers' productive societies, and £33,415 by 42 associations of workers.

Share of employees in management.—Sixty-nine of the 78 associations of workers for production, with sales amounting to £3,227,210, or 99.2 per cent of the total sales of the associations at work in 1917, made returns showing the extent to which their employees and others shared in the membership, capital, and management of the associations. The returns showed that the total membership of the 69 associations was 25,279, of whom 4,819, or 19.1 per cent, consisted of employees; 15,884, or 62.8 per cent, of other individuals; and 4,576, or 18.1 per cent, of other societies. Of the 7,254 persons employed by the associations, 4,819, or 66.4 per cent, were members of the associations employing them.

Of the £889,839 share and loan capital, £157,124, or 17.7 per cent, belonged to employees; £340,505, or 38.3 per cent, to other individual members; and £321,597, or 36.1 per cent, to other societies. The remaining £70,613, or 7.9 per cent, consisted of loans from nonmembers, including bank overdrafts.

The total number of directors or committeemen of the associations was 660, of whom 274, or 41.5 per cent, were employees of the associations; 255, or 38.6 per cent, were other individual members; and 131, or 19.9 per cent, were representatives of other (shareholding) societies.

VOCATIONAL EDUCATION.

Minnesota Plan for the Reeducation and Placement of Cripples.

By OSCAR M. SULLIVAN.¹

CORRECT systems and correct methods for the rehabilitation of cripples bid fair to be the subject of as much interchange and conflict of views in the years just ahead as has been the case for some time with similar topics in the field of workmen's compensation. It is the purpose of this article to call attention to the Minnesota plan for the reeducation and placement of cripples in the belief that it has many features which might well be considered by other States when casting around for standards for such legislation. In language the reeducation act is almost identical with the Massachusetts act, pioneer in the field. The chief essentials in which it differs are that authority is placed under the State board for vocational education instead of the industrial accident commission, and that the scope includes all cripples. For the phraseology, the combination of conciseness of expression with comprehensiveness, due acknowledgment is made of indebtedness to the Bay State framers of social legislation.

The Minnesota act has been in force since July 1, 1919; hence the interpretation that has been given it and the system that is being built around it are now fairly clear. In brief, it can be characterized as a phase of the State's activities in industrial education, administered by the case-work method, and recognizing fully the special relation to the State's other activities on behalf of labor. All these characteristics we believe are significant and mark what is destined to become a distinct type of rehabilitation work.

An Activity of the Department of Education.

To begin with, the assignment of the work to the department of education is not fortuitous or due to local reasons. In any State there are likely to be two other departments of government which could be given consideration as proper sponsors for it. They are

¹ Director of reeducation, Minnesota Department of Education.

the department of public welfare or charities and the industrial accident commission or labor department. To assign it to the former would mean that the State considered it as something undertaken out of sympathy in order to alleviate distress. The handicapped man would join the "three d's—dependents, defectives, and delinquents." To give it to the industrial agencies would not be objectionable, since it would be connecting it closely with the compensation system. It would, however, be illogical to divert to another branch of the government something which is predominantly a matter of education and vocational guidance. By placing the work with the department of education it is recognized as akin to the other educational activities of the State, an opportunity offered the individual because it is for the public good.

From the standpoint of administration it places the work in close touch with the other parts of the State's educational system and makes easy of reference the data which the State has in connection with industrial education. This perhaps would not make up for lack of correlation with the compensation system, if such were a necessary result. But it is not. The Minnesota act requires a plan of cooperation between the board for vocational education and the department of labor and industries, subject to the approval of the governor. The two departments have chosen to make the connection an organic one by giving the same person the direction of the compensation division and the division of reeducation. Correlation of work is, therefore, assured. This plan is, of course, not the only feasible one for securing effective cooperation. The essential thing is that the connection between the two activities should be genuine and continuous rather than formal and perfunctory.

The case-work method implies individual treatment for each case. The division is without funds or authority to start a central institution for the care and training of cripples and has not as yet found any need for such an institution. The policy of the division is to let a contract for instruction in each case with a suitable institution, teacher, or industrial establishment. This has been found perfectly feasible so far, and much more immediately practical than the organization of a new school. Should subsidized workshops for certain types, such as the blind, the paralytic, or the tubercular prove to be necessary, it is expected that these will be launched by private agencies and a subsidy covering the cost of the training given by the division for each new person trained. This would permit the workshop to be on a business basis, which is desirable, and still avoid the objection always advanced against the entrance by the State into the business field.

Two features in the qualification part of our law seem to us to have particular merit. One is that there is no poverty test. This is a corollary of the assignment of the division to the department of education. The training is given as a public duty, not as a charitable need. The other feature is that only bona fide residence in the State at the time the disability was incurred is required of the beneficiary. There is no one-year settlement harking back to the old poor laws. It is possible for the State, therefore, to undertake the reeducation of a man, for instance, who has just moved to the State intending to remain and who suffers an accident while engaged in one of the State's industries. The legal possibility squares with the moral obligation.

Public Relief not a Function Under the Law.

Perhaps the greatest difference of opinion in regard to the rehabilitation of cripples centers around the question whether certain things of a public-relief nature should be provided by the State. Included under this head would be occupational therapy and other special medical treatment, artificial limbs, and, greatest of them all, maintenance during training. Our act neither enjoins nor prohibits any of these. The question has been definitely faced by the State board for vocational education, however, and a rule adopted which holds none of them to be within the province of the division. We believe the decision is based upon sound public policy. In the compensation cases who form a large per cent of the disabled persons, all of the items above referred to are covered by the provisions of the law. They are cared for through a sound social insurance method, and could only be harmed by being offered public charity besides. Many of the railroad cases, another class, receive in damages under the liability acts greater amounts even than the workers under compensation, hence for these also a public relief scheme is inapplicable. For the other cases, the victims of private accidents and disease, the ideal method would be another resort to the social insurance idea, namely, to provide in a universal health-insurance act limited specific indemnities for such cases. Creation of a public relief fund now would only serve to put off the day when the question would be met properly, and prolong treatment by public charity of a problem that should be cured by social insurance. For the present many cases without means can be handled by securing temporary positions and giving them night-school training. Others can be cared for through existing public and private relief agencies. The Minnesota division has already entered into definite arrangements for co-operation in such cases with the central councils of social agencies in Minneapolis and St. Paul and the Social Service Club of Duluth.

The position taken by the board for vocational education does not mean that the division will not be of all the service possible in an advisory way as regards medical treatment, prosthesis, etc. Excellent results have already been secured in this line in the compensation cases and should eventually be secured in the others also. It is not the policy of the division to wait for an application, but on the first word of a serious accident, through the department of labor, the hospitals, the clipping service, or otherwise, steps are immediately taken to get in touch with the injured person and from that time on contact with the case is continuous.

The cases that have already come before the division present a wide variety. They include compensation accidents and railroad accidents, farm accidents, hunting accidents, street accidents, and impairments due to disease. It seems probable that the estimate made in 1918 by the governor's commission which studied the subject will be fully borne out. They reported that the probable number of cripples in Minnesota in any one year was between 900 and 1,000. This, of course, applies only to those seriously enough impaired to need rehabilitation.

The advisability of including all cripples under the law, not merely those which are the result of industrial accident, appears when the administrative problems of the work are disclosed. If the other cripples are not included in the provisions of the reeducation law some other agency, public or private, must take care of them. There will thus be a duplication of effort and a scattering of energies, when the situation calls for a most decided and effective concentration of energies. In addition, there is the fact that the social reasons for solving the problem in the one case are the same as in the other.

The Minnesota division has not inaugurated its work by launching a survey. The reasons for this are several. It was felt that the appropriation was so limited that it would be best to spend it all on direct work for cripples, especially as the general size of the field and the principles which should govern the work were known. In the second place, employers have been rather overworked with surveys of recent years, and it was felt best not to begin this new activity with something which might irritate them. Finally, it was felt that very satisfactory information could be gathered by the division as it handles each case, and that when this is supplemented by a gradual canvass made by the factory inspectors of the State department of labor as they make their regular inspections, it would give practically a complete survey without the expense and disadvantage of a formal undertaking of this character.

Placement of Cripples.

Another feature of the act which is important is that the placement is directly under the division of reeducation and not a cooperative activity of the State employment bureau. The division has its own placement officer, and in order to keep him in touch with the regular employment work it is arranged so that his headquarters are in the State headquarters of the free employment service. In this manner it is possible to give more specialized attention to the placement of handicapped persons than could be secured in any other way. Another consideration also makes this arrangement essential. One of the biggest tasks ahead of the division is to educate employers to give disabled persons a chance. The division can and will undertake this, while a regular employment service would probably be unwilling or unable to do so. Many employers still have an idea that insurance companies will raise their rates if they hire handicapped persons. Such an act was made illegal in Minnesota by the 1919 legislature, but it takes time for the information to spread. It is felt, however, that the bulk of the indisposition to hire impaired persons is due to an underestimate of their capacity. Only a prolonged and vigorous campaign of education will overcome this.

Text of the Reeducation Act.

Such, therefore, are the principles embodied in the Minnesota plan for reeducation and placement of cripples. Its enabling act is not so long as to frighten a body of legislators or to make them feel that they are plunging into a gigantic experiment involving unknown financial liabilities. Yet it makes a full grant of power and meets the situation in a manner to accomplish a large amount of good without preliminary delay. To those States which have been reluctant to take action because they feel that a new public institution or a new experiment in public relief was involved, the enabling act and the plan it stands for are offered for consideration. The text of the act, which was approved April 26, 1919, is as follows:¹

AN ACT Empowering the State board for vocational education to establish a division for the reeducation and placement of persons disabled in industry or otherwise, permitting cooperation with the Federal Government, and making an appropriation.

Be it enacted by the Legislature of the State of Minnesota:

SECTION 1. There is hereby established, under the direction and control of the State board for vocational education, a division for the training and instruction of persons whose capacity to earn a living has in any way been destroyed or impaired through industrial accident or otherwise: *Provided*, That at the time when the accident or disability was incurred they were residents or citizens of the State of Minnesota. The said board shall in its

¹ Chapter 365, Laws 1919.

regular reports to the legislature describe in detail the work of the division and may from time to time issue bulletins containing information relative thereto.

SEC. 2. The employees of the said division shall be appointed and their salaries determined by the said board. The division shall be furnished with suitable quarters in the State capitol, and the board may expend for salaries and other necessary expenses of such division such amounts as shall be appropriated by the legislature.

SEC. 3. The State board for vocational education and the department of labor and industries or any agency which may succeed it in the administration or supervision of the workmen's compensation act, shall formulate a plan of cooperation with reference to the work of said division. Such plan shall be effective only when approved by the governor of the State.

SEC. 4. The said division shall aid persons who are incapacitated as described in section 1 in obtaining such education, training, and employment as will tend to restore their capacity to earn a livelihood. The division may cooperate with the United States Government, and as a part of such cooperation may extend the benefits of this act to any civil employee of the United States disabled while in the performance of his duty, without regard to the residence or citizenship of such employee, if in the judgment of the board the benefits offered by the Federal Government are sufficient to compensate for the cost. The division may of its own accord establish or maintain, or in cooperation with local boards of education assist in establishing or maintaining, such courses as it may deem expedient, and otherwise may act in such manner as it may deem necessary to accomplish the purposes of this act.

SEC. 5. This act shall take effect and be in force from and after its passage.

Agreement Providing Part-Time Instruction for Textile Workers.¹

WITH the rapid increase in the number of part-time trade-extension classes being organized, an instruction agreement between the employer, employee, and the public school becomes more and more desirable. At a recent conference in Sylacauga, Ala., of representatives of the State board for vocational education, employers in textile mills, and the Federal agent for industrial education for southern region, the following written agreement was entered into by a mill and State officials:

It is proposed to organize a scheme of textile manufacturing instruction under the following conditions:

(a) *Type of school.*—The type to be employed is the part-time trade extension, combined with an evening school. (This combination is explained below.)

(b) *Board of control.*—The school is under the direction and control of the Mignon board of education.

(c) *Length of term.*—Instruction is to be given for 48 weeks of 3 hours per week, aggregating 144 hours under the part-time system; and 48 weeks of one hour per week, aggregating 48 hours, under the evening system.

¹ From Vocational Summary, October, 1919, p. 109. Washington.

(d) *Plan of organization.*—The hour of part-time instruction is to be the closing hour of the working day on employer's time¹ classified as part-time instruction, followed immediately by one-half hour, in continuous session, for the first two meetings per week on employee's time, classified as evening instruction. Assuming two groups operating under the above plan, one group is to meet Monday, Wednesday, and Friday, known as group A, and the other group Tuesday, Thursday, and Saturday of each week, known as Group B.

(e) *Time of meeting.*—Group A is to meet Monday and Wednesday, from 5 to 6.30 p. m.; and Friday, 5 to 6 p. m. B is to meet Tuesday and Thursday, 5 to 6.30 p. m.; and Saturday, 7 to 8 a. m.²

(f) *Financial.*—Fixing \$1.50 per hour as the rate of compensation for teachers employed, local funds must provide 37½ cents per hour for one-fourth of the salaries of teachers; State funds 37½ cents per hour for one-fourth of the salaries of teachers; and Federal funds 75 cents per hour, or one-half of the salaries of teachers. All other expenditures are to be provided for by the local board.

(g) *Supervision.*—The State board for vocational education through its fund for teacher training and supervision is to provide adequate assistance to local teachers in organizing material for teaching purposes without cost to the local board.

(h) *Course of study.*—A general mill course in textile instruction is to be offered. The course is divided into three main groups under the respective headings of carding, weaving, and spinning. Group A recites as follows: Monday, carding; Wednesday, weaving; Friday, spinning. Group B—Tuesday, carding; Thursday, weaving; Saturday, spinning.

(i) *Students.*—Fifteen operatives regularly employed in the Sylacauga Mills who are 16 years of age or over are to be selected for each group. If the demand for the course exceeds 30, a waiting list is to be established and enrolled in the order of application and selection.

(j) *Teachers.*—Three teachers for each group, one for carding, one for weaving, and one for spinning, are to be provided. The teaching group is to be made up of second hands, overseers, or higher officials. Teachers are to be paid at the rate of \$1.50 per hour for the first year's work, \$1.75 for the second year, and \$2 for the third and succeeding years.

(k) *Plant and equipment.*—Plant, equipment, and supplies are to be furnished by the local board of education. Instruction will be given in the mill, community building, or school building. Well lighted, heated, and ventilated rooms, with adequate blackboard, seating, and writing facilities, with ready access to the entire mill equipment, is to be considered the minimum requirement.

¹ By continuing the class for one-half hour on employees' time it is thought that disinterested pupils will be eliminated from the class. This is the company's method of avoiding "deadheads" on company time.

² The change was made at the Saturday session on account of the plant being in operation only one-half day and to avoid the difficulties arising from pay day.

EMPLOYEES' REPRESENTATION.

Works Councils and Shop Committees in the United States.

A RECENT study on works councils in the United States,¹ by the National Industrial Conference Board, furnishing another evidence of the widespread interest in plans for representation of employees in industry, covers 176 companies or corporations having works councils in 225 different industrial plants, affecting approximately 500,000 workers. In addition to those plans created as a result of awards of the National War Labor Board, the Shipbuilding Labor Adjustment Board, and other Government agencies, there are 105 which were voluntarily put in operation by employers. The term "works council," which has not been generally adopted in this country, was determined upon, the report states, as being more definite and exact than that of "shop committee" which has been commonly used.

Owing to the comparatively brief experience of nearly all the existing committees, no recommendation as to the establishment of works councils is made in the report, which gives a brief account of their development from the comparatively recent date of 1904, when the first known example of a works committee was formed at the plant of the Nernst Lamp Co., in Pittsburgh. The report makes a distinction between the principle of collective dealing by employees of individual establishments with their employers and collective bargaining which involves recognition of labor unions as organizations, and states that the institution of works councils includes acceptance of the former principle only.

A tabulation of works councils by industries shows that 144 were found in the metal trades, while 81 were distributed over other industries, and that in the distribution by size of establishment the majority were found in plants having over 500 workers. Of particular interest was the distribution according to the extent of trade-unionism. There were 81 plants from which information was received on this subject, and but 2 of these were "closed nonunion shops" and one other nominally so. Out of about 60 firms reporting the

¹ National Industrial Conference Board. Works councils in the United States. Boston, October, 1919. 135 pp. Research report No. 21.

percentage of union labor in their employ only 8 had no union members, while the number of trade-unionists in the majority of the establishments ranged from 20 to 90 per cent of the force.

The details of organization, the scope of the plans, and the functions and activities of the works committees are dealt with in considerable detail, but it is in the chapter on "Experience with works councils" that the main interest lies, since heretofore, owing to their brief existence, there has been little information collected as to the results attained by the committees. There are various factors which affect the success of such attempts which must be taken into consideration, the report states, such as "the individual circumstances under which they were formed, differences in type of organization, the character of relations between employer and employees, the personality of the management, the type of employees, the size of establishment, and industrial conditions prevailing at the time of their introduction."

It is stated that only a small minority of the councils have been entirely given up or have failed to work satisfactorily, and in most of these cases the committees were established by governmental agencies to meet war emergencies. In general, it is said that the committees have had a beneficial effect on labor conditions, although in a few instances they seem to have aggravated labor troubles. They evidently have been of some effect in reducing labor turnover, but there seems to be only a small amount of evidence of an increase in productive efficiency through their influence or of reduction of tardiness or absenteeism. There was evidence in most cases reporting that a conservative type of employee had been elected to membership, although approval of the ones selected was by no means unanimous. In general it was found that the committees have been instrumental in improving the relations between management and employees, and 23 establishments reported that labor difficulties have decreased or been entirely eliminated through the agency of the committees.

Definite testimony of the effect of the councils on the spread of unionism was given in 13 cases, 7 of which reported an increase in union membership, while among the remainder it decreased. The report as a whole seems to show such a diversified experience that it is difficult to generalize as to the effect of the councils, although the conclusion was reached as a result of the investigation that they are "worthy of unprejudiced consideration on the part of American industry."

Shop Committees and Industrial Councils.¹

AN INVESTIGATION has recently been made under the direction of the New Jersey State Chamber of Commerce having for its purpose the consideration of the problem of labor adjustment, through the medium of shop committee systems, particularly as it might relate to the development of such plans in industrial plants in New Jersey.

Preceding this study a series of conferences were held in Newark by the chamber of commerce to which several large industrial establishments were invited to send both employer and employee representatives. At the second meeting a committee, with representatives of organized labor and of capital, employees and employers of plants having shop committees, and the public, was appointed to study the systems and make recommendations. This committee after a third conference recommended that a national conference should be called and also that the chamber of commerce should authorize a thorough investigation of the question.

With this as a background a special study was made of the systems in 13 establishments which were decided upon as embodying practically all the features to be found in any of the systems now in force.

In speaking of the various types of shop committee plans the writer of the report of the investigation says:

Whatever name or form a shop committee may assume, it may be, broadly speaking, described and distinguished by three features: It involves the election of delegates by the workers of the shop; the constitution of these delegates into one or several committees; the dealings between such committee or committees and the management either in a joint committee session or through individual delegates or delegations and interviews.

The writer does not cover any new ground in the discussion of the objects and functions of shop committees, the subjects mentioned as being within the province of shop committees being practically the same as those which have been advocated by the majority of writers on the subject. The analysis of the relation of shop committees to labor unions, however, is both comprehensive and illuminating. The discussion covers the possibility of substituting shop committees for unionism, the dangers to be found in a destructive rivalry, recognition of the unions, centralization of power in union organization, the shop committee as a means toward filling the breach within the

¹ New Jersey State Chamber of Commerce. Bureau of State Research. Shop committees and industrial councils. Pts. I and II. Prepared by Paul Studensky, supervisor of staff on industrial relations. Newark, July, 1919, 63 pp. "New Jersey," Consecutive No. 18.

union organization, and shop committees in union shops. The opinion is expressed that owing to the possibility of rapid organization of workers in individual establishments it is becoming increasingly difficult for employers to adopt a neutral attitude toward the labor unions, and that "only the development of an appreciation on the part of the employers of the need of labor organization and on the part of the latter of the value of shop committees can prevent an undesirable conflict." "Company unions," the writer believes, present little opportunity for the establishment of amicable relations, but this must be secured through recognition of the unions and participation by them in the development of shop committees, and through this utilization of the shop committee the evils connected with centralization of power in the hands of a few labor officials may be corrected. Without this he considers there is danger of a destructive rivalry between the two types of organization which will inevitably result in the destruction of one or the other of them.

The failure of the unions to keep the organization democratic enough to suit the rank and file of the workers may be remedied, in the writer's opinion, by utilizing the workshop committees to give a larger amount of authority to the average member while thus leaving the leaders opportunity to devote their attention to the broader problems of the labor movement.

Industrial councils are advocated as a means of stabilizing conditions throughout whole industries or over all the industries of certain areas—local, State, national, and international. Councils have now been agreed upon by representatives of employers and employed in six industries: Clothing, electrical, harbor marine, long-shore, ocean marine, and printing, while plans for councils covering a certain area include the International Labor Conference, National (United States) Industrial Conference, Canadian National Industrial Conference, New Jersey Industrial Council, New York State Labor Board, and industrial community councils. The question has been raised as to whether industrial councils combined with shop committee systems will supersede labor unions. To the writer this does not seem probable, since in a measure there will always be a conflict of interests.

The 13 shop committee systems considered in the report are divided into 5 groups representing the following types: The War Labor Board plan; the combination of a shop committee system with unionism; the Rockefeller plan; the Federal plan, and the cooperative plan with representation on the board of directors.

Application of Industrial Council Plan to British Civil Service.

THE subcommittee of the Interdepartmental Committee of the British Government, appointed to draw up a plan by which the Whitley industrial council scheme might be applied to the administrative branches of the civil service, submitted its report in March, 1919, which was approved by the War Cabinet and was considered on April 8 at a conference of representatives of associations covering practically the whole of the administrative, clerical, manipulative, and manual civil services and officials of the Government departments concerned. This report was noted somewhat at length in the MONTHLY LABOR REVIEW for July, 1919 (pp. 123-126). The matter was subsequently referred to a committee of 30 representing, in equal numbers, the Government departments and the civil-service associations, and its report was on July 3 submitted to a joint conference of official representatives and representatives of the staff associations presided over by the Chancellor of the Exchequer, and was adopted with certain modifications. This report of the national provisional joint committee was noted in the MONTHLY LABOR REVIEW for August (p. 132).

Following the adoption of this latter report a national council for the administrative and the legal departments of the Government was established, and on July 23 a committee of five official representatives and five staff representatives was appointed to draw up a model constitution.¹ This has been done and has been circulated by the Treasury, together with a letter recommending that steps be taken to form departmental councils on the lines indicated. The model constitution consists of 26 paragraphs dealing with membership, officers, objects and functions, committees, etc. Paragraphs 13 to 16, covering objects and functions, are as follows:

13. *General objects.*—The general objects of the council shall be to secure the greatest measure of cooperation between the administration, in its capacity as employer, and the general body of the staff, in matters affecting the department, with a view to increased efficiency in the department combined with the well-being of those employed; to provide machinery for dealing with grievances; and generally to bring together the experience and different points of view respecting conditions of service within the department.

14. *Functions.*—The scope of the council shall comprise all matters which affect the conditions of service of the staff in the department, and its functions shall include the following:

(I) Provision of the best means for utilizing the ideas and experience of the staff.

¹ Data taken from the Labour Gazette, London, September, 1919 (p. 371).

(II) Means for securing to the staff a greater share in and responsibility for the determination and observance of the conditions under which their duties are carried out.

(III) Determination of the general principles governing conditions of service, e. g., recruitment, hours, tenure, and remuneration, in so far as these matters are peculiar to members of the staff of the department.

(IV) The encouragement of the further education of the staff, and their training in higher administration and organization.

(V) Improvement of office machinery and organization, and the provision of opportunities for the full consideration of suggestions by the staff on this subject.

(VI) The consideration of proposed legislation so far as it has a bearing upon the position of members of the staff in relation to their employment in the department.

(VII) The discussion of the general principles governing superannuation and their application to the members of the staff in the department.

15. *Promotion and discipline.*—Without prejudice to the responsibility of the head of the department for making promotions and maintaining discipline, it shall be within the competence of the council (1) to discuss any promotion in regard to which it is represented by the staff side that the principles of promotion accepted by or with the sanction of the national council have been violated; and (2) to discuss any case in which disciplinary action has been taken if it is represented by the staff side that such a course is desirable.

16. Questions common to two or more departments (including the * * * department), not being general questions, shall be reported to the national council. The council may request the national council to appoint a chairman for interdepartmental meetings for the consideration of such questions.

EMPLOYMENT AND UNEMPLOYMENT.

Employment in Selected Industries in November, 1919.

THE Bureau of Labor Statistics received and tabulated reports concerning the volume of employment in November, 1919, from representative establishments in 13 manufacturing industries. Comparing the figures of November, 1919, with those of identical establishments for November, 1918, it appears that in 10 industries there was an increase in the number of persons employed, while in 3 there was a decrease. The largest increase, 29.8 per cent, is shown in automobile manufacturing, and the greatest decreases—33.7 and 26.9 per cent—appear in iron and steel and in car building and repairing, respectively.

Eleven of the 13 industries show an increase in the total amount of the pay roll for November, 1919, as compared with November, 1918, and two show a decrease. The most important percentage increases—68.4, 67.4, 59.5, and 52.1—appear in men's ready-made clothing, silk, automobile manufacturing, and boots and shoes, respectively. Decreases of 33.5 and 25.3 per cent are found in iron and steel and car building and repairing. The large increases over last year are due to the fact that the figures for last year were affected by the signing of the armistice and the epidemic of influenza.

Comparative data for November, 1919, and October, 1919, appear in the following table. The figures show that in 12 industries there was an increase in the number of persons on the pay roll in November as compared with October and in one a decrease.

The largest increases in the number of people employed appear in iron and steel, 17.3 per cent; cigar manufacturing, 12.6 per cent; men's ready-made clothing, 5.6 per cent; and silk, 5.1 per cent. A decrease of 1.5 per cent is shown in cotton manufacturing.

In comparing November, 1919, with October of this year, eight industries show an increase in the amount of money paid to employees and five a decrease. The most important increase is one of 20.9 per cent in cigar manufacturing, while iron and steel, men's ready-made clothing, and silk show percentage increases of 17.4, 11.9, and 11.2, respectively. The most important decreases are 4.2 per cent in cotton manufacturing and 2 per cent in automobile manufacturing.

Changes in Wage Rates.

During the period October 15 to November 15, 1919, there were increases in all of the 13 industries. Of the establishments report-

ing, many did not answer the inquiry relative to this item, but in such cases it is not likely that changes were made.

Automobile manufacturing: One plant reported an increase of approximately 10 per cent, but made no other statement. In one firm 1.8 per cent of the people received 8.3 per cent increase in wages. Five per cent of the men in one establishment received an increase of 6 per cent. One concern granted a 4 per cent increase to 9 per cent of the employees, and another shop gave an increase of 1.89 per cent to 43.3 per cent of the force. All of the men in one plant received an increase of 1 per cent. Two concerns reported a few individual increases.

Boots and shoes: One concern gave an increase of 29 per cent to 5 per cent of the pieceworkers and 12 per cent to 14 per cent of day help. About 25 per cent of the employees in one plant received a 25 per cent of the pieceworkers and 12 per cent to 14 per cent of day affecting 15 per cent of the men in one, and 10 per cent in the other. An increase of 23 per cent to $8\frac{1}{2}$ per cent of the force was granted by one firm. Twelve per cent of the employees in one concern received an increase of 18 per cent, while one establishment gave an increase of $12\frac{1}{2}$ per cent to 20 per cent of the force. Two plants reported a 2 per cent increase affecting 3 per cent of the men in each. One firm reported an increase but gave no further data.

Car building and repairing: One car building shop granted a $12\frac{1}{2}$ per cent increase to $16\frac{2}{3}$ per cent of its employees. Several increases were reported by the railroads in accordance with the national agreement made valid by the Director General of Railroads.

Cigar manufacturing: One establishment reported a 33 per cent increase to 90 per cent of the force. Increases ranging from $4\frac{1}{2}$ to $27\frac{1}{4}$ per cent affecting 70 per cent of the employees were given by one firm. All of the men in one concern received an increase of 25 per cent. Two factories reported a 20 per cent increase, affecting all of the employees in one firm and 90 per cent of the men in the other; this second firm also gave an increase of 10 per cent to 10 per cent of its employees. Four concerns gave an increase of 10 per cent, affecting all of the force in two plants, 95 per cent of the men in the third, and 40 per cent of the employees in the fourth. Sixty per cent of the help in one factory received a 5 per cent increase. One concern reported an increase to all of its men but made no statement concerning the percentage of the increase.

Men's ready-made clothing: One establishment reported increases ranging from 10 to 25 per cent affecting 75 per cent of the force. All of the employees in one concern received an increase of about 15 per cent. One plant granted a \$6 per week increase to all of the force. One establishment that reported an average increase of \$5 per week

gave no further data, and four other concerns granted an increase of \$5 per week, affecting all of the men in two establishments, 90 per cent of the employees in the third establishment, while the fourth failed to mention the proportion of the force affected.

Cotton finishing: One concern reported an increase of 10 per cent affecting 5 per cent of the employees.

Cotton manufacturing: All of the men in one establishment received an increase of $12\frac{1}{2}$ per cent and all of the force in another plant were increased about 10 per cent.

Hosiery and underwear: One mill gave a 75 per cent increase to 15 per cent of the force, while another concern granted an increase of 5 per cent, but failed to state the number affected. One plant reported an increase but made no other statement.

Iron and steel: One plant granted a 10 per cent increase to 40 per cent of the force, while another concern gave increases ranging from 5 to 10 per cent which affected 5 per cent of the employees. One mill increased the 40 per cent bonus to 55 per cent, affecting all employees except bar mill rollers, heaters, and brick masons, and also gave a 9 per cent increase to 98.1 per cent of the force. Twenty per cent of the men in one plant received an increase of 6 per cent.

Leather manufacturing: An increase of 10 per cent affecting $1\frac{1}{2}$ per cent of the men was reported by one establishment and another firm gave a 7 per cent increase to 80 per cent of all female employees.

Paper making: One establishment granted an 8 per cent increase to 97 per cent of the force. One firm reported increases of 10 to 25 cents per day affecting 10 per cent of the force. One concern gave several individual increases.

Silk: An increase of 20 per cent to $66\frac{2}{3}$ per cent of the employees was reported by one firm. Three concerns gave 10 per cent increases affecting all of the men in one, 10 per cent of the force in the second, but the third failed to state the per cent of the employees affected. All of the men in one establishment received an increase of about 10 per cent. Eighty-two per cent of the force in one firm received a 9 per cent increase and about 18 per cent of the men in another mill received an increase of approximately 9 per cent. Two factories granted an increase of 7 per cent to 30 per cent of their force. One concern gave 90 per cent of the force a 5 per cent increase, and in another mill all hands were increased \$1 per week.

Woolen: One firm reported a 10 per cent increase to 10 per cent of the employees.

Report of Employment Exchanges in the United Kingdom.

AS REPORTED by the British Labor Gazette for November, 1919, the operations of the employment exchanges for the five weeks ending October 10, 1919, are summarized as follows:

The average daily number of registrations, of vacancies notified, and of vacancies filled during the five weeks was 15,781, 5,376, and 3,628, respectively.

Compared with the previous month, the daily average of registrations showed an increase of 11 per cent, while the daily average of vacancies notified and vacancies filled showed decreases of 13.6 per cent and 14.3 per cent, respectively. The marked increase in the number of registrations was due to the unemployment caused by the railway strike and the molders' dispute. Concurrently with an increase in applications for work there were decreases in the daily average number of vacancies notified and vacancies filled.

In the principal occupational groups the daily average number of applications from adults was 13,867—10,298 men and 3,569 women. There were 4,396 vacancies reported—2,340 men and 2,056 women. The average daily number of positions filled was 3,628. When compared with the previous month there was a decline of 16 per cent among men and 5 per cent among women.

The occupational groups in which there were the largest number of positions filled by men were: Engineering, shipbuilding, and construction of vehicles, 21 per cent; building, 20 per cent; and transport, 10 per cent. Sixteen per cent were general laborers. Over 50 per cent of the women were placed in domestic service, 9 per cent in agriculture, and 6 per cent in textiles.

As regards juveniles, the daily average of registrations was 1,914, while that of vacancies notified was 980. The daily average number of vacancies filled during the month as compared with the previous month showed a decrease of 24 per cent.

Volume of Employment in the United Kingdom in October, 1919.

THE following figures as to the condition of employment in Great Britain and Ireland in October, 1919, as compared with September, 1919, and October, 1918, have been compiled from figures appearing in the British Labor Gazette for November, 1919. Similar information for July was published in the October LABOR REVIEW.

In comparing October, 1919, with September, 1919, relative to the number of employees, respective increases of 4, 3.2, 3.1, and 3 per cent are shown in glass, cement, corset, and lace trades. The largest decreases—5.7 and 4.8 per cent—appear in iron and steel and seamen.

The aggregate earnings of employees in October, 1919, as compared with September, 1919, show increases in every industry. The worsted, glass, pottery, and woolen trades show respective percentage increases of 8.2, 7.9, 6.7 and 6.6.

In October, 1919, as compared with October, 1918, as to the number of persons employed, dock and riverside labor shows an increase of 72.4 per cent; the cement trade, an increase of 69.7 per cent; the food preparation trades, an increase of 40.1 per cent; quarrying, an increase of 38.6 per cent; and the printing trade, an increase of 38.4 per cent. The largest decrease—5.6 per cent—appears in iron and steel.

Comparing October, 1919, with October, 1918, on the question of earnings of employees, increases of 71.6, 71.2, 68.2, 65.6, and 63.5 per cent are shown in cement, cotton, food preparation, printing, and brick trades, respectively. Fourteen trades show increases ranging from 26.6 to 60.6 per cent, while linen shows an increase of 6.8 per cent, and the tailoring trade, an increase of 1 per cent. There were no decreases during the period mentioned.

Employment of Disabled ex-Service Men in Great Britain.

THROUGH a royal proclamation the British Government recently launched a new scheme for the employment of disabled ex-service men having for its primary object a more rapid absorption into industry of men disabled in the war by means of a closer cooperation of employers. Any employer who engages to adopt this plan will have his name enrolled upon a national list called the "King's National Roll" and is entitled to use upon his correspondence an official device "indicating that he recognizes the national obligation to the disabled and that his share therein is gladly undertaken." The scheme, which is reminiscent of the citation awarded by the United States War and Navy Departments to employers guaranteeing to reemploy 100 per cent of their former employees who had entered the service, is said to be an application of the "Rothband scheme" and "Rotherham scheme," from the former of which it derives the "National Roll" and the royal appeal; from the latter the 5 per cent limit and the correspondence device.

Briefly summarized the scheme as adopted is as follows:

Every employer in the United Kingdom who employs 10 or more workers is asked to undertake to employ as many disabled ex-service men as possible, with a minimum of 5 per cent of his total establishment. Those employers who can absorb more than 5 per cent are strongly urged to do so. Employers may count toward their percentage any disabled men already in their employ or in training in their premises, and also any vacancies they have guaranteed to the Ministry of Labor to leave open for disabled men in training elsewhere. The special percentages to be adopted for particular trades have been indicated by the advisory central bodies, but where such action has not yet been taken, or where the recommendation issued does not fit local circumstances, local technical advisory committees will prescribe the percentage.¹

As indicated in the summarization of the scheme, the plan has been discussed with a majority of the staple trades in Great Britain. By some it has been adopted as it stands, while others have accepted it with modifications.

No dilution of skilled labor is contemplated by the adoption of this scheme, nor does it vitiate any arrangements regarding training already existing between the Ministry of Labor and the trade advisory committees. It is suggested that the eligibility of disabled men for training be decided upon through agreements between employers and trade-unions. In case the training given in institutions for this purpose is insufficient to meet the requirements of any trade the Min-

¹ The Labour Gazette, London, September, 1919, p. 371.

ister of Labor may require the employer to furnish training in his own establishment for the positions guaranteed by him.

In order that there shall be no detrimental effect upon existing rates of wages "the wages of trained disabled men will," according to the royal proclamation, "be fixed according to agreements made on their behalf with the trade advisory committee. With regard to untrained disabled men on work not normally performed by skilled men, wages will be fixed by the special arrangements in operation for the settling of wages questions in trades where such arrangements exist, and in other trades disabled men should, generally speaking, receive the district rate of wages. Exceptional cases in which the earning capacity of the disabled man is abnormally reduced may, in the last resort, be referred to the local technical advisory committee, the local employment committee, or the appropriate trade body. In no case must the possession of a disability pension be taken into account in computing the rate of wages."¹

The proclamation further points out that "a 'disabled man' is, technically speaking, (a) any man in possession of a disablement pension, (b) any man who has received from the Ministry of Pensions a gratuity for a minor disablement or aggravation of a complaint, and who is adjudged by the local employment committee to be incapacitated, either wholly or in part, from following his normal occupation."²

Since the publication of the royal proclamation the scheme has been extended to undertakings in which fewer than 10 workers are employed, thus reaching every employer of labor in the United Kingdom. From the last report—November 4, 1919—5,088³ firms have adopted the scheme, interest in which is rapidly increasing. These firms employ 725,000 workers and have agreed to give positions to 46,000 disabled men.

Among the important branches of industry in which this method of placing disabled soldiers is being tried out are: 24 municipalities; 6 electrical works; 5 tramways; 12 gas companies; 4 newspapers; 6 shipping companies; 7 engineering firms; 6 provision firms; 5 clothing and boot manufacturers; and 4 printing establishments. Some of the firms are now establishing training centers for the men they wish to employ.

In the civil service, apart from the industrial departments, the number of disabled men employed on October 27, 1919, had passed the established 5 per cent, and Sir Robert Horne, the minister of

¹ Manchester (England) Guardian, Sept. 15, 1919, p. 7.

² Idem.

³ Great Britain. Ministry of Labor. Month's Work, November, 1919, p. 83.

labor, estimated that by December 1 it would be at least 8 per cent of the total number employed. In the industrial departments of the Government the number of disabled men employed is not definitely known, but available information indicates that it is over 5 per cent. The railways have not been able to guarantee employing a definite percentage of disabled men, but they have taken on from 3 to 4 per cent of them in addition to the number of their own men who are being reabsorbed into the service.

WOMEN IN INDUSTRY.

Women in the Government Service.¹

FOR many years people interested in securing equality of opportunity for woman workers have felt that this equality did not exist in the Government service, the place above all others where every citizen of the country should be assured of equal opportunity. Because of the tremendous influx of women into new occupations during the war, and the consequent general recognition of their abilities along many different lines, it was felt that the time was ripe for discovering to what extent the new attitude toward woman workers had penetrated the various branches of the Government service. With this object in view the Women's Bureau of the United States Department of Labor arranged to make a study of positions in the Government service open by examination to women as compared with those closed to women. The study was begun in September, 1919. Part I, which emphasizes the fact that women were excluded from 60 per cent of the examinations held from January 1, 1919, to June 30, 1919, was completed on October 16, and submitted to the Civil Service Commission on October 27.

On November 5, 10 days after receiving the report, the Civil Service Commission passed a ruling opening all examinations to both women and men, leaving it to the discretion of the appointing officers to specify the sex desired when requesting certification of eligibles.

On November 19, a bill was introduced in the Senate by Senator McLean, of Connecticut, amending the statute now in force which dates back to 1870 and provides that at the discretion of the head of any department women may be appointed to any clerkship in the Government service. The amendment provides that in requesting a register of eligibles for appointment the nominating and appointing officials shall not specify sex unless sex is a physical barrier to the proper performance of the duties to be fulfilled.

Thus one of the ends desired has already been almost completely accomplished. Once the facts were assembled the rapidity with

¹ This summary of the report on women in the Government service by the Women's Bureau of the United States Department of Labor was prepared by that bureau.

which the remedy was supplied gives rise to a hope that Part II of the report, showing an equally serious discrimination in the matter of appointments and entrance salaries, may have as satisfactory a result.

The entire report was submitted both to the Civil Service Commission and to the Joint Commission on Reclassification of Salaries. A subcommittee of the latter on the employment conditions of women in the civil service has incorporated the material in its report to the committee on employment policies which has been adopted and passed on to the commission.¹

Exclusion of Women from Examinations.

The largest employer of labor in the country and the employer of the greatest variety of labor, the United States Government, has as its employment agent the Civil Service Commission. This commission is responsible for securing the proper person for almost every position in the Government service except those of unskilled labor, in some States, and those filled by presidential appointment. The appointment of women to any Government position is still regulated by a statute written in 1870 which declared that women may in the discretion of the head of any department be appointed to any of the clerkships therein authorized by law. From this statute has sprung the custom of opening examinations to both sexes or closing them to either sex at the discretion of the head of any department, regardless of the fact that neither rule nor law covers the examination itself. When a vacancy occurs for which the Civil Service Commission has no register of eligible persons, the head of the bureau in which the vacancy occurs informs the Civil Service Commission of its needs, indicating whether a man or a woman is desired for the position or whether no discrimination will be made. The decision in this matter is based upon the needs of the particular bureau. Barring women or men from any examination, however, bars them not only from the special occupation for which the examination is given but from all kindred occupations. All other bureaus which may require services of the same or like quality as those specified in the examination are confined to a register made up exclusively of one sex when the opposite sex might be as acceptable or preferable; or they must ask for a special examination in which no sex line is drawn; or they must seek the woman or man desired among those already in the Government service. The bureau asking for the examination in the first instance may, without question, require the services of men only or

¹ This article summarizes the report of conditions as found during the period covered and, of course, takes no account of the recent ruling of the Civil Service Commission.

women only, but by closing the examination to either sex, all other bureaus are restricted in the choice of service or forced to call for special examinations entailing an additional expenditure of time and money.

From January 1, 1919, to June 30, 1919, the Civil Service Commission held examinations to obtain eligible people for vacancies in 260 different types of positions, exclusive of manufacturing and mechanical positions in the ordnance factories, quartermaster depots, and navy yards, and exclusive of unskilled labor positions.¹ Women were excluded from examinations for 59.6 per cent of these occupations, tests for 155 of the occupations being open to men only. In the scientific and professional positions women were excluded from examination for over 64 per cent of the positions. In the mechanical and manufacturing services 87 per cent of the occupations were closed to women. Tests for clerical services of all kinds, however, except seven (15.9 per cent) were open to women. Of the 260 occupational examinations, the per cent closed to women, distributed according to service for which examinations were held, was found to be as follows: Biological science, 61.5; physical science, 64.5; medical science, 75; engineering, 67.5; economic and sociological, 100; miscellaneous professional (editorial work, teaching, and nursing), 30; managerial and other expert office service, 25; clerical, 15.9; mechanical and manufacturing, 87; domestic, reformatory, and rural, 83.3. Nearly 38 per cent of the examinations were open to men and women; 2.7 per cent to women only; and 59.6 per cent to men only.

Character of Examinations Closed to Women.

With more than 800,000 women in scientific or professional pursuits outside the Government service, with more than 2,000,000 women working in private manufacturing and mechanical establishments, with over 600,000 in clerical occupations in private employ, the question naturally arises as to what is the character of the Government work in which women are not allowed to participate.

During the first six months of 1919, examinations were held for 33 occupations involving field and laboratory experimentation. Women were permitted to take examination to conduct or assist in the conduct of experiments in food preparation in materials requisite to the home, in fertilizers and soils, in horticulture, plant diseases, cereal diseases, injurious and beneficial plant worms, fiber production, paper fibers, and for the conduct of experiments on materials

¹ The number of examinations held always outnumbers the different kinds of positions for which examinations are given, because it is often necessary to repeat tests at intervals in order to secure the necessary number of qualified people.

and devices suitable for naval uses. But they were not permitted to take tests for the conduct of investigations relating to animal parasites, to the mechanical properties of wood, to drug and oil plant cultivating, to tobacco breeding, to the introduction of new plants, to the relation of climates to agriculture, to aeronautics, to oil and gas field conditions, to colors and dyes, or to study the physiology of gas poisoning.

Women are permitted to study human diseases and plant diseases, but the Bureau of Animal Industry excludes them from its 1919 examinations for investigating animal parasites and performing administrative work in that connection.

The Navy Department was willing to use either men's or women's knowledge to secure materials and devices most suitable for naval uses, but the Forest Service wanted only men to determine the physical and mechanical properties of wood, and women were therefore excluded from the examination.

Women are acting as assistant weather observers for the Weather Bureau, and assistant horticulturists for the Department of Agriculture, but they are not permitted to take tests in climatology in its relation to agriculture. They are testing foods and drugs to determine their nutritive and medical quantities, but they are barred from examination in the testing of dyes.

The Harvard Medical School has recognized the value of one woman doctor's studies in industrial poisoning by appointing her assistant professor of industrial medicine. But our Government delegates to men only the study of the effects of gas poisoning.

As to the work of collecting information from original sources, out of examinations in the first half of 1919 for 16 different kinds of positions, 4 were open to women. If qualified, a woman may collect and compile information concerning shipments, receipts, and prices of food products in producing centers and large markets or may investigate methods and costs of marketing food products; she may collect or aid in collecting statistics on the production, consumption, and movement of mineral commodities in world trade; or she may assist in making surveys to determine the prevalence, causation, and prevention of human diseases. But the examinations bar her from securing the latter information if the position calls for a graduate of a medical college and carries with it the responsibility of recommending preventive and controlling measures. By the same policy she is kept from collecting information on the acreage conditions and yields of the various crops, or data regarding farm animals, nor may she investigate the volume and movement, the marketing and distribution, the supply and consumptive demand of foreign trade in farm

and nonmanufactured food products as long as the 1919 register of eligible men is still good. Investigating matters relating to the organization and operating of cooperative food producers' associations is also a closed field for women's service. The Bureau of Efficiency, by calling for men only in its 1919 examination, excludes women from conducting any of its investigation into the organization and procedure of Government departments. Less unusual is the Bureau of Mines' exclusion of women from investigating causes of accidents.

Women have acted and are acting as aids in restoring our handicapped and disabled sailors and soldiers to a normal frame of mind; they have taught and are teaching boys how to do mechanical tasks with their dismembered hands and arms; they are being employed as well as men for private and public employment offices. The Federal Board for Vocational Education, however, has believed that men are best able to learn of the desires and latent capabilities of our boys; that men only can advise and assist them in securing suitable training and employment; that men only have a knowledge of trades and systems of vocational education. All the examinations for such important service, are, therefore, open only to men.

All but two of the examinations given in the first six months of 1919 for inspection and law enforcement positions were closed to women. The food and drug inspection station at San Francisco permitted women to take the test for examining official samples of food and drugs, but in 1919 the Bureau of Chemistry at Washington excluded women from the tests for inspecting proprietary medicines or foods and drugs in general. Meat and live-stock inspection, disinfection of foreign seeds and plants, inspection of wood warehouses, and enforcement of our horticultural and game laws can only be done by men while the present register of eligibles holds good. Women may, if qualified, examine requests for patents in our Patent Office along with men, but they may not search or examine patents for the Purchase, Storage, and Traffic Division of the War Department if they must take an entrance examination for the position.

The Navy Department has recognized the value of women as draftsmen, since all its examinations, whether for general engineering work or for specific lines of aeronautical, ordnance, ship, electrical, radio, or buildings drafting, may be taken by either men or women. Other divisions, as the Engineers' Department and Patent Section of the War Department, the National Advisory Committee for Aeronautics, and the Bureau of Public Roads, did not admit women to draftsman examinations.

Some of the positions listed above from which women were excluded in the examinations given in the first six months of this year are undoubtedly such that their duties can be performed more satisfactorily by men than by women; for other positions there may be no women with sufficient experience to qualify. But a careful study of the exclusions indicates very clearly that the majority of scientific and professional positions which women were not permitted to enter in some departments are very similar in character to work women are doing and have done in other Government departments or in private establishments.

As long as it remains customary to permit any examination to be closed to one or the other sex because of the needs of one bureau the Civil Service Commission will not be able to marshal all available ability before the department appointment officials for choice.

With all examinations opened to persons of either sex, the country would know what storehouses of training and experience it had to draw from, the appointment officials would have a wider field from which to choose, and the women of the country would have their opportunities for service immeasurably increased.

Entrance Salaries of Women Compared With Those of Men.

The discriminating policy that prevailed in examinations up to November 5, resulting in barring women from a large proportion of the higher grades of service, is reflected naturally in the positions to which women are appointed and in the relative salary levels. One outcome of vital bearing is the overwhelming concentration, 91 per cent, of woman appointees in the clerical service. This massing in turn carries with it the depression of salaries toward the old-time woman's level, a figure traditionally below that which any number of men qualified to fill the positions will accept.

In order to get definite facts as to the entrance salaries of women compared with those of men, a study was made of the salaries paid to persons appointed to the Government service during the months of January and February, 1919. With the exception of persons working for nominal salaries or persons whose salary was paid in part only by the United States, and with the exception of manufacturing, mechanical, and unskilled laboring positions outside of Washington and similar positions in Washington to which no women were appointed, all appointments, whether for the departmental service in Washington, or for the field service, in the ten departments and under seven commissions were included in the study.

In the first two months of 1919, 7,959 appointments, exclusive of those specified above, were made to the Government service. Of

these 4,689 (58.9 per cent) were women and 3,270 (41.1 per cent) were men. The positions filled during this period ranged from charwoman to Federal Trade Commissioner. The salaries ranged accordingly from \$240 a year to \$19,000 a year; but the majority of appointees received neither one extreme nor the other. Over 86 per cent of all women were appointed at salaries ranging from \$900 to \$1,299 a year. Only 36 per cent of the men were appointed to positions at these salaries.¹

The following table shows the number and per cent of women and men entering the Government service during the first two months of 1919, classified according to entrance salaries and character of appointment:

NUMBER AND PER CENT OF WOMEN AND MEN RECEIVING APPOINTMENTS IN THE GOVERNMENT SERVICE AT EACH SPECIFIED ENTRANCE SALARY DURING JANUARY AND FEBRUARY, 1919, BY CHARACTER OF APPOINTMENT.

¹ Excepted appointments are those to positions which are excepted from examination by law or by executive order.

² Less than one-tenth of 1 per cent.

The table shows very clearly that as the salary advances the proportion of woman appointees receiving it decreases very rapidly. Only 4.7 per cent of the women as compared with 26.9 per cent of the men were engaged at rates ranging from \$1,300 to \$1,899. Posi-

¹ The proportion of men and women receiving the higher salaries is greater in positions which are excepted from civil-service examination and in temporary positions. Only 18.6 per cent of the woman appointees received excepted or temporary appointments, whereas 50.6 per cent of the men received these kinds of appointments.

tions carrying from \$1,900 to \$2,499 went to less than one-half of 1 per cent of the women, but to nearly 8 per cent of the men. Twenty-five hundred dollars but under \$3,600 a year was paid to less than one-third of 1 per cent of the women but to 8.5 per cent of the men; while \$3,600 a year and over was received by only two women, or less than one-tenth of 1 per cent of the woman appointees, whereas 100, or over 3 per cent of the men appointees, received over \$3,600 a year. As a whole, therefore, about 46 per cent of the men, as compared with slightly over 5 per cent of the women, received more than \$1,299 a year, in spite of the fact that the prevailing policy of appointing men as messengers resulted in twice as large a proportion of men as women being paid less than \$900 a year.

The concentration of women's appointments within the \$900 and under \$1,300 group corresponds closely with the concentration of their appointment within the clerical services, as stated in the opening paragraph of this section. Ninety-one per cent of the 4,689 women appointed in January and February of 1919 went into clerical occupations of one type or another. Forty-eight and one-half per cent of the men's appointments were made to these positions. Even within the clerical group concentration of the sexes occurs. Men predominate in the supervisory positions, in those requiring special training and experience, and, at the other end of the scale, as office messengers. Women predominate as stenographers, typists, and in index, filing, statistical, and other kinds of general office work.

The fact that influences other than the numbers of men and women available for the particular positions are at work in determining whether clerical work shall be done by a man or a woman is shown by an analysis of the number of people of each sex passing the examination, when compared with the proportion of positions filled by each sex.

In the first six months of 1919, 59 per cent of the persons passing the clerical tests were women, whereas 72 per cent of the appointments in the first two months of 1919 were women.

This discrepancy is largest among persons holding clerk positions, that is, persons who have passed the general clerk examination in spelling, arithmetic, penmanship, letter writing, and copying and correcting manuscript, and who are assigned to various office positions throughout the Government service. With a slightly larger number of men passing these examinations than women, 80 per cent of the positions were filled by women. For file and cataloguing clerk positions 74.5 per cent of the successful applicants were women although 84 per cent of the vacancies were filled by women. Eighty-six and one-half per cent of the positions in which various office appli-

ances are used were filled by women although they constituted but 81 per cent of those passing the examinations. Only in stenographic and typewriting positions do the percentage of appointments of woman eligibles fall within three points of each other. When special training is required the situation is reversed. Almost 30 per cent of the eligibles were women while only 15 per cent of the positions were filled by women. Approximately the same ratio between eligibles and appointments existed in the messenger service.

Another condition that appears to influence the proportion of men and women appointed to various positions is the weaker bargaining power of women. All applicants for probational positions state in their examination papers the minimum salary which they will accept. With the exception of messenger positions and card perforation machine operator positions the minimum salary advertised by the Civil Service Commission for clerical positions is \$900 a year. Among the applicants for probational clerical appointments in the months of January and February, 274 women as against 36 men agreed to accept the minimum offered or less; among the temporaries 131 women and 66 men agreed to accept \$900 or less; and as to the excepted positions at this salary or less 21 women and 1 man agreed to accept them. In other words, of the 529 applicants who expressed willingness to accept the advertised minimum or less, over 80 per cent were women.

A study of the relative salaries prevailing in this clerical group where the numbers emphasized are the largest, also bears witness to the weaker bargaining power of women. Although the salary received by the largest single group of people doing clerical work of a varied nature fell between \$1,100 and \$1,199 for both men and women, 36 per cent of the male appointees received more than this amount as against 16 per cent of the female appointees. The highest salary for a man in this group was \$2,400, for a woman \$1,800 a year. In the minor clerk positions, the largest single group of women received from \$1,000 to \$1,099 per year. A similar group of men got from \$1,200 to \$1,299 per year. The prevailing rate for woman typists was \$1,000 to \$1,099, for man typists between \$1,100 and \$1,199. Stenographers of both sexes received \$1,200 to a larger extent than any other salary. A slightly larger proportion of man than woman stenographers received over this amount.

Under clerical work requiring special training and experience and original thought are included law clerks, correspondence clerks, and clerks especially qualified to be intrusted with special kinds of office work. Although 14 women passed the law-clerk examination, none was appointed to this position during January and February of 1919.

They were appointed as correspondence clerks and special experts in the Bureau of War-Risk Insurance at salaries ranging from \$1,100 to \$2,000. Men taking the same positions received from \$1,200 to \$3,500.

As to the positions requiring education and experience, few women were appointed to managerial, supervisory, office organizing, or secretarial positions. Of the 15 women receiving such positions, only one earned an amount commensurate with the responsibility supposedly involved in these positions. The others received \$1,200, \$1,400, and \$1,600. Some men received the low rates that women did, but over half received \$2,000 and over.

As statisticians, work requiring college graduation and some practical experience, women accepted positions at \$1,200, \$1,800, and \$2,000. Men secured \$1,800, \$3,000, and \$4,000 jobs. Of the four women taking positions as verifiers of income and excess profit tax returns, two received \$1,400, one \$1,800, and one \$2,000. Nine men appointed to these positions received less than \$1,400, but 103 received over \$2,000.

A further study of the appointments of women as scientific investigators, collectors of statistical data, or in other positions requiring education and experience, shows the same condition. In the majority of the occupations to which women and men were appointed in any numbers, although men frequently received lower entrance salaries than women, the proportion of man appointees to the higher paid positions in each occupation was always in excess of the proportion of woman appointees to these positions.

Not until the entrance salaries to be paid in each occupation are fixed for probational, temporary, and excepted positions in accordance with the responsibilities and difficulties of the tasks to be undertaken, not until the classes of work within each occupation are so well determined and their salaries fixed so that the persons marking examination papers will be able to mark each applicant's class and salary status on the examination paper, will it be possible to eliminate the inequalities which have arisen through custom in the beginning salaries offered to women and men.

INDUSTRIAL ACCIDENTS.

New Basis for Measuring Accident Frequency and Severity Rates.

AT A meeting of the committee on statistics and compensation insurance cost of the International Association of Industrial Accident Boards and Commissions held at Harrisburg, Pa., December 3 to 5, 1919, the following resolution was adopted changing the unit for measuring both accident frequency and accident severity rates:

Resolved, That accident rates, both frequency rates and severity rates, be computed on the basis of 1,000 hours' exposure instead of 3,000 hours' exposure, as heretofore.

The unit of measure for both frequency and severity accident rates, which has come to be generally used, is the "300-day worker," sometimes called "full-time worker." This hypothetical worker is supposed to work 10 hours a day for 300 days in the year, or 3,000 hours per year.

The committee on statistics and compensation insurance cost at its first meeting considered very carefully the question of a proper unit for measuring accident rates and decided to adopt the only unit then in actual use, namely, the "300-day worker."

The "300-day worker" was chosen as the standard measure for accident rates because (1) it is absolutely necessary to have a common unit for measuring accidents in all occupations, all industries, all States, and all countries; (2) the "300-day worker" had been recommended as the standard unit for computing accident rates by the Permanent International Committee on Social Insurance and the International Institute of Statistics and was in use in Germany and Austria at the time the committee on statistics took up the matter of standardization of accident statistics; (3) it was alleged that most workers did work about 10 hours a day and about 300 days in the year. It was further argued that while the "300-day worker" did conform closely to the normal worker, still he was merely an abstraction, a unit of measure, and would measure exposure to accident just as accurately for an 8-hour day as a 10-hour day, for a 200-day

year as a 300-day year. The use of this unit, it was maintained, did not suggest a 10-hour day or a 300-day year as the ideal and proper working day and industrial year.

In fact both employers and employees do regard the "300-day worker" as suggesting what the ideal working day and working year should be. The secretary of the National Safety Council has pointed out that the 8-hour day is becoming the standard working day and suggested that the unit measure be made 2,400 hours per year instead of 3,000 hours, so as more nearly to reflect the yearly working time. A 2,000-hour year was also considered by the committee on statistics and compensation insurance cost, but it was recognized by all members of the committee that any standard unit of measure which suggested the length of time men do or should work is undesirable.

In view of the fact that the working time, both the hours per day and the days per year, varies widely from plant to plant, from industry to industry, from city to city, from country to country, and from year to year, it was thought best by the committee to cut loose entirely from a unit of measure that could be misunderstood as, in any way, implying what the proper working time should be. The adoption of 1,000 hours' exposure rids us forever of any such implication and gives a unit which is convenient in size and will remain unaffected by changes in the working day or variations in the working year. The 1,000-hour exposure is a stable, scientific, mathematical unit of measure, which is what is needed for the measurement of accident rates. It has the further advantage that accident rates measured by any other unit of exposure may be readily expressed in terms of the 1,000-hour unit and vice versa. For instance, all accident rates computed in units of the "300-day worker" may be converted into rates per 1,000 hours' exposure by dividing by 3. Frequency rates are to be expressed in rates per thousand thousand (1,000,000) hours' exposure of the working force, instead of per thousand "300-day workers." Severity rates are to be expressed as days lost per thousand hours' exposure of the working force, instead of days lost per "300-day worker." In both instances the new rates can be derived from the old rates by dividing by 3.

INDUSTRIAL HYGIENE AND MEDICINE.

A Standard Method of Sickness Reporting.

IN ORDER to promote the adoption of a standard method of sickness reporting by as many establishments and sick-benefit associations as possible, two plans for recording and reporting sickness among industrial employees and sick-benefit associations have been prepared by the Public Health Service. They were formulated by a special committee on industrial morbidity statistics, Vital Statistics Section of the American Public Health Association, in cooperation with the Public Health Service and with the advice and assistance of other Government bureaus.¹ Both plans are based on the same principles, but the first is considered preferable as offering possibilities for much greater detail in personnel records. In both it is considered essential that a diagnosis of each case of sickness causing disability be recorded.

Plan A.

According to plan A an individual personnel card is kept for every employee to be considered, whether the individual becomes sick or not. For this card the following form, 4 by 6 inches in size, is suggested:

MODEL FORM FOR PERSONNEL AND SICKNESS CARD—FACE.

1. Name of Employee.		2. Check No.	3. Date This Record Begins	4. Firm No.	5. Date Employment Ended.
6. Color and Sex.	7. Year of Birth.	8. Marital Condition.		9. Speaks English?	10.
11. Departments and Occupations in Plant.					
From—	To—	Months.	Department.	Occupation.	Possible Injurious Conditions.
.....					
12. Former Occupations Outside of Plant.					
From—	To—	Months.	Occupation.	Industry.	Possible Injurious Conditions.
.....					
13. Remarks:					

¹ Sickness records for industrial establishments. Public Health Reports, Nov. 14, 1919, pp. 2593-2604. United States Public Health Service, Washington.

MODEL FORM FOR PERSONNEL AND SICKNESS CARD—REVERSE SIDE.

[illegible]

From these personnel cards monthly tabular statements can be made showing the number of workers, the number of cases of sickness occurring among them, and the sickness rate per 1,000 persons, for any group of workers. "Tabs" or "signals" in certain divisions of the top of the card are suggested, to designate sex, color, and age group. Thus, a blue signal in the left third of the top of the card might indicate "white male, under 25 years," in the middle third, "25 to 44 years," and in the right third "45 years and over." A red signal might be used for white females, a yellow one for colored males, and a green one for colored females. At the end of the month the number of workers of each sex, color, and age group in any occupation, or department, or for the plant could be recorded quickly from these tabs. A distinct signal, for any illness, attached at the time to the card and removed at the end of the month, will facilitate the keeping of the sickness record.

Reports to the Public Health Service, to plant managers, or officials of sick-benefit associations should give the information provided for in the following model form:

among a group of persons is expressed in the form of a rate, there is afforded no basis for comparison with sickness among other groups of persons, nor can the increase or decrease of sickness among any group be measured."

Study of Influenza-Pneumonia Among Wage Earners.

SIGNIFICANT facts concerning the mortality from the influenza epidemic of 1918-19 are brought out by Lee K. Frankel and Louis I. Dublin¹ in a paper read before the vital statistics section of the American Public Health Association meeting at New Orleans. The data cover the period from October 1, 1918, to June 30, 1919, and are limited to the policyholders of the industrial department of the Metropolitan Life Insurance Co., which represent over 12,000,000 people, white and colored, male and female, of all ages except early infancy and extreme old age. The group is well distributed over the United States and Canada and the results are considered to be generally applicable to the working population of the United States.

Of 105,552 policy claims paid during the period under investigation, 70,729 deaths were due to influenza-pneumonia. Slightly more than three-fourths of these deaths occurred during the months of October, November, and December, 1918, 34,471 occurring in October alone. When related to the number of years of life exposed, these deaths indicate an annual rate of 774 per 100,000 during the nine-month period. As against these ratings for the epidemic period there was a rate of 152 per 100,000 during the 12 months ending September 30, 1918. The difference between 774 and 152 per 100,000, namely, 622, is regarded as an approximate measure of the effect of the epidemic.

The chief interest in the statistics centers around the incidence of deaths in relation to sex, color, and age. The respiratory diseases under normal conditions show a higher mortality among males than females. For example, in the seven years from 1911 to 1917, the mortality rates of males showed an excess of 18 per cent over females, among white people, and of 30 per cent among colored. During the period from October, 1918, to June, 1919, however, the rates for males and females respectively were 789 and 763 among whites, and 767 for both males and females among colored people. "There is, altogether, a suggestion that the excess mortality caused by the epidemic did not

¹ Influenza mortality among wage earners and their families. By Lee K. Frankel and Louis I. Dublin. Reprinted from American Journal of Public Health, Vol. IX, No. 10, October, 1919, pp. 731-742.

operate on the sexes as the normal mortality from influenza-pneumonia had in previous years."

Normally, the incidence of respiratory diseases is much higher among colored than among white persons, the period from 1911 to 1917 showing an excess of 72 per cent of colored over white males and 56 per cent of colored over white females thus affected. It was found that during the period of the epidemic the situation was reversed, the first three months showing a rate of 1,522 per 100,000 for colored males as against 1,844 per 100,000 for white males; and of 1,504 per 100,000 for colored females against 1,723 for white females.

While during normal times influenza-pneumonia affects primarily the first age period, from one to four years, and the period of late middle and old age, the statistics of the epidemic show the highest rate among whites to be the period from 25 to 34 years, which in normal times shows the minimal rate. The authors conclude that "we are concerned in this epidemic with a disease or group of diseases which behave very differently from the way in which the disease known by the same names affected the community in previous years."

Advantages of Industrial Clinics in General Hospitals.

IN A paper read before the National Safety Council, Cleveland, Ohio, in October and reprinted in *Modern Medicine*,¹ Dr. D. L. Edsall, of the Massachusetts General Hospital, explains the advantages offered by the industrial clinic when it is operated in connection with a general hospital. He states that it is hardly to be expected that each individual industrial establishment will have in its employ a group of leading men in all the various lines of clinical and scientific medicine, and that for this reason hospitals, particularly those connected with medical schools and with the staffs that the latter have, will always need to be centers for the study and treatment of difficult cases and for the investigation of problems, however far health establishments in industrial plants may progress. He is convinced that no other method than a special clinic goes so far to insure good service to the patients and no other method so stimulates and enlightens the interest of the hospital staff in general in this important health factor. Likewise, by no other means, he declares, is it possible to group the cases together in such manner that the results of study can be analyzed and made available, and in

¹ Industrial clinics in general hospitals, by D. L. Edsall, M. D. In *Modern Medicine*, November, 1919, pp. 575-577.

no other way does there occur such an accumulation and repetition of experience as to make evident and important problems that had been unrecognized or had seemed of little significance.

To be really useful and successful several things appear to be necessary. The clinic should be in charge of a physician whose greatest interest is in the work, and he should be on sufficient salary to enable him to spend most or all of his time at the work. This is necessary in order that he may properly develop his clinic and be free to make visits to factories in order to accumulate constantly increasing knowledge of industrial processes, and in order to determine day by day whether in doubtful cases seen in the clinic the work really explains a part or the whole of the effect upon health. Much of his time will be needed also in making studies in the clinic, in factories, and in the laboratory of the problems that are frequently suggested; and in this he will have many opportunities to keep occupied voluntary or paid assistants.

Another essential element in the clinic's success will be a trained social worker who is familiar with factory conditions and industrial processes as well as with general social conditions.

Dr. Edsall believes that the primary value of such a clinic has been the better care of the patients, and that equally obvious are the opportunities offered for furnishing new knowledge and thus improving conditions through carefully planned studies and through accumulations and analyses of records.

The largest possibilities of useful development, according to Dr. Edsall, lie in the research that can be carried out "if the clinic acts as a center for coordinating the problems that are unearthed in it with the health and technical departments of the industries, on the one hand, and on the other, the men and facilities that are found in medical schools and hospitals." He suggests that "there are among these two groups and their equipment the possibilities of attacking all sorts of problems and, not infrequently, of solving them. Research developments that will control or do away with hazards are, in the opinion of the writer, in the long run far more important than the diagnosis and treatment of a group of cases, important as the latter is."

Physiologic Needs of Woman Workers in Relation to Incomes.

COMMENTING on the results of investigations by Greenwood, Hodson, and Tebb dealing with the metabolism of female munition workers, which have recently been published by the British Food (War) Committee of the Royal Society,¹ the Journal of the American Medical Association² says:

¹ Greenwood, M., Hodson, C., and Tebb, A. E.: Report on the metabolism of female munition workers, Proc. Roy. Soc., section B, 91: 62 (Aug. 6), 1919.

² Journal of the American Medical Association, Nov. 15, 1919, p. 1533.

The war has for the first time made considerable demands on women to expend their energies in toil of an exacting sort. Hence the need of including them in the newer calculations of food requirement in relation to industry. * * * Grouping the operations of these persons (female munition workers) in the sequence of severity of the labor involved, it is concluded that light turning and forging need about 100 calories per square meter per hour. The data for other operations are as follows: For tool setting, heavy turning, stamping, finishing, and shell hoisting, 125 calories; for gauging, walking, and carrying, 160 calories; for more arduous labor, 180 calories. Translating these findings into food fuel requirements for the entire day, after allowance is made for culinary and alimentary waste, etc., the needs amount to 2,800, 3,100, 3,500, and 3,800 calories, respectively, per day. The figures cited show that the energy requirement of the lightest class of workers may be only about three-quarters that of the heaviest. Nevertheless, the remuneration of the kind of work conducted by the latter is often much less than that of several operations calling for many fewer calories. Even after making allowance for one and a half nonworking days, the weekly calory requirement of the two most unlike groups ranges from 17,000 at one extreme to 21,500 at the other. Any scheme of remuneration that aims to make returns adequate to keep the cost of food at a reasonably low proportion of the total income must take into account the decidedly greater food needs of those who often represent the least well-recompensed group. Thus, a food allowance of \$10 a week which just suffices for the less active worker must be augmented to \$13 in case the greater effort is expended. As the English experts now remind us, in any scientific appraisal of the income needed to maintain an accepted standard of living, it is essential to determine the minimal expenditure necessitated by the occupation of the wage earner. Variations in the physiologic demand translated into terms of money may nowadays be not inconsiderable.

The Use of Psychiatry in Industrial Medicine.

NEUROPSYCHIATRY proved itself of undisputed value in the medical history of the war. Its application to industrial medicine now appears to be accepted as a logical consequence, and references to the training and work of the industrial psychiatrist, the psychiatric nurse, and social worker are common, although their meaning is still somewhat cryptic so far as the average reader is concerned. It is, therefore, of special interest to see outlined clearly a probable field for the activities of the psychiatrist in industrial medicine and a goal toward which his work may be hopefully directed during the near future. A lucid statement as to what seems to be a reasonable application of psychiatry to industrial hygiene under the present limited understanding of this branch of medicine, combined with the limitations imposed upon its practice by industrial conditions, is presented by Dr. Stanley Cobb, neuropsychiatrist in industrial hygiene of the Harvard Medical School, in the *Journal of Industrial Hygiene*.¹

¹ Applications of psychiatry to industrial hygiene, by Stanley Cobb. *Journal of Industrial Hygiene*, November, 1919, pp. 343-347.

Dr. Cobb believes that much of the chaos in industry to-day is due to the unhealthy mental condition of the workers, and that this unhealthy condition is only the natural consequence of long endurance of an environment which ignores the fundamental needs of human nature and thus represses normal emotional and mental expression. He considers it no exaggeration to agree with Carleton Parker in saying that "Modern labor unrest has a basis more psychopathological than psychological, and it seems accurate to describe modern industrialism as mentally insanitary."

Stated in nontechnical language, the practical usefulness of industrial psychiatry lies in the study of the individual worker and his environment. The author thinks that a hopeful aspect of the present situation is the fact that the technical literature in the fields of political economy, education, industrial management, psychology, medicine, and social service shows "a feeling of broad humanitarianism, a desire to understand each member of the industrial system as an individual, and a reaction against the old system of exploiting labor to produce wealth."

He believes that the careless methods of reasoning regarding human nature which are a part of the orthodox tests must be exchanged for intelligent analysis of human motives, and that by so doing various phenomena such as business confidence, the release of work energy, the decay of workmanship, decline in the thrift habit, and labor unrest may be properly interpreted. He quotes Parker to the effect that the workman has about "16 instinct unit characters" which require satisfaction in the same degree as is usually provided for the college student. The same author in discussing the I. W. W. states that in the thwarting of these instincts and the limiting of the opportunities of the worker to obtain the happiness, personal development, and aid when sick that he needs, a state of mind amounting to an industrial psychosis is induced and that the I. W. W. are merely symptoms showing the neglect in these respects of industrial workers in this country. These "mentally insanitary" conditions may be corrected not only by shorter hours and increased pay but by the education of children so that they may learn how to use their leisure time properly.

Dr. Cobb believes that economists are outdistancing physicians in abandoning cut and dried methods and ideas, and that in developing mental hygiene in industry the physician must forget orthodox psychiatry and substitute an individual psychology which will take into consideration the reaction of individuals to their environment.

A hypothetical case is cited of what is commonly known as "nervous breakdown" in a department store employee, which might

have been prevented by a half-hour interview of an intelligent psychiatrist, leading to a little material assistance and a simple readjustment of the woman's personal problem. Such cases, variously called "neurasthenia," "psychasthenia," and "psychoneurosis" are common in wards and dispensaries, it is stated, where the doctors do little for them, the need being for an investigation and readjustment of the patients' personal problems. These conditions and need for this kind of treatment are found not only among people positively ill but among the restless, inefficient, and the radical elements of society. "Peabody and his collaborators found an interesting example of this in the cases of Effort Syndrome studied at U. S. A. General Hospital No. 9. A striking number of the histories showed that in civil life these men drifted from one employment to another, never breaking down enough to consult a physician, but adding their number to the shifting, inefficient labor element so costly to employers. It took the rigor of army life, with no possibility of escape by moving on, to bring out their symptoms. Before these people have left their work or have been fired for inefficiency, they should be interviewed by some one competent to understand them and their probable troubles. At such times advice from a physician, the loan of some money, a visit to a sick child or wife, or any of the thousand possible personal and individual aids, might save the worker from becoming soured, keep him from joining the ranks of the discontented, and prevent the development of a litigant and paranoid personality. * * *

When the instincts for self-assertion, creation, and excitement are suppressed through the workings of the present industrial system the result is an abnormal frame of mind which is evidenced in striking, drinking, etc., unless some outlet for the workers' energies is provided. This whole field is so large, however, that Dr. Cobb believes the average industrial physician will be satisfied to watch for and treat sympathetically the psychotic symptoms as they appear in individuals.

In regard to the claims made as to the value of mental tests of applicants for industrial positions, he believes that they are of use from the point of view mainly of determining subnormal individuals, although they are of service in reducing misfits in shops—a condition conducive to mental breakdowns.

While mental fatigue has received much attention from psychiatrists, Dr. Cobb thinks that overwork is not the fundamental cause of neuroses or psychoneuroses but that these are fundamentally emotional breakdowns. Although the symptoms are similar to those of neuromuscular fatigue, this is cured by simple rest, which is not the case in the nervous diseases under discussion.

The mechanism of such a neurosis is typically something like this: An individual is in an intolerable situation which he is constitutionally unable to dominate; the reaction of a neurosis sets in with depression of spirits, irritability, preoccupation, self-pity, etc., but a conventional cause for the decreased efficiency must be found to rationalize the situation, so the individual calls it overwork. Obviously with this idea of overwork in mind the symptom usually acquired is fatigue or asthenia, but frequently symptoms more closely associated with the work are developed, such as paralysis of parts of the body necessary for work, muscular pains making work impossible, tremors, or even epileptiform seizures. * * * Work may of course be an etiological factor, but not through so simple a mechanism as accumulated fatigue. Work that represses emotional cravings often brings out neuroses, just as satisfactory work is the greatest curative agent we have for these conditions. Let us no longer fool ourselves into thinking that overwork, per se, is the cause of mental breakdown.

The problems of industrial psychiatry, therefore, summed up briefly are: Prevention of mental breakdowns by giving the worker the proper environment and removing causes of discontent, and treating such cases from an individual standpoint, as well as considering as psychiatric cases those persons who until recently have been given such unsympathetic names as "the groucher," "the kicker," "the trouble maker," and "the hobo."

A reasonable application of psychiatry to industry under present conditions would seem to be as follows:

1. Physical examination of all applicants for work.
2. Mental examination by (a) a period of training and observation, or (b) through mental tests.
3. Keeping in personal touch with employees by means of (a) good foremen, (b) a system for watching individual efficiency, or (c) a sympathetic staff with a psychiatric point of view in the employment management office, thus salvaging the men who might otherwise be fired.
4. Training the industrial physician to a knowledge of how human nature is constituted, not in conventional terms, but in the light of a dynamic and living psychology that considers the behavior of human beings in terms of instinctive sources of energy, integrated into motives, these motives needing outlet through energy transformation into satisfactory activity.

WORKMEN'S COMPENSATION.

Comparison of Compensation Laws in the United States, Including 1919 Legislation.¹

By CARL HOOKSTADT.

IN 1917 the Bureau of Labor Statistics made a comparison of the principal features of the workmen's compensation laws of the several States and Territories. This was published as Bulletin 240. Since then 33 jurisdictions have amended their compensation laws, while 5 new States² have been added to the list of those having such laws.

At present 42 States, the 3 Territories of Alaska, Hawaii, and Porto Rico, and the Federal Government have workmen's compensation laws upon their statute books.³ These laws range widely as regards both coverage and amount of benefits provided. In some of the States the scale of benefits is so low and the scope so limited that the compensation act is practically no improvement over the former employers' liability system.

Especially is this true of the recent Alabama act, which exempts all employers having less than 16 employees; provides no administrative commission; does not require employers to insure; and, the greatest weakness of all, permits settlements for less than the statutory amount of benefits. Furthermore, settlements between the employer and employee are final and not subject to review, except that cases in which periodical payments continue for more than six months may be modified on the ground of increase or decrease of incapacity due solely to the injury.

In attempting a comprehensible comparison of the various acts it is necessary to concentrate upon the more important features. The scope of an act—in other words, what industries are covered, what persons are compensated, and what exemptions are made—is perhaps of foremost importance. The amount of compensation received is probably the next important feature of a compensation law. This includes the compensation scale, the length of time for which compensation is paid, the maximum and minimum limits, the amount of

¹ The present article is a summary of a forthcoming bulletin.

² Alabama, Missouri, North Dakota, Tennessee, and Virginia.

³ North Carolina, South Carolina, Georgia, Florida, Mississippi, Arkansas, and the District of Columbia are the only jurisdictions still without such laws.

medical service provided, and the length of the waiting period. Other important features are the administrative system, provisions as to insurance, and type of injuries covered.

Compensation Systems.

Compensation laws may be either compulsory or elective. A compulsory law is one which requires every employer within the scope of the compensation law to accept the act and pay the compensation specified. There is no choice. An elective law is one in which the employer has the option either of accepting or of rejecting the act, but, in case he rejects, the customary common-law defenses are abrogated. The requirements as to insurance constitute another basis of classification. On this basis the laws may be classified as compulsory, including all laws in which some form of insurance is required, or optional, including laws in which no insurance is required. The following table shows the compensation States grouped according to these two classifications:

COMPENSATION STATES CLASSIFIED ACCORDING TO WHETHER LAW IS COMPULSORY OR ELECTIVE.

Compensation compulsory (13).		Compensation elective (32).	
Insurance required (12).	Insurance not required (1).	Insurance required (27).	Insurance not required (5).
California. Hawaii. Idaho. Illinois. Maryland. New York. North Dakota. Ohio. Oklahoma. Utah. Washington. Wyoming.	Arizona.	Colorado. Connecticut. Delaware. Indiana. Iowa. Kentucky. Maine. Massachusetts. Michigan. Missouri. Montana. Nebraska. Nevada. New Hampshire. New Jersey. New Mexico. Oregon. Pennsylvania. Porto Rico. Rhode Island. South Dakota. Tennessee. Texas. Vermont. Virginia. West Virginia. Wisconsin.	Alabama. Alaska. Kansas. Louisiana. Minnesota.

It will be noted that of the 45 compensation States¹ 13 are compulsory and 32 are elective as to compensation provisions, while 39 are compulsory and 6 elective as to insurance requirements.

¹ For the sake of simplicity all jurisdictions are referred to as States.

Very considerable differences appear in the methods provided by the laws of the 39 States in which insurance is obligatory. Thus the State may make provision for the carrying of such insurance, and require all employers coming under the act to avail themselves of such provision; or the State fund may simply offer one of alternative methods. Again, the State may refrain entirely from such action, but require insurance in private companies, stock or mutual; and lastly, self-insurance may be permitted, i. e., the carrying of the risk by the individual, subject to such safeguards as the law may prescribe.

The following table shows the groupings on the bases indicated:

COMPULSORY INSURANCE STATES, CLASSIFIED AS TO DIFFERENT KINDS OF INSURANCE ALLOWED.

State fund (17).		Private insurance (31).	Self-insurance (31).

West Virginia ⁵			West Virginia. ⁵
		Wisconsin.....	Wisconsin.
Wyoming.....			

¹ Idaho permits self-insurance. Employers who carry their own risk may insure in authorized guaranty companies.

² The New Hampshire law requires employers accepting the act to furnish proof of solvency or give bond, but makes no other provision for insurance.

³ Ohio permits self-insurance, but all employers are required to contribute their proportionate share to the State Insurance fund surplus.

⁴ Self-insurers required to contribute 4 per cent of their premiums to commission's maintenance fund.

⁵ West Virginia has practically an exclusive State insurance system. Self-insurance is allowed, but employers desiring to carry their own risk must contribute their proportionate share to the administrative expenses of the law.

Broadly speaking, the laws may be divided into four main groups or combination of groups, namely: (1) Exclusive State fund, (2) competitive State fund, (3) private insurance, either stock or mutual, and (4) self-insurance or where employers are permitted to carry their own risk. In most cases the employers have the option of several kinds of insurance. This does not hold true, however, of the States having strictly exclusive systems. In these cases no other form of insurance is permitted.

It will be noted that six States have such exclusive systems. In three of these, Nevada, Oregon, and Porto Rico, compensation is elective and insurance is therefore not absolutely compulsory, since employers need not accept the act, but should they accept, insurance in the State fund is compulsory. In North Dakota, Washington, and Wyoming both compensation and insurance are compulsory. In these six States the State becomes the sole insurance carrier. It classifies the industries into groups according to hazard, fixes and collects premiums, adjudicates claims and pays compensation. Two other States (Ohio and West Virginia) are nearly exclusive in character. They allow no private casualty company to operate, but permit self-insurance. Ohio permits employers to carry their own risk, though all such employers are required to contribute their proportionate share to the State insurance fund surplus. Self-insurers, however, are not permitted to insure their risk in private companies. West Virginia has practically an exclusive State insurance system. It permits no private insurance, but does allow self-insurance. The employers, however, who desire to carry their own risk must contribute their proportionate share to the administrative expenses of the law.

In the other 31 States having compulsory insurance laws some form of competition exists, or at least the employer is given an option as to the method of insuring his risk. In nine of these States¹ the laws provide for a State fund through which the State conducts a workmen's compensation insurance business in competition with private liability companies. Private casualty companies, however, are permitted to write compensation insurance in all of these States. Idaho differs somewhat from the other States having competitive State funds. It allows employers to carry their own risk and also permits substitute insurance schemes if the benefits provided equal those of the act. Self-insurers, however, as evidence of satisfactory security, may furnish a surety bond or guaranty contract with any authorized surety or guaranty company. Moreover, the attorney general has

¹ California, Colorado, Idaho, Maryland, Michigan, Montana, New York, Pennsylvania, and Utah.

held that the words "guaranty contract" includes insurance contracts.

Of the 39 compulsory insurance States, 31 permit private companies to operate, the only exceptions being the 6 exclusive States of Nevada, North Dakota, Oregon, Porto Rico, Washington, and Wyoming, and the States of West Virginia and Ohio.

Thirty-one States allow employers to self-insure or carry their own risk, the exceptions again being the exclusive States and Massachusetts and Texas. Employers who avail themselves of this privilege are required either to give proof of their financial solvency and ability to pay compensation or to furnish bonds or other security, or to do both. In several States such employers are also permitted to secure their compensation payments by guaranty insurance.

New Hampshire's compensation law is exceptional in that employers who accept the act must furnish proof of financial solvency or deposit adequate security, but the law makes no other provision as to insurance.

Scope or Coverage.

No State compensation act, even when full use of the elective provisions is taken into account, covers all employees. The nearest approach to universal coverage is the New Jersey act, which includes all employees, except casual laborers, public officials, and public employees receiving salaries in excess of \$1,200. The principal exemptions, in the order of their importance, perhaps, are: Nonhazardous employments; agriculture; domestic service; numerical exemptions, i. e., excepting employers having less than a specified number of employees; public employees; casual laborers or those not employed for the purpose of the employer's business; and employments not conducted for gain.

Hazardous Employments.

The following 13 States include only hazardous employments: Alaska, Arizona, Illinois, Kansas, Louisiana, Maryland, Montana, New Hampshire, New Mexico, Oklahoma, Oregon, Washington, and Wyoming. In these States the industries covered are enumerated in the act. In Alaska only mining operations are included, but, in the other States, the principal hazardous employments are covered, including manufacturing, mining, transportation, and construction work.

Numerical Exemptions.

Twenty-two States exempt employers having less than a stipulated number of employees from the operation of the act, as shown in the following table:

NUMERICAL EXEMPTION STATES CLASSIFIED ACCORDING TO NUMBER OF EMPLOYEES EXEMPTED.

Employers having less than—

3 employees (6).	4 employees (3).	5 employees (7).	6 employees (2).	10 employees (1).	11 employees (2).	16 employees (1).
Kentucky. Oklahoma. Porto Rico. Texas. Utah. Wisconsin.	Colorado. New Mexico. New York.	Alaska. Connecticut. Delaware. Kansas. New Hampshire. Ohio. Missouri.	Maine. Rhode Island.	Tennessee.	Vermont. Virginia.	Alabama.

Agriculture and Domestic Service.

Hawaii and New Jersey are the only States which include agriculture and New Jersey the only State which includes domestic service. In all other States these employments are excluded.

Public Employees.

The following 26 States include all public employees, including both State and municipal: California, Colorado, Connecticut, Hawaii, Idaho, Illinois, Indiana, Louisiana, Maine, Michigan, Montana, Missouri, Nebraska, Nevada, New Jersey, New York, North Dakota, Ohio, Oregon, Pennsylvania, Rhode Island, South Dakota, Utah, Virginia, West Virginia, and Wisconsin.

In the following 12 States the inclusion of public employees is only partial: Alabama, Louisiana, Kansas, Kentucky, Maryland, Massachusetts, Minnesota, Oklahoma, Porto Rico, Vermont, Washington, and Wisconsin.

In the following 7 States public employees are exempted: Alaska, Arizona, Delaware, New Hampshire, New Mexico, Tennessee, and Texas.

In addition to the foregoing exclusions, many States have special exemptions of more or less importance, the most frequent being the exclusions of highly paid employees, outworkers, and clerical occupations. Maine also excludes logging and Tennessee excludes coal mining.

Per Cent of Employees Covered.

The foregoing exclusions have to do only with the statutory scope of the compensation laws. But what do these various inclusions and exclusions really mean when applied in each State? How many employees are actually excluded through the nonhazardous, or numerical, or agricultural, or domestic service exemptions? Then again, how does the same statutory exclusion affect different States?

The exemption of agriculture in Rhode Island, for instance, is of little importance as compared to a similar exemption in Texas.

In the following table an attempt has been made to compute the percentage of employees covered by the compensation acts of the various States. The computations, though based upon a detailed analysis of the Federal occupation census figures, are in some cases merely estimates, and no claim is laid to such accuracy as the percentages would suggest. The aim has been, however, to maintain uniformity of treatment as between States, so that while the percentage of error for a given State may be considerable, the percentages given would show the relative status of each State with a reasonable degree of accuracy. The States are arranged in descending order of percentage of employees covered. All employees in employments covered by the compensation law are included irrespective of whether or not the employers in the elective States have accepted the act.

COMPENSATION STATES ARRANGED IN DESCENDING ORDER OF PERCENTAGE OF EMPLOYEES COVERED.

State.	Per cent of employees covered.	State.	Per cent of employees covered.
New Jersey.....	99.8	South Dakota.....	58.0

Waiting Period.

In most of the States, an injury to be compensable must cause disability for a certain length of time, no compensation being paid during this time. This noncompensable preliminary period is known as the "waiting period." In two States (Oregon and Porto Rico) there is no such waiting time, compensation being paid for all injuries producing any disability. The most common provision is that

disability must continue for more than one week, this being found in 22 States. Utah and the Federal Government require a waiting period of 3 days, 7 States of 10 days, and 13 of 2 weeks. In 21 States the waiting period is abolished entirely if the disability continues longer than certain specified periods.

The following table classifies the States according to length of waiting period:

COMPENSATION STATES, CLASSIFIED BY LENGTH OF WAITING PERIOD.

No waiting period (2).	3 days (2).	1 week (22).	10 days (7).	2 weeks (13).
Oregon. Porto Rico.	Utah. United States.	California. Connecticut (none if disabled over 4 weeks). Hawaii (none if partially disabled). Idaho. Illinois (none if disabled 4 weeks). Indiana. Kansas. Kentucky. Louisiana (none if disabled 6 weeks). Michigan (none if disabled 6 weeks). Minnesota. Missouri (none if disabled over 6 weeks). Nebraska (none if disabled 6 weeks). Nevada (none if disabled 2 weeks). North Dakota (none if disabled over 1 week). Ohio. Oklahoma (none if disabled 3 weeks). Texas. Vermont. Washington (none if disabled over 30 days). West Virginia. Wisconsin (none if disabled over 4 weeks).	Colorado. Maine. Massachusetts. New Jersey. Pennsylvania. South Dakota (none if disabled 6 weeks). Wyoming (none if disabled over 30 days).	Alabama (none if disabled 4 weeks). Alaska (none if disabled 8 weeks). Arizona (none if disabled over 2 weeks). Delaware (none if disabled 4 weeks). Iowa. Maryland (1 week if totally and permanently disabled). Montana. New Hampshire. New Mexico. New York (none if disabled over 7 weeks). Rhode Island (none if disabled over 4 weeks). Tennessee (none if disabled 6 weeks). Virginia.

Compensation Scale.

The actual amount of benefits received by injured workers is dependent upon the percentage scale, the weekly maximum, the periods for which compensation is paid, and the maximum amount payable in any individual case. The following table shows the maximum period and maximum amount of compensation for each State in case of death, permanent total disability, and partial disability:

MAXIMUM PERIODS AND MAXIMUM AMOUNT OF COMPENSATION PAYABLE IN CASE
OF DEATH, PERMANENT TOTAL DISABILITY, AND PARTIAL DISABILITY.

States.	Death.		Permanent total disability.		Partial disability.

United States.....	Death or remarriage.		Life.		During disability.	

Per Cent of Wages.

In all but three States (Oregon, Washington, and Wyoming) the amount of compensation is based upon wages. A number of States, however, provide fixed lump sums for certain injuries, but apply the percentage system to all others. In most of the States the prescribed percentage remains uniform for all injuries. A few States have varying percentages for different types of injuries, and in several States the percentage varies with conjugal condition and number of children.

In 18 States¹ the amount of compensation is 50 per cent of the employee's wages; in 4 States,² 55 per cent; in 9 States,³ 60 per cent; in 3 States,⁴ 65 per cent; and in 8 States⁵ and the Federal Government, 66⅔ per cent.

Weekly Maximum and Minimum.

The compensation benefits based upon percentage of wages are usually modified by weekly maximum and minimum limits which may materially affect the amounts, though to what extent depends, of course, upon the wage level. Two States (Alaska and Wyoming) have no maximum or minimum provisions; 5 States,⁶ have a weekly maximum of \$10 or under; 1⁷ has a maximum of \$11; 11⁸ have a maximum of \$12; 7,⁹ of over \$12 and under \$15; 8,¹⁰ of \$15; 6 States¹¹ and the Federal Government have a maximum of over \$15 to \$18; 2 States¹² have a maximum of \$20 or over; while 3 States¹³ provide monthly pensions of fixed amounts.

Death.

The benefits for death in most cases approximate three or four years' earnings of the deceased employee. The methods provided for determining compensation for death vary somewhat. Two States¹⁴ provide for fixed absolute amounts without reference to wages or length of time, and one State¹⁵ proportions the amount of compensa-

¹ Alabama (increased to 60 per cent in certain cases), Alaska, Arizona, Colorado, Connecticut, Delaware, Illinois (increased to 65 per cent in certain cases), Maryland, Montana, New Hampshire, New Mexico, Oklahoma, Porto Rico, Rhode Island, Tennessee, Vermont, Virginia, and West Virginia.

² Idaho, Indiana, Louisiana, and South Dakota.

³ Hawaii (total disability only; partial, 50 per cent; death, 25 to 60 per cent), Iowa, Kansas (specified injuries, 50 per cent), Maine, Michigan, Nevada (total disability only; partial, 50 per cent; death, 15 to 66⅔ per cent), Pennsylvania, Texas, and Utah.

⁴ California, Kentucky, and Wisconsin.

⁵ Massachusetts, Minnesota, Missouri, Nebraska, New Jersey (death, 35 to 60 per cent), New York, North Dakota, and Ohio.

⁶ Colorado, Louisiana, New Hampshire, and Virginia, \$10; Porto Rico, \$7.

⁷ Tennessee.

⁸ Alabama (increased to \$15 in certain cases), Idaho, Illinois (increased to \$15 in certain cases), Kentucky, Maryland, New Jersey, New Mexico, Ohio (death and permanent total disability, \$15), Pennsylvania, South Dakota, and West Virginia.

⁹ Montana and Vermont, \$12.50; Indiana, \$13.20; Connecticut, death and partial disability, \$18, other disabilities, \$14; Michigan, \$14; Rhode Island, total disability, \$14, other disabilities, \$10; Wisconsin, \$14.63.

¹⁰ Delaware, Iowa, Kansas, Maine, Minnesota, Missouri, Nebraska, and Texas.

¹¹ Utah, \$16; Hawaii and Oklahoma, \$18; Massachusetts, death and specified injuries, \$10, other disabilities, \$16; Nevada, \$9.23 to \$16.62; New York, \$15 to \$20; Federal Government, \$15.38.

¹² California, \$20.83; North Dakota, \$20.

¹³ Oregon, Washington, and Wyoming.

¹⁴ Alaska and Wyoming.

¹⁵ Porto Rico.

tion to the earning capacity and number and needs of dependents of deceased. Six States¹ provide for annual earnings for three or four years. The large majority of States, however, apply a wage percentage for specified periods. Of these, 2 States² pay death benefits for less than 300 weeks; 13³ for 300 weeks; 7⁴ for over 300 but under 400 weeks; 7⁵ for 400 to 500 weeks; while 6 States⁶ and the Federal Government provide benefits until the death or remarriage of the widow. Twenty-two States also place a limit upon the maximum amount payable in any one case. These maximum amounts range from \$3,000 in New Hampshire, South Dakota, and Wyoming to \$6,000 in Alaska. The Oklahoma law does not cover fatal accidents.

Permanent Total Disability.

Most States recognize the fact that a permanently disabled workman is a greater economic loss to his family than if he were killed outright at the time of the accident, and, consequently, provide greater benefits than in case of fatal accidents. Eighteen States⁷ and the Federal Government provide that for permanent total disability compensation payments shall continue for the full period of the injured workman's life. Three States⁸ pay benefits for 312 weeks or less; 7 States⁹ for 400 but under 500 weeks, 13 States¹⁰ for 500 to 550 weeks; and one State¹¹ for 9 to 15 years. Alaska and Wyoming provide fixed absolute amounts, while Porto Rico proportions the amount of compensation to the wage and age of the injured workman. Nineteen States also place a limit upon the maximum amount payable in any one case. These maximum amounts range from \$3,000 in South Dakota to \$6,000 in Alaska and Michigan.

¹ California, Kansas, New Hampshire, 3 years; Illinois, South Dakota, and Wisconsin, four years.

² Vermont, 260 weeks; Delaware, 285 weeks.

³ Alabama, Indiana, Iowa, Louisiana, Maine, Michigan, Minnesota, Missouri, New Jersey, New Mexico, Pennsylvania, Rhode Island, and Virginia.

⁴ Colorado, Connecticut, Hawaii, and Utah, 312 weeks; Kentucky, 335 weeks; Nebraska, 350 weeks; Texas, 360 weeks.

⁵ Arizona, Idaho, Montana, and Tennessee, 400 weeks; Maryland and Ohio, 416 weeks; Massachusetts, 500 weeks.

⁶ Nevada, New York, North Dakota, Oregon, Washington, and West Virginia.

⁷ Arizona, California, Colorado, Idaho, Illinois, Maryland, Missouri, Montana, Nebraska, Nevada, New York, North Dakota, Ohio, Oregon, South Dakota, Utah, Washington, and West Virginia.

⁸ Vermont, 260 weeks; New Hampshire, 300 weeks; Hawaii, 312 weeks.

⁹ Iowa, Louisiana, New Jersey, and Texas, 400 weeks; Kansas and Kentucky, 410 weeks; Delaware, 475 weeks.

¹⁰ Indiana, Maine, Massachusetts, Michigan, Oklahoma, Pennsylvania, Rhode Island, and Virginia, 500 weeks; Connecticut and New Mexico, 520 weeks; Alabama, Minnesota, and Tennessee, 550 weeks.

¹¹ Wisconsin.

Partial Disability.

Two methods for compensating partial disabilities are generally provided for. One method is based upon the percentage of wage loss occasioned by such disability, payments continuing during incapacity but subject to maximum limits. The second method is the adoption of a specific schedule of injuries for which benefits are awarded for fixed periods, the payments being based upon a percentage of wages earned at the time of the injury. Usually both methods of payment are provided for. The practice in most States is to pay a percentage of the wage for fixed periods for certain enumerated injuries and for all other injuries a percentage of the wage loss during disability. The number of injuries specified in the schedule varies in the different States, but provision is generally made for the loss of arm, hand, leg, foot, eye, fingers, and toes, and parts thereof.

In 36 States the schedules for enumerated partial disabilities are stated in terms of weeks. In 23 of these States¹ the amounts provided are in lieu of all other compensation benefits except medical service; in 10 States² and the Federal Government compensation is also paid for temporary total disability during the healing period in addition to the schedule amounts; in Massachusetts and Rhode Island, compensation is paid for total disability during the healing period and for partial disability thereafter, in addition to the schedule amounts; while Maine provides for continuing partial disability payments in addition to those provided by the schedule but not over 300 weeks in all. These facts should be borne in mind, therefore, in considering the following comparative table:

¹ Alabama, Colorado, Delaware, Hawaii, Idaho, Indiana, Iowa, Kansas, Kentucky, Louisiana, Maryland, Michigan, Minnesota, Montana, Nebraska, New Mexico, New York, Oklahoma, Pennsylvania, Tennessee, Texas, Virginia, and Wisconsin.

² Connecticut, Illinois, Missouri, Nevada, New Jersey, Ohio, Oregon, South Dakota, Utah, and Vermont.

¹ Payments under this schedule are exclusive of or in lieu of all other payments.² Payments under this schedule are in addition to payments for temporary total disability during the healing period.³ Payments cover total disability. Partial disability may be compensated at end of periods given for not over 300 weeks in all.⁴ Payments under this schedule are in addition to all other payments.

Comparison of Benefits.

Thus far the various compensation factors have been treated as individual units. In the following table an attempt has been made to determine what benefits would be received under each compensation law in a given accident. Four representative types of injuries were taken as follows: (1) Death, (2) loss of major hand at wrist, (3) total disability for a period of 4 weeks, and (4) total disability for a period of 13 weeks. The waiting period was deducted in com-

puting the benefits for both of the disability items and for the loss of the hand in case compensation for temporary total disability was provided by law.

The example taken was that of a married man, 35 years of age, receiving \$21 a week, and having a dependent wife, 30 years of age, and three normal dependent children, 3, 6, and 9 years of age. In computing the life expectancy of the injured man or his widow the American experience table of mortality was used.

The maximum benefits in each case have been given. The amounts computed for death include burial expenses where such are provided by law. It has been assumed that the loss of the hand resulted in a total disability of 26 weeks and a subsequent partial disability of 50 per cent for life. Several States have no schedules of specified injuries, and in such States the compensation for loss of the hand has been based upon the given percentage of wages for the given number of weeks limited by the maximum amounts. In such States, together with those States which provide for a continuing partial disability in addition to the specified scale, both compensations have been given, i. e., compensation for total disability only and compensation for total plus partial disability. Compensation for total disability during the healing period has been included in the amounts given for those States which provide for such benefits. For the total disability accidents, as already noted, the waiting period in each case has been taken into consideration and deducted from the amount of the compensation.

It has been the purpose to take an example which is most typical of all States and conditions. It is admittedly true that the specific example and the four items taken will result in a higher scale for some of the States than would have resulted had a different example been taken or had the whole scale of compensation benefits been considered. For example, compensation for the death of a married man with three children would result favorably for such States as Nevada, North Dakota, Oregon, Washington, New York, and West Virginia, which pay compensation until the death or remarriage of the widow.

In computing the money benefits no account has been taken of the present value of such benefits. A fixed lump sum paid outright at the time of the injury of course exceeds the present worth of the same amount paid in weekly installments over a period of years. In comparing the computed benefits, therefore, it is necessary to take this fact into consideration.

Nebraska.....	Unlimited.....	\$200			
Nevada.....	90 days ¹	Unlimited.			
New Hampshire.....					

¹ Additional service in special cases or in discretion of commission.

² Employees must pay one-half of medical cost.

It will be noted that three States (Alaska, Arizona, and New Hampshire) furnish no medical service except that in fatal cases involving no dependents the expenses of last sickness shall be paid by the employer. Six compensation acts ¹ provide unlimited service. Nine laws place no limitation upon the period during which medical treatment shall be furnished, but do limit the amount; while nine limit the period, but do not limit the amount. All of the other laws place limitations upon both period and amount.

Administration.

Some responsible administrative body is necessary to insure to the injured workman his rights under the law, and to see that he receives the full amount of his compensation immediately and regu-

¹ California, Connecticut, Idaho, North Dakota, Porto Rico, and the Federal Government.

larly. Eleven¹ of the 45 States, however, have no such administrative body. In these States compensation matters are settled directly by the parties concerned and in case of dispute the question is taken to the courts for adjudication.

Reports of Industrial Accident Boards.

Idaho.²

THE Industrial Accident Board of the State of Idaho submits as its first annual report an account of the operations of the law for a period of 10 months. Being of the nature of an introductory report, several pages are given to an account of compensation legislation in the United States, and more in detail to the history of the law of Idaho and the organization of the administrative board. An analytical statement sets forth the general provisions of the law of the State.

During the 10 months covered by this report there were 3,849 accidents reported, of which 3,083 have been finally disposed of. The law provides for a seven-day waiting period, and 1,463 cases of injury were of such brief duration as to receive no benefits on this account. Awards were made in 1,565 nonfatal cases, aggregating \$69,293.62, or an average of \$44.28 per case. In 18 fatal cases the awards aggregated \$95,664.74, or an average of \$5,314.71. The same average for 720 nonfatal and 43 fatal cases unsettled would bring the actual and estimated awards and compensation for the first 10 months up to \$425,372.49. To this should be added hospital bills totaling \$56,354.40, making \$481,726.49 as the total amount of benefits accruing to injured workmen during the first 10 months' operation of the law.

Computation is made of the wage loss actually suffered by reason of the waiting period of seven days prescribed by the act. This amount is based on the average reported wage of \$4.15 per day, and aggregates \$60,116.90. As the law provides for benefits on a basis of 55 per cent of the wages, it is evident that the injured workman bears not only the 45 per cent wage loss in every case, but the total of this additional \$60,116.90 by reason of such a moderate waiting period as the seven days provided for by the Idaho statutes.

The nature of the industries of the State is clearly reflected in the classification of accidents by industries, 1,209 occurring in lum-

¹ Alabama, Alaska, Arizona, Kansas, Louisiana, Minnesota, New Hampshire, New Mexico, Rhode Island, Tennessee, and Wyoming.

² First annual report of the Industrial Accident Board of the State of Idaho from January 1, 1918, to October 31, 1918. Boise, 1918. 24 pp.

ber and timber, and 1,067 in mining, quarrying, and metallurgy, these two groups furnishing more than two-thirds of the 3,083 closed cases of accidents under consideration. Manufacturing afforded but 112 cases, while construction furnished a larger number—197 in all. The nature of the industries also affects the number of fatal accidents, the report stating that:

The death rate in Idaho has gone far beyond the national standard, which is 0.932, or less than 1 per cent, while our experience has proven 1.584, or over 1½ per cent; that is, in every 100,000 accidents in Idaho there would be 1,584 deaths, while according to the national standard there should be but 932. There are two very good reasons for this: First, the proportion of workmen in the two hazardous industries of lumbering and mining is greater in Idaho than in the average State; second, our lumbering operations in great part are carried on in hilly country, which also is subject to continued snowfall and cold weather, with resultant increase in hazard far above level country and more moderate climatic conditions.

A suggestive incident relates to the refusal of a municipality to insure its liabilities under the law, it claiming a right to carry its own risk. Two serious accidents occurred to its employees during the year, so that it "finds itself confronted with a liability approximately ten times greater than would have been the cost of insuring with the State fund as contemplated by the law."

The law permits payments to nonresident alien dependents only in proportion as the country of citizenship permits payment in corresponding circumstances; but difficulty has been experienced by the commission in discovering the provisions of the laws of residence of a number of claimants, and in view of the extreme unlikelihood of any practical reciprocal adjustment ever being made, this provision would seem to be more of a burden than any practical benefit, unless the purpose is to exclude nonresident alien beneficiaries.

Maryland.¹

THIS report is limited to a brief statement of the operations of the board, the value of laws of this type being regarded as so fully established as to require no discussion. During the year 42,570 reports of industrial accidents were received, of which 5,015 claims were disposed of during the year; 163 were claims based on deaths. Claims were allowed in 4,826 cases and disallowed in 387 cases; 129 cases remained pending, as against 310 pending cases remaining from the preceding year. Benefits awarded aggregate \$884,919.24, of which \$120,930 was reported as medical expense on accidents not resulting in claims.

¹ Fourth annual report of the State Industrial Accident Commission of Maryland, for the year November 1, 1917, to October 31, 1918. Baltimore, 1919. 40 pp.

Out of 5,015 claims through the year, 163 were for fatalities, 6 for permanent total disability, and 458 for permanent partial disability. Mining and quarrying furnished 263 accidents, manufacturing 2,058, and construction 1,544.

A State accident fund is maintained in competition with other insurance systems, having in force at the end of the year 1,438 policies. This is a comparatively small fraction of the 9,456 employers insured under the act, but an encouraging growth is indicated in the fact that, as compared with the past year, the net premiums show an increase of 46 per cent, the total for the year covered being almost equal to the combined premiums of the two preceding years. The loss record was 49.6 per cent on the premiums written and the expense ratio was 8.4 per cent. A catastrophe reinsurance of 4 per cent and a catastrophe reserve of 10 per cent bring the total cost of insurance up to 72 per cent on the premiums written. This report was regarded as "exceedingly gratifying" in view of the number of inexperienced workmen employed in numerous war activities. The fund was the subject of an audit by the State auditor during the year, and though some minor errors in bookkeeping were disclosed, the books and accounts were reported as "correct." Assets aggregate \$369,921.63, with a total net surplus of \$199,046.96.

Montana.¹

THE Industrial Accident Board of Montana is charged with the administration not only of the compensation law of the State but also with the inspection of mines and steam boilers. Nearly one-half of the present volume is taken up with an account of its inspection work and a reproduction of the laws enforced by it.

In the portion devoted to the compensation law, several pages are given over to a general consideration of the principles involved; a reproduction of the opinion of the Supreme Court of Montana in the case of *Shea v. North Butte Mining Co.*, in which the constitutionality of the compensation law was upheld; discussions of particular features of the law, medical and hospital service, waiting period, coverage, State funds, etc. The problem of the crippled workmen is considered at some length, and rehabilitation is strongly urged. It is estimated that the 609 permanently crippled men, reported during the four years of the operation of the law, could be restored to industry at a total cost not exceeding one-half of the

¹ Fourth annual report of the Industrial Accident Board, for the 12 months ending June 20, 1919. Helena, 1919. 437 pp.

economic loss represented by their food alone, and that their restoration to industry would give a net gain of \$280,000 a year. It is recommended that a rehabilitation fund be formed by contributions from employers in cases where fatal accidents occur leaving no beneficiaries or dependents, as is done in the State of New York to provide a fund for compensating second injuries resulting in total disability.

A point of interest is the number of cases (in excess of 6,000) that have come before the board for adjudication during the period of its existence without a single appeal being taken to the courts from the rulings made. The case taken to the supreme court was on a friendly suit for the purpose of securing an authoritative ruling as to the construction of the law.

Three plans of insurance is permitted: First, self-insurance; second, insurance in a private company; and third, insurance in a State fund. Under the first and last plans there have been practically no disputes and very few delays in settlement, the State fund showing but 14 cases in which the payment of compensation was delayed beyond the day when it was due. "Unfortunately, under plan 2, many of the insurance companies are dilatory in the payment of compensation, and in many cases the first payment on disability cases has not been made until 90 days after the accident, due to the necessity of the claim being sent to the eastern office of the company for adjustment."

The statistical tables show the accidents, awards, etc., under each insurance plan, separately. Risk classes are reported on separately as to the rates, incomes, benefits, and balances in the State fund. The total assets of the fund amount to \$500,462 at the end of the year, with an available balance of \$94,279. The premium income for the year covered by the report was \$181,709, of which \$68,708 was paid out in compensation. For the four fiscal years during which the fund has been in existence the premium income was \$386,390, of which \$64,835 has been expended for compensation, distributed as follows: For temporary total disabilities, 40 per cent; for permanent partial disabilities, 18 per cent; for fatal injuries, 27 per cent; doctors and hospital bills, 11 per cent; funeral expenses, 2 per cent.

The report shows 1,970 employers under the act as of June 30, 1919, with 50,386 employees; of these, 64 employers with 24,848 employees are self-insurers; 874 employers with 10,857 employees are insured in private companies; and 1,032 employers with 14,681 employees are insured in the State fund. During the year 1918-19, 5,475 accidents were reported, of which 122 were fatal; 1 caused a permanent total disability; 151, permanent partial disability; and 5,201, temporary total disability.

A computation is made of the time and wage loss on account of accidental injuries during the four years covered by the law. The total time loss is given as 256,738 days, entailing a wage loss of \$1,075,085, or an average of \$4.19 per day. The greatest loss is 132,677 days in mining other than coal, the wage loss being \$573,693; next in order is smelters, 30,435 days, with a wage loss of \$125,107. Coal mining and logging and lumbering come next in rank. Evidently, in addition to the above, should be considered the loss due to accidental death: 688 fatalities have been reported, the average age of the decedents being 33 years. On the basis of the American experience table of mortality, these deaths represented a time loss of 22,015 years, or at the average daily wage in the State a wage loss of approximately \$30,000,000.

Medical Treatment for Government Employees Under Federal Compensation Act.

HOW the Employees' Compensation Commission of the United States Public Health Service has dealt with the problems involved in securing proper and adequate medical service for injured Government employees is explained by Dr. John W. Trask, medical director of the commission, in the October issue of *Modern Medicine*.¹ The experience of the commission is not only interesting, but, being practically suggestive, ought to be of value to all who are concerned in the provision of hospital benefits for large numbers of employees.

The benefits provided by the United States Employees' Compensation Act to employees of the Government injured in the performance of duty are of three classes: (1) Medical and hospital treatment; (2) money compensation for loss of wages in excess of three days; and (3) money compensation to the surviving dependents of employees dying as a result of injuries. Dr. Trask's article concerns only the first of these classes, which is covered by the following section of the law:

That immediately after an injury sustained by an employee while in the performance of his duty, whether or not disability has arisen, and for a reasonable time thereafter, the United States shall furnish to such employee reasonable medical, surgical, and hospital services and supplies unless he refuses to accept them. Such services and supplies shall be furnished by United States medical officers and hospitals, but where this is not practicable shall be fur-

¹ Medical and hospital treatment under United States compensation act. By John W. Trask. In *Modern Medicine*, October, 1919, pp. 489-495.

nished by private physicians and hospitals designated or approved by the commission and paid for from the employees' compensation fund. If necessary for the securing of proper medical, surgical, and hospital treatment, the employee in the discretion of the Commission, may be furnished transportation at the expense of the employees' compensation fund.

Reasonable medical service is defined by Dr. Trask as unlimited medical service.

It [the law] provides that medical service for an injury shall be furnished for a reasonable time after the injury. As a reasonable time will be as long as the injured person has need of treatment on account of the injury, the service is coexistent with the need thereof.

The provision that the medical and hospital service furnished shall be reasonable limits it to that which may properly be considered to be effective in bringing about the restoration of damage done by the injury; that is, the restoration in so far as possible of the injured person to the physical condition possessed by him previous to the injury. This implies efficiency of the service rendered.

The problem, then, becomes entirely one of how best to secure efficient medical and hospital service for Government employees who may be injured while at work in any part of the country. As most injuries are of an emergency nature and require immediate treatment, it is necessary that such treatment be available wherever employees are located. Such provision has been made by the dispensary service furnished by the War Department at its arsenals, principal ordnance plants, and supply depots, and by the Navy Department at its navy yards; and the United States Public Health Service has cooperated by making freely available to all beneficiaries of the compensation act its hospitals and dispensaries, wherever located. When, however, the injury occurs in a locality in which no Government hospital or dispensary is provided, it must be treated by a physician or at a hospital designated by the commission; and as United States hospitals and medical officers have a relatively limited distribution, the designation of such hospitals and physicians involves problems of great importance for which the commission has found the best solution only through its experience in dealing with them. In this connection Dr. Trask says:

The idea was first held that the necessary medical, surgical, and hospital service for injured employees could be best obtained wherever Government hospitals and dispensaries were not available by the designation and use of hospitals, as it was believed that the hospital represented group medicine; that the injured employees could be sent to the hospitals and there would receive the attention of whatever specialist the nature of their various injuries indicated, be it the general surgeon, orthopedic surgeon, ophthalmologist, neurologist, roentgenologist, pathologist, or bacteriologist; that the question of medical and surgical treatment could be left to the hospital; and that only where there was no Government hospital or dispensary, or private hospital, would there be need of designating private physicians.

The commission, however, early found that leaving the question of medical and surgical treatment to the hospital was not a practicable arrangement; that the hospital service as relates to bed, board, and nursing was in most city hospitals a thing quite apart from the furnishing of the efficient medical and surgical attention implied by the Federal compensation act. Patients sent to hospitals were frequently given scant consideration. If assigned to a particular physician, it was often to one of lesser experience. Often the cases seemed to be left entirely to the inadequate attention of the busy resident staff. This was true in general, excepting in the proprietary hospitals in the smaller towns. It was true even of the better hospitals, one might say of the best hospitals, of the larger cities.

This point is illustrated by detailed accounts of several cases in which suffering was entailed and recovery delayed by inefficient treatment given the patients at the hospitals to which they were sent. The commission has now adopted the method of designating, in connection with each hospital, one or more competent, well-trained surgeons of established reputation, and it requires that every compensation case going to the hospital shall be placed under the immediate care of one of the designated physicians. Under this arrangement the hospital renders its bill for hospital care and the surgeon renders his bill for professional attention. "This insures to the injured employee the personal and interested service of a competent physician, and gives to him the same close attention he would receive as a private patient of a reputable, competent practitioner. If the services of other specialists or consultants are required, the attending surgeon secures such services, submitting bills therefor."

When the commission first began the designation of physicians and hospitals the question of the required qualifications of the physicians or surgeons selected seemed to present a serious problem, as it was feared that the charges of highly qualified, experienced men, particularly surgeons, would be exorbitant. Experience soon proved, however, that the commission could not afford any but the most competent men available in the locality, as the handling of injury cases by men of insufficient training or experience frequently resulted in the making of permanent cripples, particularly in bone and joint injury cases, which might have been prevented by the services of competent orthopedic surgeons. In this connection Dr. Trask says:

The commission was happy and, in a measure, surprised to find that the bills presented by the well-trained and experienced surgeons were in general no greater than the bills presented for treatment of similar cases by men of inadequate and insufficient training. In fact, the charges made by the most competent men have been on the whole the most reasonable, particularly so when the much better service rendered is considered. A permanent cripple is a charge against the commission as long as he lives. Every employee restored to work, every cripple prevented, is an economy.

Another question which had to be decided by the commission after due consideration was whether or not to adopt a schedule of rates or charges for medical services. The decision was against such a fee schedule.

The plan adopted was to use as great care as possible in designating under the provisions of the act, only men with adequate training and considerable experience in surgery, of mature age, and of established reputation in their respective communities; and then to explain to those appointed that the purpose of the commission was to secure service; that in bone or joint injuries the commission expected X-ray examination and control; that where there appeared to be any reason therefor, neurologists, pathologists, or other specialists should be called in consultation; that the purpose of the commission was to make the best possible restoration of the injured person; and that as regards charges the commission merely expected that the charges would be reasonable for the service rendered.

The commission has found that this arrangement was acceptable to and welcomed by the class of men they selected—a class of men whose services it would have been impossible to obtain under the limitations of a fee schedule—and this notwithstanding the fact that the fees actually charged have been within the limits of any reasonable fee schedule which might have been adopted. Should the commission find one of its designated surgeons giving inadequate service or making unreasonable charges, it has recourse to cancellation of his designation; but there have been exceedingly few instances in which this has been called for.

The plan now followed by the commission is to designate the physician and then to ask him to indicate the hospital he would like to use for the injury cases requiring hospital treatment. The injured employee is sent to the surgeon or physician, and, if a hospital case, he is then sent to the hospital, or, if the injury is serious, he is sent direct to the hospital and the physician is notified. The patient is usually placed in the general ward of the hospital, but a private room and special nurse are allowed when, in the opinion of the physician, such are necessary. In fact, any service actually needed by the patient is allowed. In the event of a patient who is assigned to a ward desiring a private room for his own convenience he may secure one by paying the difference between the ward rate and the rate for the room.

The experience of the commission is summed up briefly as follows:

- (1) In Government hospitals and dispensaries the service rendered varies with the training and personality of the members of the staffs.
- (2) In non-Government hospitals good medical and surgical service is usually not obtained unless the cases are put in charge of selected physicians or surgeons paid by the commission.
- (3) Paying the "doctor's" bills for an injured employee is not synonymous with furnishing reasonable medical and surgical service.
- (4) Reasonable and adequate medical and surgical service can be obtained only from conscientious physicians and surgeons with good training and experience.

SOCIAL INSURANCE.

Attitude of Medical Society of the State of New York Toward Compulsory Health Insurance.

THE attitude of the Medical Society of the State of New York toward compulsory health insurance, proposed for legislative enactment, is set forth in a report drawn up by a special committee appointed by the president of the society to study the subject of compulsory health insurance with special reference to its relationship to the medical profession, which report was adopted by the house of delegates of the society on November 22, 1919. The report gives a brief résumé of the subject, outlines the provisions of the proposed legislation, and concludes with a statement of findings and a recommendation that the medical society "unqualifiedly oppose the enactment by the Legislature of the State of New York of any law instituting a system of compulsory insurance against sickness because of its menace to the public health of the State." The committee's statement, together with its findings and recommendation, as adopted is as follows:

The essential components of all compulsory health insurance schemes are two: First, the provision of a cash indemnity during a relatively brief period of incapacity to labor due to illness; secondly, the provision to the insured and their dependents during a determinate time of so-called medical benefits which comprise medical, dental, and nursing attendance, hospital and sanatorium accommodations, maternity attendance, drugs, and all necessary medical and surgical supplies.

The proponents of this legislation rest their demand for the institution of this scheme in America upon two main allegations: First, that a very large amount of poverty is due to illness causing consequent unemployment and loss of income; secondly, that a vast amount of the population receives inadequate and insufficient medical attendance; that is, that medical attendance is grossly deficient both as to quantity and quality.

With the general features of the measures proposed for the legislative enactment of the compulsory health insurance scheme in this State your committee will deal only in the briefest manner; the matter is familiar to you. It is proposed to establish an administrative machinery radiating downward from a division of the State industrial commission composed of a certain number of commissioners appointed by the governor who, in turn, appoint a chief of the

bureau of health insurance. Subordinate to the commission and acting under regulations made by the commission function the boards of directors of the local funds composed of three members elected by the employer members of the local fund, three elected by the employees and one additional elected by these six. All the affairs of the funds are administered locally by these boards of directors. Each local fund employs a medical officer who is permitted to practice and who is practically the medical supervisor of the administration of the benefits of the act. The medical profession is not represented upon any executive body under the proposed law, but is permitted to function solely through advisory committees, local and State. Its sole statutory representative has an administrative, not an executive function.

After consideration of the evidence put forward by the proponents of this legislation in support of their statement that a large proportion of the poor have been impoverished through unemployment caused by illness, your committee finds that none of this evidence is unimpeachable and that it rests upon largely a priori reasoning. The preponderance of evidence is against the fact that any considerable amount of impoverishment is caused by illness; moreover in those cases where impoverishment is caused by illness, it is due to the long-enduring disability preceding death occurring in the chronic diseases, especially tuberculosis, chronic heart disease, cancer, chronic joint infections, renal and vascular disease which cause a disability long exceeding the period of 26 weeks during which the insured is entitled to benefits under the scheme. The statistics of the labor bureau of New York State show that in the main disability from all causes, including accident, injury, and illness, is the source of, on the average, only 5.7 per cent of unemployment, about the same amount as that caused by weather conditions (5.6 per cent) or a little less than half that caused by labor disputes (10.6 per cent), or one-thirteenth that due to lack of work (74.6 per cent). A survey entitled "Poverty in Baltimore and Its Causes; Study of Social Statistics in the City of Baltimore," by the Alliance of Charitable and Social Agencies, McCoy Hall, Baltimore, Md., November 15, 1918, gives strong evidence of the small part illness plays in the cause of poverty; moreover, it evidences strikingly the fact heretofore stated as to the relationship of prolonged disability not covered in any scheme for health insurance to the relatively few cases of impoverishment due to sickness. Your committee would find, therefore, that short illnesses causing ephemeral disability bear no relation to poverty; that where impoverishment is caused by illness it is in all instances due to long-continued disability; and that illness is but a very minor cause of unemployment as compared even to the conditions of the weather or labor disputes.

Your committee is unable to find any available evidence that will bear inspection proving that, in the main, medical attendance in this State is grossly deficient in quantity or grossly defective in quality. If these facts were true it is unable to satisfy itself that the people of this State would receive a larger and closer degree of medical attention where one physician may care for either 2,000 or more patients as permitted under this scheme than they now receive where the proportion of physicians to population is about as 1 is to 780. Moreover, your committee is satisfied that the quality of medical attention would no more be benefited in the United States than it has in Germany, Austria, and Great Britain, by the conversion of medical practice from its present plan into an enormous scheme wherein the practitioner would be employed from year to year under contract, and in the final analysis subject to lay dictation as to means and methods of practice.

Your committee feels very strongly that the inquisitorial powers which would be conferred upon the State industrial commission and its agents, and upon the local boards of directors must be considered in its effect upon the public health, and especially as to the rôle it might assume in submerging and nullifying the activities of the present State department of health which has played so large a part in the reduction of morbidity and mortality by means of preventive, not palliative, medicine.

There is no uncertainty about the evidence that the relative morbidity rate, mortality rate, infant-mortality rate, and maternal-mortality rate has been much more materially reduced in the United States during the past 20 years than it has been in Germany and Austria, where compulsory health insurance, not alone, but the whole scheme, including invalidity and unemployment insurance and old-age pensions, have been in force. It can, therefore, be seen that compulsory health insurance, as such, plays a very small part in the reduction of length and severity of illness, and that on the whole it has been of extremely little value medically in those countries, while it has been the cause of a profound deterioration in medical service and medical morale. Even in England, where it has been in operation for a comparatively short time, it has proven so defective and ineffective for the purpose for which it was instituted that it is now proposed to inaugurate the plan of State medicine to supplant it.

Your committee therefore finds:

1. There is no necessity for the institution of a scheme covering the major portion of the population of the State, providing for the institution of contract medical practice on a colossal scale in order to furnish medical attendance and other services.

2. In those countries where this scheme has been in operation for many years it has caused a deterioration in medical morale and medical service, and that its effect in this State would be the same; that is, a lessening in the quality of medical service.

3. In comparison with those countries where this scheme has been in operation, the United States shows a more marked reduction in mortality rate, both general and as affecting maternal and infantile mortality rate. Apparently the morbidity rate under the scheme has doubled instead of being diminished in Germany and Austria since the institution of the social-insurance plan.

4. There is danger of the scheme gradually undermining the functions so extremely valuable to the community at present subserved by the State department of health.

5. Owing to the paucity of accurate and unimpeachable data collected by means of an unbiased investigation, your committee recommends that the legislature of 1920 be requested to appropriate a sufficient sum of money for the use of the health department and such other departments in association with it as it requires for the purpose of making a survey of the State of New York to determine the amount and character of illness in its economical relation to the Commonwealth.

6. If additional legislation is to be enacted, it should provide for a greater development of existing agencies for preventive medicine, together with the extension on a large scale of the present county and municipal functions for both preventive and remedial medicine, and it should make further provision for the inauguration of more widely extended utilization of the present institutional clinical facilities for the diagnosis and treatment of disease in order to facilitate the access of the entire population of the State to modern methods in the practice of medicine.

Your committee therefore recommends that the house of delegates, and, through them, the Medical Society of the State of New York, unqualifiedly oppose the enactment by the Legislature of the State of New York of any law instituting a system of compulsory insurance against sickness because of its menace to the public health of the State.

Report of British Departmental Committee on Old-Age Pensions.¹

THE departmental committee appointed by the Treasury in April, 1919, "to consider and report what alterations, if any, as regards rates of pension or qualification should be made in the existing statutory scheme of old-age pensions" have presented their report.²

Old-age pensions were first introduced in the year 1908. The rate was 5s.³ to those whose yearly means did not exceed £21 a year (about 8s. a week), while reduced pensions were payable to those whose incomes exceeded £21 but did not exceed £31 10s. a year (about 12s. a week). The pensioner must have attained the age of 70; must be a British subject, resident in the United Kingdom; and must not be in receipt of poor relief (other than medical or surgical relief). There were also certain disqualifications for convicted criminals, for pauper or criminal lunatics, and for those who "had habitually failed to work according to their ability, opportunity, and need."

Various changes, mostly of detail, were made by an amending act of 1911. During the latter part of the war and up to the present time an additional allowance of 2s. 6d. a week has been given to pensioners whose means do not exceed the statutory limit (of £31 10s. a year); and existing pensions have not been reduced or revoked in consequence of increase of means if such increase was due (1) to separation allowances or voluntary allotments; (2) to temporary voluntary assistance, up to 5s. a week, to meet the increased cost of living; or (3) to additional earnings, provided that the total means do not exceed 30s. a week.

The total number of persons in receipt of old-age pensions on March 31, 1919, was 920,198, of whom 911,706 were in receipt of the additional allowance granted during the war. Over 90 per cent of the pensions were of the full value of 5s. The number of claims made during the year ended March 31, 1919, was 142,084. The number of claims rejected, or pensions revoked, during the year was

¹ Reprinted from the Labour Gazette, London, November, 1919, p. 465.

² Cmd. 410. Price, 3d. net.

³ Owing to present fluctuations in value of the English pound conversions are not made into United States money. Normally the par value of the pound is \$4.87.

47,766; and in addition 6,615 claims lapsed, or were withdrawn, etc. The number of pensioners who were reported to have died during the year was 105,746. The total amount paid in pensions rose from £8,468,000 in the year ended March 31, 1910, to £12,607,000 in the year ended March 31, 1916. The amount in the last financial year (ended March, 1919) was approximately £11,731,000, to which must be added the additional allowance, amounting to £5,997,000.

The majority report, signed by the chairman and nine other members of the committee, makes the following recommendations:

(1) Rate of pension to be increased to 10s. a week, absorbing the additional allowance of 2s. 6d.

(2) Abolition of means qualification.

(3) Qualifying age to remain at 70, pending inquiry as to the possibility of extending the scope of the insurance acts. (The committee emphasize the need for this inquiry, as an integral part of the whole question of "public assistance" on a reformed basis.)

(4) Outdoor relief, or "home assistance," not to be a disqualification for receipt of pension.

Other recommendations deal with eligibility of aliens—in which connection it is recommended that the British-born wives of aliens should not be disqualified—with the qualifying period of residence, and with other matters. It is suggested that the "failure to work" qualification, which is virtually inoperative, should be abolished.

Seven members of the majority append reservations; five of the seven favor an increase in the amount of the pension (to 12s. 6d. or 15s.) and a reduction in the age to 65.

Seven members of the committee present a minority report, concurring in the increase of the rate of pension to 10s. (one of the seven recommends 12s. 6d.), and in certain other proposals of the majority, but not in the abolition of the means limit. They recommend, however, that the means limit should be doubled, i. e., that it should be £42 a year for a full pension, and £63 a year for any pension at all.

Accident Insurance Law of France Amended to Include Occupational Diseases.¹

THE accident insurance law of France was amended by the law of October 25, 1919, so as to include occupational diseases.

The occupational diseases covered by the law are specifically mentioned in an annexed schedule. Such diseases may be either acute or chronic but must result from regular occupation in any of

¹ Journal Officiel de la République Française, Paris, Oct. 27, 1919 p. 11973.

the industries named. This list is subject to revision by subsequent legislation.

The employer is responsible for sickness of this class occurring within a period of one year from the date on which the employee quits work. That responsibility, however, diminishes in proportion to the length of time intervening between the date of quitting service and the date when sickness results in incapacity to labor. If during this period the incapacitated person has other employment, in the same class of establishment, the last employer becomes jointly responsible for a portion of the compensation provided for by the original act.

If, by reason of the inexcusable fault of either of the employers, the health of an employee is affected, the employer at fault may be held for an increased proportion of the compensation payable. The last employer is responsible for the payment of the entire compensation, having recourse against the former employers for recovery of the portion due from them.

Employers, making a declaration that in their processes of manufacture they no longer employ substances causing any of the industrial diseases mentioned in this law, are subject to its provisions only in cases where disability occurs within one year from the date of such declaration. Making false declarations is a penal offense.

A person incapacitated by such sickness and demanding compensation must notify the mayor of the commune within 15 days from the date such incapacity begins.

The scope of the national accident fund (law of July 11, 1868) is extended to include sickness and death due to occupational diseases. Insurance rates are to be promulgated within six months and must be sufficient to cover the risks without the necessity of drawing upon the subsidy mentioned in the original act.

Employers becoming liable to compensation may relieve themselves of their liability by depositing the capitalized value of the pensions awarded with the national retirement fund (*caisse National des Retraites*), which for this purpose shall prepare present-value tables based upon the mortality of victims of occupational diseases and of their survivors. Until such tables have been prepared the capitalized value of pensions shall be determined in accordance with tables in use for Government pensions in pursuance of the law of July 20, 1886.

Public administrative regulations shall determine the conditions under which guaranty and insurance companies may insure employers against the risks covered by the present law.

It is a violation of law for any person whatever, by threats, gift, promise of money, payment of medical charges or for medicine, to

entice or attempt to entice any person suffering from industrial diseases to any clinic, physician, or pharmacy against the will of the sick person. The latter has the right to designate the physician or druggist he wishes to be employed.

The following industrial diseases and industries are specifically mentioned as being covered by the amended act:

Class 1.—Lead and its compounds.

Disability due to lead colic, articular rheumatism, extensor paralysis, hysteria, nephritis, gout.

Industries: 1. Lead smelting and refining; 2. Casting, rolling, and adjusting of lead or its alloys; 3. Manufacture of type from lead alloys; 4. Manufacture of tin vessels with lead alloys; 5. Soldering with lead alloys; 6. Operating typesetting machines which use lead alloys; 7. Plating with lead alloys; 8. Casting toys made of lead alloys; 9. Manufacture of tin-foil caps for bottles, using lead alloys; 10. Melting old cans; 11. Handling lead type; 12. Manufacture of lead compounds (white lead, minium, litharge, chromate of lead, etc.); 13. Color mixing, lead base; 14. Painting with lead colors; 15. Manufacture of lead accumulators; 16. Manufacture of drying compounds and lead varnishes; 17. Manufacture of pottery and stoneware having a lead enamel; 18. Decorating porcelain with lead compounds; 19. Enameling of metals with lead enamel; 20. Varnishing or lacquering with lead products; 21. Dyeing with lead colors; 22. Glass polishing with pewter.

Class 2.—Mercurial poisoning.

Sickness: Mercurial stomatitis, mercurial palsy, nutritive disorders due to mercurial poisoning, mercurial cachexy, mercurial paralysis.

Industries: 1. Distillation of mercury; 2. Manufacture of incandescent lamps and radiographic ampulla with the aid of mercury tubes; 3. Manufacture of mercurial barometers, manometers, and thermometers; 4. Gilding, silver plating, and mercurial plating; 5. Manufacture of salts of mercury (azotete, chlorurets, cyanure, etc.); 6. Carotting of furs; 7. Furrier, employing mercury; 8. Bronzing and damaskeening with salts of mercury; 9. Taxidermy, employing salts of mercury; 10. Manufacture of gun primings with fulminates of mercury.

Social Insurance in Portugal.¹

BY decrees Nos. 5636 to 5639, inclusive, the Republic of Portugal recently inaugurated the policy of compulsory insurance covering sickness, invalidity, old age, and industrial accidents.

Sickness insurance.—The first of these decrees relates to sickness insurance. Insurance is obligatory for all persons 15 to 75 years of age engaged in any honorable occupation, whose annual income or

¹ Boletim da Previdência Social. Ano II, No. 7, Outubro a Maio de 1919. Lisbon.

earnings does not exceed 900 escudos.¹ All such persons are required to become members of a compulsory mutual insurance association by the payment of a weekly or monthly premium. The employer is authorized to deduct such dues from the wages of the employee and make regular payment into the fund.

As a temporary measure members are divided into three classes, paying 0.50, 0.40, and 0.30 escudos, respectively, as monthly premiums.

Benefits vary with the class in which insured, and continue for one year, divided into four periods, as follows:

AMOUNT OF DAILY COMPENSATION PAYABLE, BY CLASS AND BY PERIOD.

Class.	Period.			
	First 30 days.	Second 30 days.	Third 30 days.	Last 275 days.
	<i>Escudos.</i>	<i>Escudos.</i>	<i>Escudos.</i>	<i>Escudos.</i>
Class No. 1.....	0.30	0.22	0.14	0.10
Class No. 2.....	.24	.18	.12	.08
Class No. 3.....	.16	.12	.08	.04

The scale of compensation is subject to revision every second year.

Membership for six months entitles any member, in addition to the pecuniary benefits, to baths and open-air treatment; and for two years to certain death benefits, etc., payable to his survivors. After three months' membership the insured and his wife and children under 14 years of age are entitled to free clinical service and medicine.

Persons whose annual earnings, wages, or income exceed 900 escudos are required to pay a premium as follows: From 900 to 1,850 escudos, 0.50 escudo; from 1,850 to 3,800 escudos, 1 escudo; from 3,800 to 5,000 escudos, 2 escudos; over 5,000 escudos, 3 escudos.

A mutual insurance association must be established in each municipality. In municipalities where a mutual sick benefit association is in operation it must, within 60 days from the date of the decree, reorganize on the basis of a compulsory insurance association. In Lisbon and Porto six mutual associations shall be established in each ward.

Invalidity and old-age insurance.—Insurance against invalidity and old age, and for compensation to survivors is compulsory for all persons earning less than 900 escudos, with the exception of the following classes: Public officials entitled to pensions; soldiers employed as laborers; infirm persons incapable of earning one-third average

¹ Owing to fluctuations in exchange value no attempt is made in this article to make conversions into United States money. The normal value of the escudo is \$1.08.

wages and entitled to free subsistence; wage earners, employees, and establishments already insured.

Invalidity is defined as absolute inability, due to natural causes, to perform any work.

The municipal officials of each parish shall cause a census to be taken of all classes of employees between the ages of 15 and 65 years.

The insurance is under State supervision, under the direction of the Institute of Compulsory Social Insurance. The insured is entitled to a deferred annuity, and a pension is provided for the surviving widow and for orphans.

The fund is constituted (1) by a 6 per cent assessment on all salaries or wages up to 900 escudos, payable by the employer, (2) by a like assessment of $1\frac{1}{2}$ per cent payable by the employee, and (3) by an annual subsidy by the State of 13.33 escudos for each soldier recruited. Payments are made by special stamps placed in the book held by the insured. The proportion of funds payable by employers, employees, and the State is subject to revision every second year.

In case of invalidity the annuity varies with the number of premiums paid into the fund: (1) Payment of 235 weekly premiums (47 payments per year for five years) entitles the insured to a pension equal to one-sixth of the total deferred annuity which may be acquired under the law; (2) payment of 470 weekly premiums (from 6 to 10 years, inclusive), to a pension equal to one-third of full annuity; (3) of 705 weekly premiums (from 11 to 15 years, inclusive), to one-half of full annuity; (4) of 940 weekly premiums (16 to 20 years, inclusive), to two-thirds of full annuity; (5) of 1,175 weekly premiums (21 to 25 years, inclusive), to five-sixths of full annuity; and (6) of 1,410 premiums (after 30 years) to full annuity.

The full old-age annuity becomes payable when the insured reaches 70 years of age, provided the full 1,410 premiums have been paid.

A transitory period of 25 years is established, in order to provide for those whose age at the time old-age insurance is effected does not permit them to make the full number (1,410) of weekly payments. Those who are 45 years of age at the time the fund is instituted will receive 75 per cent of the full annuity, those over 50 years of age 50 per cent, and those over 60, 25 per cent.

Annuities for dependents may be provided for by the payment of 1 per cent of the earnings of the person insured, and are graduated in amount according to the number of years of membership of the insured and amount of premium paid.

The children of deceased insured persons not entitled to old-age or invalidity pensions but who have paid the required premiums, shall be paid 10 escudos per month for the six months following the death

of the insured. In case a widow is left without children she is to receive 50 escudos, payable in five monthly installments. Where there is neither widow nor children, ascendants are to be paid 60 escudos.

Any mutual aid association in existence which provides pensions for inability to labor may become associated with the Social Insurance Institute by transferring its invalidity, old-age, and widows' and orphans' funds to the institute.

All mutual sickness funds, parish councils, and labor associations are required to aid the institute in its supervision, for the purpose of carrying into effect the provisions of this decree.

Industrial accident insurance.—Industrial accident insurance is compulsory for every person employed by another in any branch of labor, either mental or physical. Every employer is required to insure his salaried employees and wage earners. The benefits consist of free medical attendance, medicine, and the pecuniary compensation.

Industrial accidents include injuries due to accident, functional disturbances, and industrial poisoning arising in the course of the employment and sickness proven to be due to the employment.

The establishment, employer, State, and administrative corporations (municipalities) are respectively responsible to their employees for the payment of compensation for industrial accidents. These may transfer their individual responsibility to mutual associations, recognized insurance companies, or the compulsory sickness insurance fund.

Each municipality must establish one or more mutual employers' or mixed accident insurance associations for the sole purpose of effecting this insurance and maintain a register of all employers, wage earners, salaried persons, etc.

The pecuniary compensation provided for is as follows: For death, 20 per cent of the annual earnings of the deceased to the widow, so long as she remains such, 15 to 60 per cent to the children (boys under 14, girls under 16), according to the number, and there being no children, 10 per cent to each of the dependent ascendants, but not to exceed 40 per cent in all; for disability—(a) permanent total, 66 $\frac{2}{3}$ per cent of annual earnings, (b) permanent partial, 50 per cent of wage loss, (c) temporary total, during disability, 66 $\frac{2}{3}$ per cent of earnings, (d) temporary partial, 50 per cent of wage loss.

Compensation is computed on full annual earnings up to 900 escudos plus one-half of earnings in excess of that sum.

The cost of the insurance is to be borne by the employer, deductions for this purpose from employees' earnings being prohibited.

Every employer who fails to insure as provided for must deposit with the Minister of Labor cash, a mortgage, guarantee, or bond in a sum equivalent to the reserve required to comply with this decree.

Insurance Institute.—A Compulsory Social Insurance and General Provident Institute is established for the supervision of all classes of compulsory insurance.

LABOR DEPARTMENTS.

Proposed Organization of New York State Department of Labor.

IMPRESSED with the necessity for simplifying the government of the State of New York, the governor appointed, in January, 1919, a nonpartisan reconstruction commission to make a report on retrenchment and reorganization in the State government. This commission has issued a summary, which is part one of its complete report.¹

In prosecuting its inquiry the commission found that in nearly every State public attention has been forcibly drawn to the necessity of reducing expenditures or at least of holding them to the lowest point consistent with the proper discharge of public functions and fair conditions of employment.

The commission also found that the movement for economy and efficiency has passed beyond the stage of protest and discussion. Between 1911 and 1917 (when the movement was temporarily checked by the war) a number of States instituted commissions of inquiry for the purpose of discovering more business-like methods in State administration. All of these commissions are substantially agreed that economy and responsible government can only result from:

1. The consolidation of offices, boards, and commissions into a few great departments of government, each of which is responsible for the conduct of a particular major function such as finance, health, welfare, or public works.
2. Vesting the power of appointment and removal of department heads in the governor; making him in fact, as well as in theory, the responsible chief executive of the State. There is a difference of opinion as to the desirability of confirmation of the governor's nominations by the senate.
3. A consolidated budget system with accounting control over spending officers.

Thirty-eight States have enacted legislation providing for a consolidated budget system with varying provisions as to methods of preparation, legislative review, and enactment into law. Half of these States have placed upon the governor the responsibility for initiating the budget.

¹ Summary of Report of Reconstruction Commission to Governor Alfred E. Smith on Retrenchment and Reorganization in the State Government, Oct. 10, 1919. Albany, N. Y., 1919. 44 pp.

The State government of New York, it is proposed, shall be re-organized with the following departments: Executive department; department of audit and control; department of taxation and finance; department of attorney general; department of state; department of public works; department of conservation; department of agriculture and markets; department of labor; department of education; department of health; departments of mental hygiene, charities, and correction; public service commissions; departments of banking and insurance; department of civil service; department of military and naval affairs.

Proposed Organization of a Department of Labor.

The commission proposes that a department of labor shall be organized as follows:

1. Place at the head of the department of labor an industrial commission consisting of five members appointed by the governor, with the advice and consent of the senate, for terms of five years.

2. The industrial commission will appoint a director of labor, who shall be the administrative head of the department and serve during good behavior.

3. The commission will also appoint a secretary, who will prepare the calendar for the commission, do the general administrative and secretarial work of the commission and serve as secretary to the industrial council.

4. The present counsel and his assistants will be transferred to the attorney general's office if the attorney general is made appointive.

5. The industrial council will be reorganized under a chairman who by specific provision may not be a member of the commission and will establish in the important industries of the State representative subcouncils of employers and employees for the discussion and action upon common problems of industry and for consultation by the commission and the industrial council. The 10 members of the council will be appointed by the governor for terms of five years, two terms ending each year. The chairman will continue to be chosen by vote of the members of the council and will hold office at the pleasure of the council.

6. The department will be organized with a staff and seven bureaus, as follows: Industrial staff; bureau of administration; bureau of employment; bureau of statistics and information; bureau of inspection; bureau of mediation and arbitration; bureau of workmen's compensation; bureau of the State insurance fund.

The head of the bureau of administration will be the secretary of the department.

The head of the industrial staff will be the chief of the industrial staff.

The head of the bureau of employment will be the chief of the bureau of employment.

The head of the bureau of statistics will be the chief statistician.

The head of the bureau of inspection will be the chief of the bureau of inspection.

The head of the bureau of mediation and arbitration will be the chief of the bureau of mediation and arbitration.

The head of the bureau of workmen's compensation will be the chief of the bureau of workmen's compensation. His deputies will be known as deputy commissioners of compensation.

The head of the bureau of the State insurance fund will be the manager of the State insurance fund.

The heads of all these bureaus will be in the competitive class under civil service excepting the secretary.

7. The duties of the present bureau of industries and immigration with reference to the education of aliens, will be transferred to the department of education. The other functions of the bureau will be transferred to the State and local health and police departments.

8. The present division of industrial hygiene in the bureau of inspection will be combined with the bureau of industrial code and the bureau of women in industry in a single industrial staff.

9. In connection with the development of the bureau of employment a bill will be passed providing that all private employment agencies in the State shall be licensed and shall pay a fee of \$250. The industrial commission will license everywhere in first and second class cities. Half the fees of such cities and all of the fees elsewhere will go to the State industrial commission for the support of the bureau of employment.

The bureau of employment will develop a program including the following subjects:

(1) The organization of the labor market to bring about extensive dovetailing of winter and summer trades and to stimulate the use of subsidiary trades.

(2) Directing labor to new occupations when changes of industrial structure result in displacement from chosen occupations.

(3) Reserving certain places in industry for older men and women and leaving the younger generation the task of finding and forcing fresh openings for themselves.

(4) Concentrating attention upon the need for industrial training, including "vestibule" or preliminary training, where such training does not lead to "blind-alley" employment, training in plants to increase efficiency while gainfully employed, and training in trade and business schools. This should be done with the State and local departments of education and with private educational institutions.

(5) Directing boys and girls away from "blind-alley" employment.

(6) Testing periodically and comprehensively the amount of unemployment. This should be done by the bureau of employment in cooperation with the bureau of statistics and information.

(7) In cases of seasonal employment or depression urging employers to shorten hours rather than discharge employees.

10. The bureau of statistics and information will cooperate with the bureau of employment in the issuance of employment statistics covering the largest possible number of employees and in the preparation of statistics on wages and the cost of living. The funds of the bureau of statistics for this and other purposes will be increased and statistical field agents will be provided.

11. The bureau of mediation and arbitration will take a larger part in settling industrial disputes. It will be organized under a chief who will have a panel of 20 representative citizens who will act as mediators and arbitrators when called upon, and such assistants as are required to make investigations and gather statistics.

12. The work of the bureau of workmen's compensation will be so arranged as to limit drastically the number of reviews by and appeals to the commission. A careful codification will be made of the decisions of this bureau. A medical social-service staff will be created in this bureau to follow up cases.

13. The State insurance fund will be placed in a bureau separate from the bureau of workmen's compensation and immediately under the director. An annual audit of the fund will be made by the superintendent of State insurance.

14. If a minimum wage or health insurance legislation is passed, the administration will be provided for in new bureaus under the director of labor and not in independent new departments.

15. The above recommendations will require only statutory changes.

STRIKES AND LOCKOUTS.

“Vacations” in the Printing Industry in New York City.

By A. J. PORTENAR.

THE recent trouble in the printing industry in New York City was a strike in the sense that a large number of workmen quit work at the same time for the accomplishment of a common purpose, yet it was never officially authorized nor officially acknowledged as a strike by either the local unions involved or by their internationals. There was, however, an essential difference in the respective attitudes of the locals and internationals, in that the locals in fact, though unofficially, supported the strike; while the internationals opposed it and eventually compelled the return of the men to work. Demands for an increase of \$14 per week and the establishment of the 44-hour week were the inciting causes of the outbreak, but before it was ended another issue had been injected—namely, the supremacy of international authority—and this latter issue finally became the more important of the two.

The workers in the printing industry are organized into five craft unions, each headed by an international, which is the parent body and issues its charters to subordinate unions located in various printing centers. These five are the International Typographical Union, which embraces all composing room employees; International Printing Pressmen and Assistants' Union; International Stereotypers and Electrotypers' Union; International Photo-Engravers' Union; International Brotherhood of Bookbinders.

These international unions, while each reserves complete autonomy within its craft, have been organized into an alliance known as the International Allied Printing Trades Association. The subordinate local unions are organized into the Allied Printing Trades Councils in their localities. The local unions are responsible to their respective internationals; the local councils are responsible to the International Printing Trades Association.

Among other purposes, the internationals allied in the association have mutually agreed that, in the event of a secession by locals of any one of them, they will support each other in suppressing the secession. The following excerpt from the agreement illuminates this point:

That when any union or members or group of members subordinate to any one of the five international unions making up the International Allied Printing Trades Association secede from the parent organization, the five international unions will join in a general movement against the seceders, and to the end that the supremacy and authority of the international organizations affected may be clearly and permanently established, the five international unions pledge their moral and financial support. In other words, and in a more concise form of expression, the five international unions of the printing trade, namely, the International Typographical Union, the International Printing Pressmen and Assistants' Union, the International Brotherhood of Bookbinders, the International Stereotypers and Electrotypers' Union and the International Photo-Engravers' Union, propose to stand firmly together in the protection of the jurisdiction rights of each one of the international organizations, and to that end pledge their united treasures to the success and permanency of the principles herein enunciated.

Early in 1919 most of the craft unions in the printing industry in New York City agreed to make a united demand for a flat increase of \$14 a week and the establishment of a 44-hour week, to become effective October 1, 1919. The unions not participating in this movement were Electrotypers' Union No. 100 and Stereotypers' Union No. 1, which for some time have had the 44-hour week, and Photo-Engravers' Union No. 1, which will get it on January 1, 1920. The following are the unions which entered into this agreement to present these uniform demands, and their minimum scales at that time were:

Typographical Union No. 6, \$36.

Printing Pressmen's Union No. 51, scales which varied from \$31 to \$46.

Franklin Union No. 23 (cylinder press feeders), \$30.

Job Press Feeders' Union No. 1, \$22.

Mailers' Union No. 6, \$28. (The mailers have local autonomy, but are subordinate to the International Typographical Union.)

Bookbinders' Unions Nos. 1, 6, 11, and 22, an average of \$36.

Bookbinders' Union No. 43 (female), \$18.50 to \$22.

Paper Cutters' Union No. 119, \$36. (Paper cutters are subordinate to the International Brotherhood of Bookbinders.)

Paper Rulers No. 9, \$36. (Paper rulers are subordinate to the International Brotherhood of Bookbinders.)

The officials of each of these unions, upon making this agreement to present uniform demands, stated that their contracts terminated not later than September 30, 1919. Therefore all of them were presumably in a position to enforce these demands without breach of contract.

Before this agreement had been made Pressmen's Union No. 51, Franklin Union No. 23, and Job Press Feeders' No. 1, all of them subordinate to the International Printing Pressmen's and Assistants' Union, had been drifting toward a break with the parent body. They charged that there had been misappropriation of funds by the international officers, and there was also much dissatisfaction with the law governing the referendum. These local unions, together with locals of the same craft in other cities, had previously started a proceeding for an accounting. The locals in New York City had declined to pay their per capita tax, depositing it with a trust company pending a decision of the lawsuit. Under the laws of the International Printing Pressmen and Assistants' Union any local which fails to pay per capita tax is automatically suspended at the end of three months. The International Printing Pressmen's Union naturally held that the deposit of the money elsewhere did not constitute payment, and notified the delinquent locals that the penalty of expulsion would be enforced when the three months' period had ended.

This condition was known to all the other locals in the industry, but at that time it did not seem to be regarded as an obstacle to the united action proposed. The demands were made known to the employers on April 14, and the pressmen's unions took part in all conferences without objection from anyone at that time.

Immediately after the presentation of these demands there was held in Chicago, on April 21, a meeting of what is known as the Joint International Conference Council, which is a newly created body composed of representatives from the employers' organizations on the one side and the five international presidents on the other. The employer delegates from New York brought to the attention of the conference the demands of the local New York unions. The outcome of this conference was a proposition that the 44-hour week be established throughout the industry on May 1, 1921, and that each of the representatives at the conference would go back to his organization and ask for the ratification of that agreement.

The convention of employers thereafter ratified the agreement. On May 28 a referendum vote was taken throughout the jurisdiction of the International Typographical Union on the question, Shall the 44-hour week become effective May 1, 1921? Typographical Union No. 6 of New York City voted "No" by a vote of 5,656 against and 618 for, but in spite of this heavily adverse vote, the proposition was carried throughout the country by a majority of 12,470. The pressmen's International Union also held a referendum vote which ratified the proposal by more than a two-thirds majority.

Regardless of these referendum votes, the local New York unions continued to press their demands for \$14 increase and a 44-hour week, effective October 1, 1919. All of the unions previously mentioned continued to act in concert, including the unions of pressmen, cylinder feeders, and job press feeders, which were now approaching the time when their expulsion would automatically ensue because of their refusal to pay per capita tax to their international. Some time in June a conference was held in the office of Typographical Union No. 6 between the international and local officials. Later conflicting reports were made to the membership explaining what had happened at that conference. President Marsden G. Scott, of the International Typographical Union, declared in a circular letter issued on September 25 that he had emphatically stated at that conference that Typographical Union No. 6 would not be permitted to press the demand for the 44-hour week in view of the action of the referendum. President Leon Rouse of Typographical Union No. 6 was equally emphatic in saying that Mr. Scott had refused to commit himself in any way at that time. The officials of Typographical Union No. 6 based their contention that they had a right to press for the 44-hour week on the authority of a resolution adopted by the Scranton convention (1917):

Whereas, The International Typographical Union was responsible for the eight-hour day in the printing industry; and

Whereas, the Saturday half-holiday in the book and job offices throughout the international jurisdiction has become an established feature, necessitating three-quarter hours overtime five days per week to make up for same; Therefore be it

Resolved, That it is the sense of the International Typographical Union that a week's work in the book and job trade should consist of 44 hours of eight hours the first five days and four hours on Saturday; and, be it further

Resolved, That subordinate unions be instructed to negotiate scales in the book and job offices under above provisions whenever practical.

The international officers held that the referendum vote fixing May 1, 1921, as the time for establishing the 44-hour week was binding on all the membership.

On July 1 the situation became complicated by the expulsion of Franklin Union, No. 23 (cylinder feeders), for nonpayment of per capita tax.

On August 2 Pressmen's Union No. 51 and Job Press Feeders No. 1 were also expelled for the same reason. Nevertheless these unions continued to take part in conferences held with the local association of employers until some time in September. At that time the employers' conference committee gave notice that they would no longer confer with any organization not affiliated with its international and with the American Federation of Labor. The so-called "outlaw"

unions then withdrew, with the understanding that their interests would be cared for by President Rouse, of Typographical Union No. 6.

Conferences continued through August and September without any definite result until early in September. Bookbinders' Unions Nos. 1, 6, and 43; Paper Cutters No. 119; Paper Rulers No. 9; and Mailers No. 6 declared at a conference between the employers and the unions that they were mistaken in their previous statements to the effect that they had no contracts outstanding beyond September 30; that in fact they had arbitration agreements which extended beyond that date. Therefore they would accept the increase of \$6 which had previously been offered by the employers and would agree to the postponement of the 44-hour week until May 1, 1921. They qualified this, however, by saying that if better terms were obtained by any other union, then such terms were automatically to be extended to them.

As soon as the three pressroom unions had been declared "outlawed" by their international the formation of new Nos. 51, 23, and 1 was begun. A small minority of the membership of those unions had remained loyal to the international, and these formed the nucleus for the new organizations. For a considerable time there were few accretions to these new unions.

On September 5 there were two pressmen working in the pressroom of the Publishers' Printing Co. who carried cards in the new No. 51. The remainder of the pressroom force were members of the outlawed unions. The officers of the old union demanded that these two men be discharged. The demand was refused and nearly the whole force, with the exception of these two men, quit work immediately.

On September 30 there was posted in the pressrooms of all the members of the Printers League and the Typothetae (closed shop division) the following notice: "On and after October first, only pressmen and feeder members of the international will be employed in this office."

The posting of this notice meant a lockout in the pressrooms of the organized commercial job shops of New York City, for practically their entire working forces were members of the unions which had seceded from their international, the act of secession being the refusal to pay per capita tax, with their consequent expulsion. The morning of October 1 therefore found the pressrooms deserted, but the composing-room forces working. All the other unions had either not been involved originally or had withdrawn from the controversy as above stated.

There can be no question that the sympathies of both the officers and the rank and file of Typographical Union No. 6 were with the "outlawed" unions. These men had in many cases been working together for years. In addition, they were still animated by the common purpose to secure the 44-hour week immediately. The officers of No. 6 declared that they would do nothing which would imperil their regular standing inside of their international, but at the same time showed no inclination to modify their demands in any particular, but no order to quit work on October 1 in support of these demands was officially given, and there is no evidence to show that such an order was unofficially promulgated.

On the morning of October 1, 139 men working in the composing room of the Technical Press were laid off without notice, on the ground that there was no work for them. On the same morning three men were laid off in the Carey Press on the same ground, but the members of the union working in that shop declared that those laid off had all been prominent in agitating for the wage increase and shorter work week. Be that as it may, this body of about 150 men immediately divided itself into committees of three or four to notify the members working in all the other shops of what had happened and to ask them to quit work. This they could not do as strikers, for none of the procedures laid down by law previous to the declaration of a strike had been complied with. Meetings were held in the various shops, with the result that individual "vacations" immediately became extremely popular. Before night 1,000 men had gone on vacation, and before the week had ended the number was about 3,800. Thus, on October 6 there were on the street about 2,500 members of Pressmen's Union No. 51, 2,500 members of Franklin No. 23 (feeders), and about 500 members of Job Press Feeders No. 1. These had all been locked out by the employers. Also, there were approximately 3,800 members of Typographical Union No. 6 "on vacation."

A meeting of Typographical Union No. 6 was held on October 5, at which the executive committee recommended the passage of a resolution ordering the vacationists back to work. The president told them the resolution must be passed, so that no charge of violating international law relating to strikes could be made against the unions. The resolution was adopted, but it was plain that neither officers nor members had the slightest intention of living up to it. An unofficial organization was formed among the "vacationists," called the 44-50 Club, which in a measure performed the usual duties of a strike committee.

Throughout October conferences were held with the employers which were utterly barren of result. The employers renewed their offer of a \$6 advance and expressed a willingness to arbitrate the whole question. Typographical Union No. 6 refused both of these offers. The pressroom unions could not enter the conferences, because the employers refused to recognize them. The unions held frequent meetings which were very largely attended, but which resulted only in the adoption of dilatory motions expressing confidence in the officers and directing them to seek further conferences with the employers. So the whole month of October passed without any particular change in the situation, both parties refusing to recede in the slightest degree from the positions they had taken.

During that month the question of support for the men on the street became extremely urgent. The pressroom unions expended all the funds they had for the maintenance of their members. Typographical Union No. 6 could not legally levy an assessment for strike purposes. They overcame the difficulty by sending to the referendum a proposition for a 10 per cent assessment for the benefit of the "unemployed." This proposition could hardly fail of adoption, because the "unemployed" made up an actual majority of the membership. It was carried with slight opposition. The proceeds of this assessment, however, were entirely insufficient to pay the benefit of \$12 a week which had been voted, and which was increased to \$15 the following week, and the special funds of the union had to be depleted to support the "vacationists."

One of the most irritating features of the whole difficulty was that the international officers came to New York, conferred with the employers, issued newspaper statements condemning the "vacations," but did not confer with the officers of the local union nor appear at any of the frequent meetings which were held. This attitude of the international officers created such an intense feeling of resentment that it was an important factor in keeping up the determination of the rank and file to stay out. On November 2 all the officers of the international executive council except the president appeared before Typographical Union No. 6 and urged the men to return to work. Their mission was fruitless.

The issue of wages and hours had by this time become subordinate. The international officers frankly confessed that their object in coming to New York was to beat down secession. The employers knew that even if they could get their compositors back, they would nevertheless be unable to go very far unless they could man their pressrooms; but they believed that if the support of Typographical Union No. 6 was withdrawn from the seceding unions the latter would collapse. As

a matter of fact, the members of the seceding unions were making application in the new pressroom unions in continually increasing numbers throughout October and early November, and that movement would have been greatly accelerated had it not been for the determined attitude of the "vacationists" in Typographical Union No. 6.

The compositors and pressmen on the street knew that the financial resources of their respective organizations were getting very low, but they held out in the belief that the employers also were being subjected to terrific financial strain, and that they might crack first. Everybody knew that a great deal of work was leaving the city, some of it on temporary contracts and some permanently diverted. Employing printers in other cities, notably Cincinnati, made strenuous efforts to grab New York work. The unions were encouraged in their expectations by the fact that a number of employers did actually enter into agreements with them to pay a \$6 advance, work 44 hours, hire members of the outlawed unions, and make a final adjustment of wages and hours whenever an agreement had been reached with the employers' association; but when the attempt was made to carry out these agreements, all the other unions represented in the Allied Printing Trades Council, with the exception of Typographical Union No. 6, refused to work with the seceding pressmen, and refused to do any work for any shop that employed them. Such shops could not get any plates or photo-engravings, could not get any bindery workers or send their work to an outside bindery, or have anything done outside of their composing rooms or pressrooms. Some employers carried out the agreement in spite of this handicap, but most of them who were willing to make such agreements declined to settle trouble in one department if by consequences they invited trouble in another. The situation was that the pressroom unions were being discriminated against more severely than nonunion men by all the unions except Typographical Union No. 6, and No. 6 itself was drifting into a position where it might also become an outlawed union.

On October 29 the employers' conference committee sent a letter to President Rouse of Typographical Union No. 6 renewing the offer of an immediate advance of \$6, all other matters to be submitted to arbitration, an answer to be given not later than November 3, and refusing any further conferences. The purpose of this communication was to compel No. 6 either to accept the arbitration offered or definitely refuse it.

A resolution passed by the Scranton convention of the International Typographical Union (1917) reads:

We recommend that the executive council be instructed to suspend the charter of any union which violates its contract or which refuses fair arbitration in any dispute which may arise under that contract or in the negotiation of a new agreement.

Acceptance would naturally mean the end of the difficulty; refusal would give the international executive council the legal right to intervene.

At a meeting on November 9 Typographical Union No. 6 by a vote of 2,500 to 17 refused arbitration. Shortly thereafter the executive council came to New York and the following letter was sent to Typographical Union No. 6:

NEW YORK, November 22, 1919.

Mr. LEON ROUSE, *President,*

New York Typographical Union No. 6,

DEAR SIR: The executive council of the International Typographical Union has reached the conclusion that the present situation in the printing industry in the jurisdiction of New York Typographical Union No. 6 has reached the point where attempts will be made to inaugurate open-shop or nonunion conditions in some commercial office composing rooms that have previously been union unless some remedy is immediately applied.

The council further says that the position of New York Typographical Union No. 6 in refusing to arbitrate the question of the time the 44-hour week shall go into effect in these offices is contrary to the declared policies of the International Typographical Union, and is a menace to other subordinate unions.

In view of these facts and for the purpose of protecting the interests of New York Typographical Union No. 6, and the International Typographical Union, the executive council directs that New York Typographical Union No. 6 at its meeting to-morrow, November 23, order its members who are taking so-called vacations to return to work in all offices on Monday, November 24, 1919, and that it instruct its officers to accept arbitration as a method of settling any disputes at present in controversy. It then expects that the members will return to work in compliance with the order of the union.

In case New York Typographical Union No. 6 at its meeting on Sunday, November 23, 1919, fails to comply with this order of the executive council, that body will be compelled to take action authorized by section 2, Article X, of the International Typographical Union constitution, which reads as follows:

SECTION 2. Any subordinate union which shall fail to make reports required by law or the executive council, or which shall neglect or refuse to obey any law or legal mandate of the International Typographical Union, or executive council, may be fined or have its charter suspended by the executive council.

At a meeting held on November 23, following the receipt of this letter, the executive committee of the local typographical union recommended the adoption of a resolution in line with the mandate of the international union. Some of the members advocated the repetition of a previous performance—namely, to pass the resolution to return to work, but not to comply with it. After a bitter debate, the resolution was adopted by a divided vote.

The men returned to their work the next morning and the eight weeks "vacation" in the book and job shops of the printing industry of New York City was ended. The pressmen had preceded the compositors back to work in most shops, the certain defeat of their secession movement being plain to them. They accepted the amnesty of-

ferred by their international union, which required only that they surrender their cards in the old unions and take out cards in the new ones, even giving them credit for all dues paid to the outlawed unions.

After the men had returned to work, negotiations for the selection of an arbitrator were begun, and all the issues concerning wages and hours will be submitted to him. The 44-hour week will almost certainly be postponed until May, 1921, but some further increase of wages will probably be added to the flat \$6 already obtained.

Two significant facts have been brought out during the trouble. One is that there exists a considerable group who are ready to renounce their international allegiance upon slight provocation. This fact foreshadows the inevitable struggle for control between the radical and conservative elements throughout the whole body of organized labor. The second is that compulsory arbitration, which is bitterly opposed whenever embodied in proposed legislation, was in this instance imposed by an international union on one of its locals.

Berlin Metal Workers' Strike.¹

THE strike of Berlin metal workers began on September 17, 1919, and by September 30 it was affecting nearly four-fifths of the persons employed in the Berlin metal-working industry, the total on strike being about 100,000. It arose out of the award of August 21 made by the conciliation board appointed to settle a previous strike. This award divided the workers into five wage groups. The rates were to be fixed by a joint commission. The commission failed to come to an agreement, and the workers' representatives who broke off negotiations sent an ultimatum on September 16 to the heads of eight firms threatening to strike if their demands were not granted within 24 hours.

The commission had made 19 partial awards, which failed to satisfy the workers, who thought that the awards meant reduced wages and assignment to lower wage groups. The chairman of the new conciliation board, formed after the break-off of negotiations, published on September 16 a reply to the men's complaints, in which he states:

The award on August 21 provided five classes of wages, payable on first engagement. In addition three service bonuses were to be paid after certain fixed periods of employment. These bonuses were to apply to individual workers in each branch who showed special ability and industry or were em-

¹ From various issues of *Vorwärts*. Berlin, September 13 to October 13, 1919.

played on work dangerous to health, and not, as the Metal Workers' Union asserts, to whole (occupational) groups of workers.

As five classes were to be fixed, it was clearly the task of the commission to place the most highly qualified workers in the first class, the least qualified in the fifth class, and the rest in the three intermediate classes.

The minimum wages so far accorded in the partial awards are almost without exception higher, and in no case lower, than existing minimum wages.

A different account of the dispute, which throws the blame on the employers, was given by a representative of the commission at a general meeting of the Berlin Metal Workers' Union on September 22. He said:

"After four meetings, resulting in 19 partial awards, negotiations were broken off. The employers strongly opposed the commission's ruling that workers who perform severe work dangerous to health should be included in the first category, and refused to give way on this point."

The strike began in small departments of a few firms and spread rapidly. The strikers were vital to the industries, so that lockout measures became necessary. From 500 the number of strikers had risen by September 22 to 5,000; and three days later to 18,000. On September 26 the large Siemens works had to be closed, as the firemen had struck, and 60,000 workers were out of employment. By September 30 the number of firms affected was 125; there were 31,300 men on strike and 72,300 were locked out. Seldom has a strike begun so vaguely as this one. Hitherto definite demands have formed the basis of every dispute. The latest dispute has arisen because it was assumed the employers were trying to bring about a reduction in wages.

The commission of 15, appointed by the Metal Workers' Union to formulate the workers' demands, drafted an agreement which was presented to the employers during the first week in October. By October 9, 40 firms had signed the agreement and work had been resumed, and a week later this number had been doubled. Meanwhile the strike continued to spread in concerns the owners of which refused to come to an agreement. At some works the strikers were replaced by voluntary workers organized as an emergency corps (*technische Nothilfe*); and as a protest the commission of 15, on October 17, ordered a general strike of electrical workers. On the same day, however, a proposal was put forward by the minister of labor and accepted by the employers' association and the Metal Workers' Union. The electrical workers agreed to resume work the same evening. The proposal is as follows:

1. Negotiations for the division of workers into five wage classes are to be undertaken, and worked out in sections before the chairman of the arbitration

court. If an agreement be reached it shall be binding on both parties. If no settlement be reached, the court of arbitration shall give a final decision.

2. The court of arbitration shall consist of 4 neutral members with 3 employers and 3 workers as assessors.

3. The neutral members shall be appointed, after consultation with both parties, by the minister of labor.

4. The award of August 21 shall remain valid. In the fifth wage class the increases shall be raised by sums ranging from 5 to 10 pfennigs, in accordance with the concession already made.

IMMIGRATION.

Immigration in October, 1919.

THE following tables, prepared by the Bureau of Immigration of the Department of Labor, show the total number of immigrant aliens admitted into the United States in each month from January, 1913, to October, 1919, and the numbers admitted in each fiscal year, 1915 to 1919, and in October, 1919, by nationality. The total departures of emigrant aliens in October, 1919, numbered 25,447.

IMMIGRANT ALIENS ADMITTED INTO THE UNITED STATES IN SPECIFIED MONTHS
JANUARY, 1913, TO OCTOBER, 1919.

Month.	1913	1914	1915	1916	1917	1918	1919

PUBLICATIONS RELATING TO LABOR.

Official—United States.

CALIFORNIA.—*Industrial accident commission. Tunnel safety rules, effective December 1, 1919. Sacramento, 1919. 139 pp.*

— *Laws, statutes, etc. Labor laws of California. Prepared by the California State Library. Sacramento, 1919. 261 pp.*

DISTRICT OF COLUMBIA.—*Minimum Wage Board. Wages of women in hotels and restaurants in the District of Columbia. Washington, October 10, 1919. 23 pp. Bulletin No. 3.*

This report is summarized on pages 144 to 148 of this issue of the MONTHLY LABOR REVIEW.

IDAHO.—*Industrial accident board. First annual report from January 1, 1918, to October 31, 1918. Boise, 1918. 24 pp.*

A summary of this report appears on pp. 247 and 248 of this issue of the MONTHLY LABOR REVIEW.

MARYLAND.—*State industrial accident commission. Fourth annual report for the year November 1, 1917, to October 31, 1918, inclusive. Baltimore, 1919. 40 pp.*

This report is summarized on pp. 248 and 249 of this issue of the MONTHLY LABOR REVIEW.

MASSACHUSETTS.—*Bureau of Statistics. Forty-sixth quarterly report on employment in Massachusetts, quarter ending June 30, 1919. Boston, 1919. 20 pp.*

Reports increased activity in all important industries and trades, particularly in the building trades, boot and shoe and textile industries, and in iron and steel manufacturing, and an increase in the demand for labor. The total number of strikes recorded during the quarter was 161, compared with 65 during the preceding quarter. Returns received from 1,129 labor organizations in Massachusetts, representing an aggregate membership of 249,737, give the number of members unemployed for all causes at the close of June, 1919, as 12,637, or 5.1 per cent of the total number, in contrast with 13.4 per cent unemployed at the close of March, 1919.

— *State Board of Conciliation and Arbitration. Annual report for the year ending December 31, 1918. Boston, 1919. 98 pp. Public document No. 40.*

"The chief labor troubles were 163, in which one or both parties were unwilling to abandon hostile action." In such disputes, summarized as cases of mediation, the board sought the parties and proffered its advice, suggestions, and assistance. The board's services were sought in 222 petitions, including 59 for determining as normal the conditions of business concerns having a history of labor troubles, and 163 joint applications for arbitration. Ten of the latter were filed in 1917; three of recent origin are pending. In 39 cases a mutual settlement was effected, 2 applications were withdrawn, the contention having been abandoned, and the remaining 119 resulted in awards covered in the report.

MICHIGAN.—*Department of Labor. Thirty-sixth annual report. 1918. Lansing, 1919. 766 pp.*

Contains reports on inspection of factories, workshops, stores, hotels, restaurants, coal mines, and boats, on Michigan free employment bureaus and private employment agencies, prison and reformatory statistics, and labor laws. In 1918, 15,592 factories and workshops were inspected, as compared with 14,262 for the previous year. The number of women employed in the industries of the State during 1918 was 95,349, an increase of 19,337, or 25.4 per cent, when compared with 1917. The number of children employed was 1,651, being an increase of only 26 over the number for 1917. During the year 51,110 accidents were reported, this being 6,962 less than the number reported for 1917. For the fiscal year ending November, 1918, the work of Michigan free employment bureaus shows an increase of 8,010 placements over the previous year, the totals being respectively 108,463 for 1917, and 116,473 for 1918.

MINNESOTA.—*Department of Labor and Industries. Court decisions, Attorney General's opinions, Department of Labor advice, relative to the Workmen's Compensation Act. St. Paul, September, 1919. 84 pp. Bulletin No. 16.*

MONTANA.—*Industrial Accident Board. Fourth annual report for the 12 months ending June 30, 1919. Helena, 1919. 437 pp.*

A brief digest of this report appears on pages 249 to 251 of this issue of the MONTHLY LABOR REVIEW.

NEW MEXICO.—*State Mine Inspector. Seventh annual report for the year ending October 31, 1918. Albuquerque, 1918. 101 pp.*

The output of coal for the year was 4,037,726 short tons valued at \$9,876,361; the production of coke 607,241 tons valued at \$2,448,494.57. No labor disturbance was reported and the relations between employer and employees are stated to have been amicable. Employment at the mines was as follows: Miners, 3,070; day men in mines, 837; boys in mines, 45; day men on top, 876; boys on top, 45; total employed, 4,837; men employed at coke ovens, 315.

NEW YORK.—*Reconstruction Commission. Summary of report to Governor Alfred E. Smith on Retrenchment and reorganization in the State government. October 10, 1919. Albany, 1919. 44 pp. Charts.*

A digest of the proposed reorganization of the New York department of labor appears on pages 266 to 269 of this number of the MONTHLY LABOR REVIEW.

— *University. State-aided evening vocational schools. Albany, June 15, 1919. 37 pp. Bulletin No. 688.*

The purpose is to define the kinds of evening vocational schools entitled to special aid under the provisions of section 605, article 22 of the education law, as amended by chapter 531, Acts of 1919, to describe the plans of organization and administration which experience seems to show are the most satisfactory, and to indicate to communities the proper procedure required to enable them to secure State aid. The text of the law, effective Aug. 1, 1912, is included.

OHIO. *Department of Health. Health of Ohio coal miners. Abstract of a report by Emery R. Hayhurst. Columbus, 1919. 24 pp. Reprint 1903 (from Ohio Public Health Journal, Feb.-May, incl., 1919).*

Portions of the material used in this report, particularly those relating to mortality, how miners cope with sickness and death hazards, community medical facilities, and general conclusions, appeared in an article by Dr. Hayhurst on Protecting the health of soft-coal miners by prevention of disease, in *Modern Medicine*, July, 1919, and was summarized in the September, 1919, issue of the MONTHLY LABOR REVIEW, pages 291-294. The report also considers working conditions, health hazards by chief occupations, housing conditions and local health administration, and sickness—types and extent.

OREGON. *State Industrial Accident Funds. Report on examination and audit, as of June 30, 1919. Salem, 1919. 4 pp.*

PHILIPPINE ISLANDS. Bureau of Labor. *Labor. Boletín trimestral. Vol. 1, No. 1. Manila, March, 1919. 111 pp.*

The first issue of a quarterly publication of the Bureau of Labor. The chief aim is stated to be "to offer the laborers of these islands a source of general information relative to labor." The publication will also contain articles relative to interisland migration of laborers, of which the bureau has charge and for which the Philippine Legislature has this year appropriated the sum of 350,000 pesos (\$175,000), and other data referring to matters of interest to laborers. This issue contains tables showing the daily wages paid to laborers and carpenters employed by the provincial government in the construction of roads, bridges, and provincial buildings; wages of laborers in agriculture, industry, and commerce during the years 1911 and 1917, statement on strikes in 1919, and other data, part of which is in English. The agricultural laborer received in 1911 an average daily wage of about 0.64 pesos (\$0.32), in a majority of cases including food and in a few, both food and lodging, and in 1917 an average daily wage of about 0.668 pesos (\$0.334), which represented an increase of 0.028 pesos (\$0.014) daily or 4.38 per cent in the six years; while the industrial and commercial Filipino laborer in 1911 earned an average daily wage of about 0.88 pesos (\$0.44), and in 1917 and a great part of 1918, 1.28 pesos (\$0.64), which means an increase of 0.40 pesos (\$0.20) or 45.45 per cent.

A digest of this volume was published in the December, 1919, issue of the MONTHLY LABOR REVIEW, pages 347 and 348.

— *Maternity benefit systems in certain foreign countries, by Henry J. Harris. Washington, 1919. 206 pp. Legal series No. 3. Bureau publication No. 57.*

"Sources of information" are listed at the end of the sections dealing with the various countries (except France and Luxemburg) included in the report, and a bibliography arranged by country is found on pages 195-206.

— *Information and Education Service. Division of public works and construction development. Economics of the construction industry. Washington, 1919. 263 pp. Charts.*

Report of an investigation "of those general economic factors which, taken together, determine the financial success or failure of a prospective investment in improved real estate and which, consequently, investors are in the habit of considering before undertaking the improvement of real estate." The division was organized to "stimulate the interest of the Nation in public and private construction" with a view to the creation of buffer employment for labor during the period of transition of manufacturing interests from war to peace production. As to the stimulation of private construction, it was decided that this should take the form of supplying authentic data to assist the individual investor to judge for himself whether or not it would be profitable for him to build. "The provision of such data meant an investigation of the volume of deferred construction, of the recent course of construction-material prices, of wages in the construction industry, of land values and rents, and of mortgage-loan conditions." The more important findings of the investigation concern the following matters: Deferred construction, recent construction, prices of construction materials, wages in the construction industry, cost of construction, land values and rents, and mortgage loans.

——— Public Health Service. *Health insurance, the medical profession, and public health. Including the results of a study of sickness expectancy.* By B. S. Warren and Edgar Sydenstricker. Washington, 1919. 16 pp. Reprint No. 516 from the Public Health Reports, April 18, 1919, pages 775-789.

The principal points which suggest themselves for the consideration of health insurance, both from the viewpoint of the physician and of the public health official, according to the authors, are: The sickness expectancy, i. e., the amount of sickness for which medical and surgical service must be provided; Methods of providing adequate medical and surgical relief; and Methods of adequate prevention of sickness. These points are considered in detail, and a scheme of organization outlined which has been suggested as following the general outlines of a plan for coordination approved by the Annual Conference of State and Territorial Health Officers with the Public Health Service, May, 1916. The proposed organization is stated to be about as follows:

1. Make the State commissioner of health an ex officio member of the State health insurance commission.

2. Detail a medical director from the State health department to assist the commission in supervising the administration of the medical benefits and to act as health advisor and director.

3. Detail district medical directors from the State health department to aid in the administration of the medical benefits in their respective districts.

4. Detail from the State health department a sufficient number of local medical officers to act as medical referees and to sign all disability certificates, and to perform such other duties as may be authorized by law or regulation.

Official—Foreign Countries.

AUSTRALIA. *Court of conciliation and arbitration. Commonwealth arbitration reports.* Vol. 12. *A report of cases decided and awards. Including conferences convened by the President or Deputy President during the year 1918.* Melbourne. [1919.] 983 pp.

— (NEW SOUTH WALES). *Board of Trade [Declaration of 8th October, 1919, as to the living wage to be paid to adult male employees, etc.]* Sydney, 1919. 10 pp. Price, 6d. Published in Government Gazette No. 237 of 10th October, 1919.

This cost of living study was made by the New South Wales Board of Trade in order to determine the living wage to be paid to adult male employees in that State. In making the study the Board of Trade followed the principles laid down in a previous study which were: That the determination of the average cost of living should be based upon the average requirements of the lowest paid class of workers; that this in turn should be based upon the average sized family of this class; and that the standard should be sufficiently high to meet the requirements for a normal mode of living.

As a result of the study the Board determined that the average cost of living had increased to £3 17s.¹ per week and accordingly this was fixed as the living wage for adult employees which should be paid in the area studied. The amounts apportioned to different items were as follows:

	£.	s.	d.
Food and groceries-----	1	11	4
Rent-----	--	15	7
Fuel and light-----	--	3	0
Clothing and boots-----	--	14	0
Other items-----	--	13	1
	8	17	0

— — — *Second interim report on the prevalence of miners' phthisis and pneumoconiosis in certain industries. Report upon the constitution and cost of a technical commission of inquiry into miners' phthisis and other diseases affecting miners.* Sydney, 1919. 57 pp.

The first interim report, which was noted in the June, 1919, issue of the MONTHLY LABOR REVIEW, page 358, contained recommendations for the appointment of a technical commission of inquiry for the purpose of conducting an investigation into the prevalence of pneumoconiosis among miners, and pointed out the fact that such an inquiry conducted by independent medical and scientific specialists was alone likely to provide the data upon which a sound judgment upon the matter of the report could be based. The present report contains complete proposals, including an estimate of cost, for the formation of such a commission, which should consist of at least four eminent scientists, besides a radiologist, a zoologist, a physicist, and an efficient corps of assistants.

INDIA.—*Department of Statistics. Index numbers of Indian prices 1861–1918.* Calcutta, 1919. II, 24 pp. Charts. No. 996. Price, As. 18 or 1 s. 3 d.

There was a rise of 125 per cent in the average level of prices as compared with the standard period 1873, the rise being 189 per cent in the articles of import and 99 per cent in those of export. A table which shows the unweighted index numbers of the average prices of the main groups of articles with their subheads in 1918 and for six months of 1919, as compared with 1913, the prewar year which is taken as 100, indicates the average rise during the war period for all articles to be as follows: 1914, 103; 1915, 106; 1916, 129; 1917, 137; 1918, 157; 1919, 190. The greatest rise in 1918 was 150 per cent in the group "metals and coal," and the least 24 per cent in "miscellaneous." In "textiles" the increase was 67 per cent, and in "food and drink" 43 per cent. The general average price for all groups for 1918 increased by 57 per cent, the rise being 147 per cent in articles of import and 29 per cent in those of export. The greatest rise in the first half of 1919 was 102 per cent in the group "food and drink."

— *Prices and wages in India. Thirty-fourth issue.* Calcutta, 1919. V, 278 pp. Charts. No. 971. Price, 2 Rs. or 3 s.

In three parts: Wholesale prices, retail prices, and wages. Regarding wages. returns from some industrial establishments indicate that, except in the paper industry of Bengal and the rice milling industry of Burma, there was a general rise in industrial wages in 1918 as compared with the preceding year, and with the prewar period. The general averages of index numbers computed on the rates of wage earners in different industries during January of each year from 1915 to 1918, as compared with the prewar period (January, 1914), are stated in the following table:

INDEX NUMBERS SHOWING MOVEMENT OF INDUSTRIAL WAGES IN INDIA DURING JANUARY, 1914 TO 1918.

ITALY. *Ministero per l'Industria, il Commercio e il Lavoro. Direzione Generale del Credito, della Cooperazione e delle Assicurazioni private. Atti del Consiglio della Previdenza e delle Assicurazioni sociali. Sessione del 1916. Rome, 1918. 323 pp. Annali del credito e della previdenza, series II, vol. 17. Prima sessione del 1918. Rome, 1919. 202 pp. Annali del credito e della previdenza, series II, vol. 22. Seconda sessione del 1918. Rome, 1919. 234 pp. Annali del credito e della previdenza, series II, vol. 23.*

These three volumes contain the minutes of the session of 1916, and of the first and second sessions of 1918 of the Italian Social Insurance Council. The subjects under discussion at these sessions were the recognition and approval of the by-laws of scholastic and other mutual aid societies, of sickness and old-age insurance funds of railroad employees, of the old-age and invalidity insurance fund of workers in the Sicilian sulphur mines, the regulations for the carrying out of the decree of August 23, 1917, relating to compulsory agricultural accident insurance and the premium rates for this insurance, the new annuity rates proposed by the National Insurance Institute, and the regulations for the auditing of the financial condition and for the liquidation of life insurance companies.

— *Direzione Generale del Credito, della Cooperazione e delle Assicurazioni private. Provvedimenti in materia di economia e di finanza emanati in Italia in seguito alla guerra europea. Parte quinta: dal 1° Gennaio 1917 al 30 Giugno 1917. Rome, 1919. 543 pp. Annali del credito e della cooperazione, series II, vol. 10, part 5. Parte sesta: dal 1° Luglio 1917 al 31 Dicembre 1917. Rome, 1919. 336 pp. Annali del credito e della previdenza, series II, vol. 10, part 6.*

These two volumes form parts 5 and 6 of a compilation, economic and financial, of laws, decrees, etc., enacted in Italy during the European war.

JAPAN. *Bureau of General Statistics. Statistical résumé of the Japanese Empire. 33d year. Tokio, 1919. 185 pp.*

The publication gives general statistics for the Japanese Empire and colonies, among others tables showing wages and earnings of workers in various occupations by sex and by year, 1912 to 1916. It gives a list of life insurance companies, capital invested, number of members, also mutual aid societies for government employees and cooperative societies.

NEW ZEALAND. *Board of Trade. Third annual report. Wellington, 1919. 33 pp. Price, 1s.*

Considers the increases in the cost of living, the efforts at price regulations, the control of trade and industry, and the policies suggested to prevent or control monopolies. It is stated that from July, 1914, to May, 1919, the cost of living increased 42 per cent. In discussing the control of industry in connection with the campaign against rising prices it is stated that the ends to be

achieved by Government control are (a) to keep alive competitive industry, and (b) to control monopoly. It is recommended that, in order to carry out the policies of the board and to control industry effectively, there be established a Department of Industries and Commerce, consisting of "a minister of industries and commerce, a Board of Trade, a secretary of industries and commerce a secretary to the board." It is urged that the board be given power (a) to investigate the organization and business conduct of industry, especially protected industries already in existence; (b) to require annual and special reports from businesses and industries; (c) to investigate and make recommendations, and in suitable cases to enforce recommendations where infringements of the Commercial Trusts Act are alleged; (d) to investigate trade conditions in and with other countries, particularly in regard to the operation of monopolies and trusts; (e) to determine and prevent unfair methods of competition; (f) to bring about improvements in the methods of accounting used by businesses, particularly with respect to accurate and uniform methods of cost accounting; and (g) to investigate and report upon trade associations and control their activities.

ROUMANIA *Diracțiunea Generală a Statisticiei. Anuarul Statistic al României. 1915-1916. Bucharest, 1919. xxx, 343 pp.*

The official statistical yearbook of Roumania for the years 1915 and 1916 containing statistical data on climatology, organization, population, agriculture, means of communication (railroads, navigation, roads, posts, telegraph, and telephone), commerce, industry, stock companies, finance, public instruction, and administration of justice. The data on industry show that at the end of 1915 a total of 53,470 workers, among which were 4,679 female workers, were employed in 837 factories encouraged by the State through grants of special privileges. The annual pay roll of these factories was 49,795,673.60 lei (\$9,610,565). Data on workmen's insurance show that in the fiscal year 1913-14 a total of 217,772 persons were insured. Of this number 193,883 were males and 23,889 females. Medical aid in cases of sickness was given in 385,652 cases to insured persons and in 91,742 cases to members of their families.

SWITZERLAND (ZÜRICH, CANTON). *Statistisches Bureau. Die Ergebnisse der eidg. Berufszählung vom 1. Dezember, 1910, in den politischen Gemeinden des Kantons Zürich. Winterthur, 1919. 59 pp. 3 maps. Statistische Mitteilungen betreffend den Kanton Zürich. Heft 181.*

The results of the Swiss occupational census of December 1, 1910, in so far as they relate to the communes of the Canton Zürich. According to this census the population was distributed among the various occupations as follows:

According to the preceding table the percentage of gainfully employed persons is much larger in the rural communes of the Canton Zürich than its industrial and urban communes. The percentage of gainfully employed females is largest in farming communities and lowest in the large cities. Of the gainfully employed population of the Canton, 55.1 per cent were engaged in industry, 18.3 per cent in farming, and 14.7 per cent in commerce.

— (ZÜRICH, CITY). *Städtisches Arbeitsamt. Geschäftsbericht für das Jahr 1918. Zürich, 1919. 31 pp. Chart.*

The annual report of the municipal labor office of the city of Zürich on the activities of the city's municipal and private employment offices during 1918. The activities of the municipal employment office during the five-year period 1914-1918 are shown in the following table:

STATISTICS OF THE ACTIVITY OF THE MUNICIPAL EMPLOYMENT OFFICE OF ZÜRICH,
1914-1918.

Year.	Vacant situations.			Applicants.			Situations filled.			Transient and non-resident applicants.
	Male.	Female.	Total.	Male.	Female.	Total.	Male.	Female.	Total.	
1914	8,471	2,713	11,184	16,485	2,630	19,115	6,904	1,694	8,598	9,533
1915	10,286	2,096	12,382	14,599	2,891	17,490	7,645	1,538	9,183	3,582
1916	13,008	3,414	16,422	12,524	3,137	15,661	10,252	2,212	12,464	3,073
1917	12,906	3,504	16,410	11,328	2,647	13,975	9,904	2,008	11,912	2,550
1918	13,506	3,123	16,629	13,446	2,287	15,733	11,020	1,673	12,693	2,053

The results for 1918 show an increase of 219 in the number of vacant situations, of 1,708 in the number of applicants, and of 786 in the number of situations filled. The report states that the termination of the war and the conse-

quent changes in the economic situation have exercised a strong influence on the labor market and caused a considerable decrease in the demand for labor, but that Zürich was spared an acute crisis. In addition to the vacant situations shown in the preceding table, 10,537 temporary situations for laundresses, charwomen, and female day laborers were registered and 10,396 of these were filled. According to the data shown in the preceding table the number of male and female applicants per 100 vacant situations was 99.6 and 71.6, respectively, and that of applicants of both sexes 86.1. Of the male applicants, 6,786 were skilled workers, 1,414 agricultural workers, and 5,246 unskilled workers.

The number of private employment offices operating in Zürich in 1918 was 29. Ten of these were free employment offices and the other 19 were operated for profit. The 29 offices combined registered 21,507 vacant situations and 15,773 applicants, and were able to fill 7,412 (34.4 per cent) of the former.

For the year 1918 the municipal employment office received a State subsidy of 14,713 francs (\$2,839.60), a cantonal subsidy of 3,000 francs (\$579), and a subsidy of 750 francs (\$144.75) from the Zürich Cantonal Federation for the employment of unemployed for payment in kind (Naturalverpflegung). In addition, the Central Office of the Swiss Employment Exchanges contributed 2,000 francs (\$386) to the costs of administration.

Unofficial.

AMERICAN ACADEMY OF POLITICAL AND SOCIAL SCIENCE. *The Annals*. Vol. 86, No. 175. *The railroad problem—a discussion of current railway issues*. Philadelphia, November, 1919. 252 pp.

This volume is devoted largely to the current issues as to railway regulation and the participation of labor in the management of railroads. Its four parts contain articles on (1) Government operation, (2) Current proposals for regulation, (3) Unification of terminals, and (4) Railway efficiency and labor. Among the articles of special interest to labor are Women in the railroad world, by Pauline Goldmark; Should labor participate in management, by Glenn E. Plumb; and Railway efficiency and labor, by Captain O. S. Beyer, jr.

AMERICAN FEDERATION OF LABOR. *Study and report upon judicial control over legislatures as to constitutional questions*, by Jackson H. Ralston. Ordered prepared and printed in pamphlet form by St. Paul convention of the A. F. of L. Washington, 1919. 80 pp.

ARNOT, R. PAGE. *Facts from the coal commission*. Compiled by R. Page Arnot (Secretary Labour Research Department), for the Miners' Federation of Great Britain, with a foreword by Robert Smillie and Frank Hodges. London, Labour Research Department, 25 Tothill Street, Westminster, S. W. 1, 1919. 40 pp. Diagram.

Articles containing accounts of the coal commission, including the recommendations of the Sankey report, were published in the May and August, 1919, issues of the MONTHLY LABOR REVIEW, pages 109 to 114 and 78 to 86 respectively.

BARGERON, L. *L'Hygiène dans la Reconstruction des Usines*. Paris, 1919. 275 pp. Illustrated.

A monograph on industrial hygiene. In view of the reconstruction of factories in the devastated regions of northeastern France the author, basing his recommendations on his practical experiences as factory inspector, outlines guiding principles of shop hygiene to be observed in this reconstruction work. He expresses great fear that in the haste of reestablishing production scant consideration will be given to industrial hygiene in the rebuilding and equip-

ment of the factories. The volume is divided into ten chapters dealing with the following subjects: (1) Temperature of the working place; (2) lighting; (3) effects of compressed air; (4) dust; (5) foul and humid air; (6) installations for personal hygiene; (7) spittoons, privies; (8) factories of poisonous substances and explosives; (9) food and drinks; and (10) sports. In addition to laying down principles of industrial hygiene the author describes numerous appliances for the practical carrying out of these principles. The text is copiously illustrated.

CARNEGIE FOUNDATION FOR THE ADVANCEMENT OF TEACHING. *Justice and the poor. A study of the present denial of justice to the poor and of the agencies making more equal their position before the law with particular reference to legal aid work in the United States.* By Reginald Heber Smith. New York, 576 Fifth Avenue, 1919. 271 pp. Charts. Bulletin No. 13.

This bulletin constitutes the second in a series of studies of legal education and cognate matters that is in course of publication by the Carnegie Foundation, under the general charge of Alfred Z. Reed. It sets forth the defects in the administration of the law which work in effect a denial of justice to the poor or the ignorant; and the agencies, supplementary to the existing machinery, whose object is to remedy these defects. "The outcome and the object of the report is the effort to prove that these various agencies, if properly articulated with the existing system of the administration of justice, can be made to secure, so far as human means can do, the practical equality of all men before the law and to afford to all citizens without regard to wealth or rank or race the means for a prompt, inexpensive, and fair adjudication of their complaints."

COLSON, C. *Cours d'economie politique. Livre deuxième. Le travail et les questions ouvrières.* Revised edition. Paris, F. Alcan, 1917. 531 pp.

This book is a course of study in economics and deals with labor problems in a very detailed way. It studies the relation between population and labor productivity; the Malthusian theory; mortality; immigration and its effects on labor standards; and the effect of increased production on wages. It gives a historical survey of various labor organizations; a study of wages, hours, rest periods, apprenticeship, cooperative associations, labor contracts, unions, employers' organizations, strikes, lockouts, minimum wage, etc.

A special chapter is devoted to social insurance. It treats of the theory of insurance, probability and risks, premiums, workmen's compensation and employers' liability, pensions, mutual help associations, State subsidies. It gives the advantages and disadvantages of various systems in different countries, the legal measures taken by different governments with a view toward the health and security of workers, and ends with a discussion on the value of compulsory State insurance. The rest of the book deals with public and private charities, and the means of increasing the welfare of the workers. There is a table of relative increase in wages and cost of living in France, 1810-1910.

COX, HAROLD. *The coal industry. Dangers of nationalization. Second impression.* London, Longmans, Green & Co., 1919. 18 pp.

This pamphlet is based upon evidence given by the author, editor of the Edinburgh Review, before the Coal Commission.

Deutscher Buchbinder-Verband. *Bericht des Vorstandes, 1918.* Berlin, 1919. 75 pp.

The annual report of the directorate of the German Bookbinders' Federation for 1918. With respect to the labor market the report states that in the first 10 months of 1918 the number of unemployed male bookbinders never exceeded 0.6 per cent and that of female workers 1.6 per cent. In November, however,

the respective figures increased to 2 and 2.7 per cent. and in December to 4.5 and 6.5 per cent. The membership increased slightly during the first quarter and decreased during the second quarter by 324, but in the third quarter it increased again by 1,911, and the phenomenal increase of 15,608 is reported for the last quarter of 1918. On June 30, 1914, the federation had 16,413 male and 15,968 female members; that is, both sexes were equally represented. At the end of 1918 the composition of the membership had undergone a very great change, for the male members numbered only 10,591, and the female 26,378. The report points out that this disparity in the membership of the two sexes exercises an unfavorable influence upon the finances of the federation, because the administrative expenditures for female and male members are the same while the membership fees of female members are considerably lower than those of the male members. The total receipts of the federation during 1918 amounted to 675,376.53 marks (\$160,739.61) and the expenditures to 429,664.75 marks (\$102,260.21). With the exception of administrative costs, unemployment benefits with 55,650.60 marks (\$13,244.84) and sick benefits with 81,870.15 marks (\$19,485.10) were the two largest items of the expenditures. The federation is attempting to bring about a national collective agreement (Reichstarifgemeinschaft.)

The report regrets the lack of interest during the war by affiliated national federations in the bookbinders' international secretariat. The German, Austrian, and Hungarian federations were the only contributing federations in 1916, and in 1917 even the Hungarian Federation failed to make contributions. *Deutscher Holzarbeiter-Verband. Jahrbuch, 1915. Berlin, 1919. 352 pp.*

The yearbook for 1915 of the German Woodworkers' Federation. This yearbook deals with the effects of the war on the woodworking industry, the joint industrial league of this industry, the wage movement, the collective agreements in force and newly concluded, the membership movement, the financial report of the federation, monthly unemployment statistics, accident statistics, etc. The data on accident statistics will be discussed in an article in the MONTHLY LABOR REVIEW.

FOERSTER, ROBERT F. *The Italian emigration of our times. Cambridge, Harvard University Press, 1919. 556 pp.*

A study of the Italian emigrant in his varied relations both to Italy and to the countries to which he goes, and of the influences affecting emigration. Four chapters deal with Italian emigration to the United States. Italian immigrants in various skilled and unskilled occupations are discussed, one chapter being devoted to the small share taken by the Italian immigrant in the agriculture of this country. "The Italian Experience" gives information about: Considerations of employment, wages, saving; Housing; Food; The question of health; Attitude of the American employing and laboring classes. A bibliographical index appears on pp. 537-546.

FRANKEL, LEE K., AND DUBLIN, LOUIS I. *Influenza mortality among wage earners and their families. A preliminary statement of results. Reprinted from American Journal of Public Health, Vol. IX, No. 10, October, 1919, pp. 731-742.*

This paper is summarized on pages 223 and 224 of the present issue of the MONTHLY LABOR REVIEW.

GEARHART, EDNA B. *List of references on workshop committees. In Special Libraries, Industrial Number. Boston, Mass., October, 1919. Pp. 203-208.*

Annotated bibliography of books and magazine articles, including references to printed plans in operation. A partial list of firms that have inaugurated

some form of representative shop committee plan was published in the MONTHLY LABOR REVIEW for September, 1919, pp. 123-125.

GIESE, F. *Die Verfassung des Deutschen Reiches vom 11. August, 1919. Berlin, Carl Heymanns, Verlag 1919. 438 pp. Taschen-Gesetzammlung 19.*

The text of the new German constitution with commentaries. A translation of the socio-political provisions of the new constitution was published in the December issue of the MONTHLY LABOR REVIEW (pp. 132 to 135).

HARL, MRS. CHARLES M. *Profit sharing. A solution of the problem between capital and labor as it appears to one who is affiliated with neither. Council Bluffs, Iowa [1919]. 8 pp.*

HONEGGER, HANS. *Godin und das Familistère von Guise. Zürich, 1919. 111 pp. Zürcher Volkswirtschaftliche Studien. New series, No. 6.*

A history of the life of Jean Baptiste André Godin and of his practical life work, the familistère settlement and productive association at Guise (France).

HUTCHINSON, EMILE JOSEPHINE. *Women's wages. A study of the wages of industrial women and measures suggested to increase them. New York, Columbia University, 1919. 179 pp. Studies in history, economics, and public law, vol. 89, No. 1.*

The author analyzes the wage data gathered by various Federal and State agencies and commissions, the effects of minimum wage legislation, trade-unionism, and vocational education upon women's wages, and points out methods which may be expected to result in an improvement in women's industrial status.

INTERNATIONAL ASSOCIATION OF CASUALTY AND SECURITY UNDERWRITERS. *Eternal vigilance is the price of success. Address of the president, Arthur A. Childs, Ninth annual convention, the Greenbrier—the White Hotels, White Sulphur Springs, W. Va., September 16-19, 1919. [N. p., 1919.] 19 pp.*

Two subjects to which considerable attention is given are workmen's compensation insurance and accident and health insurance. Of the first, the total written insurance for 1918 by the 40 stock companies writing compensation insurance was \$94,861,458, which was a gain in premium income of over \$30,000,000. The underwriting profit was only \$197,933. In 1917 on a premium income of \$64,640,671, 32 of the stock companies took an underwriting loss of \$935,712. Thus a decided improvement was reflected for the year. The demand for accident and health insurance during 1918 is called "phenomenal." "Probably the direct and indirect hazards of the war, together with the scare created by the influenza pandemic, were largely responsible for the increase of over nine million in premiums. The total accident and health premium income of 75 stock companies was \$49,696,511. The combined experience on both accident and health insurance showed an underwriting loss of \$748,228. Fortunately for the companies writing these kinds of insurance the accident losses were considerably below normal, notwithstanding the increase in automobile accidents."

JOURNAL OF INDUSTRIAL HYGIENE. Vol. 1, No. 7. New York, Macmillan Co., November, 1919. pp. 369, 120 pp.

An article by Dr. Penteado Bill on The electrostatic method of dust collection as applied to the sanitary analysis of air, which was presented as his thesis for the degree of Doctor of Public Health, gives a very specific analysis of the method with the conclusions that:

"The electrical precipitation method of dust collection in this series showed 62.1 per cent greater average returns than the Palmer water spray sampler, for the same amount of air and under identical conditions.

"The Palmer suspensions can give factitious counts because of agglomeration of particles in aqueous suspension. For this reason the actual number of particles present may be higher than those reported.

"The electrical precipitation apparatus, as used in this study, is far too bulky for ordinary field work, but can be simplified and made portable.

"The method of electrical precipitation has certain advantages over the Palmer, viz:

"(a) Absence of suspending medium.

"(b) Uninterrupted passage of air.

"(c) Facility of determining the percentage of dust present in the air in the sample studied, and the percentage of air dust represented by the weight of total sediment.

"These conclusions seem to warrant further study of electrical precipitation of dust as applied to the sanitary analysis of air."

Other articles are on Flatfoot and its prevention, by Dr. Edward H. Bradford; Report on certain organs in a case of fatal poisoning by arseniuretted hydrogen gas, by Sheridan Delépine; The health hazards and mortality statistics of soft-coal mining in Illinois and Ohio, by Emery R. Hayhurst, whose article on the subject which appeared in *Modern Medicine* for July, 1919, was summarized in the September, 1919, issue of the *Monthly Labor Review*, pages 291 to 294; and Applications of psychiatry to industrial hygiene, by Dr. Stanley Cobb, a digest of which is published in this issue of the *Review*, pages 226 to 229.

LABRY, RAOUL. *L'Industrie Russe et la Révolution. Paris, 1919. 288 pp.*

A review of Russian industry during the revolution based on the author's personal experiences, and on official and unofficial information gathered by him during the revolution while attached to the Institut Français at Petrograd. Following the introduction the author devotes the first chapter to a discussion of the development of the social democratic party and the revolutionary organization of the Russian working class, and in describing the industrial conditions in Russia during the war up to the time of the revolution. Other chapters deal with the industrial policy of the provisional government and of the soviet; industrial Bolshevism and its effect, and industrial conditions in the Ukraine under hetman Skoropadski. The volume contains numerous statistical data on wages, employment, output, prices, etc., and it includes the text of the regulations relating to the control of production, sales, and storage of first materials by the workers and the management and the organization of nationalized establishments; the decree establishing the National Economic Council, and that regulating wages in the metallurgical establishments of Petrograd and its suburbs.

LAUNAY, L. DE. *Problèmes Économiques d'après Guerre. Paris, 1919. 319 pp.*

In this volume the author, a mining expert and member of the Institut de France, discusses the postwar economic problems of France, outlines a reconstruction program, and preaches an economic war against Germany. His reconstruction program covers the following subjects: (1) Industrial organization; (2) supply of raw materials and economic defensive; (3) transportation; (4) labor; and (5) natural resources.

In discussing postwar industrial organization the author condemns collective organization of industry under state control and advocates free association, as the best means of which he recommends the extensive establishment in industry as well as in agriculture of syndicate offices for the purpose of sale, pur-

chase, and scientific research, so-called "comptoirs." Next, he emphasizes the great advantages of scientific shop management, specialization, quantity production of standardized staple articles, economy in the consumption of fuel, and better use of the forces of nature.

With respect to the supply of raw materials he recommends in the first place that by concerted action the Allies should for years to come limit the supply of Germany with foreign raw materials, furnishing her only what she needs for feeding and clothing her own population, pointing out that such a process of starving German industry would prevent Germany from recovering her foreign trade and leave her without means to renew hostilities. He then reviews the facilities for provisioning France with the principal raw materials such as cotton, wool, silk, rubber, oils and fats, iron, copper, tin, nickel, and phosphates.

Under the heading transportation he discusses the tonnage loss of France through German submarine activities and proposes to replace it through extensive shipbuilding, the purchase of tonnage from England and America, continuation of transport agreements with foreign countries having a large merchant marine, development of French ports, and creation of free zones in them. He points out the defects of the French railroad system, and discusses the proposed construction of transversal lines, the progress in railroad construction during the war, the scarcity of rolling stock, the future financial régime of the railroad companies and advocates the speedy construction of the long projected tunnel under the English Channel. He calls attention to the advantages of river and canal transportation over railroad transportation and recommends extension of the net of canals and general improvement of rivers and waterways. Finally he advocates extensive building of good national roads for wagon and automobile traffic under the supervision of a board modeled after the English road board.

As concerns the labor question, the author entirely ignores the social labor problems and limits himself to a discussion of demobilization measures and of the shortage of male labor caused by the great loss of life during the war. As remedies for this shortage he recommends more rational use of male labor, introduction of the Taylor system, increased employment of female labor in occupations usually not filled by women in prewar times but for which war experience has shown them to be suited, and finally greater use of foreign (Italian, Spanish, Polish) and colonial labor (Tunisians, Kabyles, Moroccans, and Chinese).

The last chapter of the volume is devoted to a discussion of fuel problems and of greater exploitation of the forces of nature.

MODERN MEDICINE. Vol. 1, No. 7. Chicago, The Modern Hospital Publishing Co., November, 1919. pp. 549-650.

Under the title of The scope of the physical examination in industry, Dr. C. D. Selby outlines the main points to be observed in such an examination of employees and gives the plan in operation at the Toledo plant of the National Malleable Castings Co. An article by Dr. Charles A. Lauffer on Industrial health hazards considers such hazards under the classification of (1) poisons, dusts, fumes, gases; (2) heat, humidity, ventilation; (3) lighting; (4) crowding; (5) fire peril; (6) association with diseased employees; and considers various remedial measures suggested for dealing with them. Dr. Frankwood E. Williams discusses Nervous and mental disease as a problem in public health, with the conclusion that the importance of such disease in this relation lies "not alone in the number slain, though the number is large; not alone in the number of lives crippled and blasted, though the number is larger; not in the

burden of expense entailed, though it is enough to give any community pause; but in the damage done to social structure by the struggles at adjustment and compromise of individuals ordained to failure—more often than not failure with consequences more than individual—unless protected and safeguarded by a community manifesting a degree of understanding greater than has ever yet been shown. Infections may be eradicated; nervous and mental disease may be largely reduced in number, though it may not be so readily done away with. But the consequences of nervous and mental disease may be eliminated by an intelligent, persistent public health effort."

Other articles of special interest are Health education in industry, by Dr. W. A. Evans; Mercurial poisoning, by Dr. R. P. Albaugh; Malingering—involving the problem of getting sick or injured employees back to work, by Dr. Judson C. Fisher; Columbia University health service, by Dr. William H. McCastline; How Tuskegee Institute is promoting better health conditions in the South; and Industrial clinics in general hospitals, by Dr. D. L. Edsall. An extract from the last article appears on pages 224 and 225 in this issue of the MONTHLY LABOR REVIEW.

MOORE, TOM. *Labor's interest in safety. An address delivered at the fifth annual meeting of the Ontario Safety League. Toronto, 1919. 8 pp.*

MUTO, SANJI. *Employers and workers. The urgent need for universal labor legislation in the matter of sickness, pensions, relief to families of deceased workers, industrial, and moral training, etc. An appeal. Washington, October, 1919. 21 pp.*

This appeal by a Japanese employer of labor on a large scale for many years is intended to call attention to some of the more important measures designed for the furtherance of the relief of employees and operatives and their families, and the improvement of their physical and moral welfare, which have been adopted by several large industrial establishments and Government works in Japan. Its purpose is to point out "the urgency of embodying in universal labor legislation a minimum of relief measures which shall make sufficient provision for the subsistence of workmen and their families in distress from causes beyond their control."

NATIONAL CIVIC FEDERATION. *Laws of France, 1919. Town planning and reparation of damages caused by the events of the war. Translation by Roscoe Pound. New York, Metropolitan Tower, October, 1919. 51 pp.*

Under the town planning law, enacted March 14, 1919, every city in France of 10,000 inhabitants and more is obligated to work out, prior to March 15, 1922, a comprehensive plan covering all matters of municipal development (roads, squares, playgrounds, parks, monuments, public buildings, etc.), inclusive of works and utilities for the convenience and health of the public (waterworks, sewers, etc.).

NATIONAL INDUSTRIAL CONFERENCE BOARD. *Wartime changes in wages. September, 1914–March, 1919. Boston, September, 1919. 128 p. Research report No. 20.*

A digest of this report appears on pages 141 to 144 of this issue of the MONTHLY LABOR REVIEW.

— *Works councils in the United States. Boston, October, 1919. 135 pp. Research report No. 21.*

An account of the operation of works councils in 225 establishments in the United States. A list of industrial concerns having a form of employee representation and a bibliography are appended. A digest of this report appears on pages 191 and 192 of this number of the MONTHLY LABOR REVIEW.

NATIONAL SAFETY COUNCIL. *Safe practices. No. 30. Trucks and wheelbarrows.* Chicago, 168 N. Michigan Avenue. [1919.] 12 pp. Illustrated. Price, 25 cents.

NATIONAL TRANSPORT WORKERS' FEDERATION. *Report of the eighth annual general council, Newcastle-on-Tyne, June 6th and 7th, 1918.* London, 8, St. Martin's Place, Trafalgar Square, W. C. 2. [1918.] 106 pp.

NATIONAL WOMEN'S TRADE-UNION LEAGUE OF AMERICA. *English women in the labor and cooperative movements. Three speeches delivered before the seventh biennial convention of the National Women's Trade-Union League, Philadelphia, June 2-7, 1919.* Chicago, 64 West Randolph Street. 1919. 27 pp.

The speeches are on Women and the labor world, by Margaret Bondfield; women as cooperators, by Mrs. Eleanor Barton; and Women workers of England, by Mary Macarthur.

— *Women in trade-unions in the United States.* Chicago, 64 West Randolph Street. 1919. 15 pp.

A brief outline of the history of the women's trade-union movement in the United States.

NATIONAL WORKMEN'S COMPENSATION SERVICE BUREAU. *Manual classifications code. Workmen's compensation.* Revised April 1, 1919. New York, 1919. 66 pp.

NEW JERSEY STATE CHAMBER OF COMMERCE. *Bureau of State Research. Joint industrial council for New Jersey.* In 'New Jersey.' Vol. VI, No. 10. Newark, July, 1919. Pp. 133-140.

A tentative plan for a joint council developed through the investigations made by the Bureau of State Research, which proved the need for such a council in the State.

— — *Shop committees and industrial councils. Parts I and II.* 'New Jersey,' Section 2, Vol. VI, No. 10. Newark, July, 1919. 63 pp. Consecutive No. 18.

This report, the result of an investigation by the Bureau of State Research, discusses the general need for reorganization and for greater cooperation between the different factors concerned in labor problems and describes the shop committee plans in force in 13 establishments. These plans include examples of all the different types of shop committee systems in force in this country. In the appendixes are given synoptical tables of shop committee systems; plans for the establishment of industrial councils; labor's views on "company unions" and "shop committees," and, under the title of "A new motive in industry," a description of the system at the Rock Island Arsenal and the report of the British building trades. A digest of this report appears on pages 193 and 194 of this number of the MONTHLY LABOR REVIEW.

PICKARD, BERTRAM. *A reasonable revolution. Being a discussion of the State bonus scheme—a proposal for a national minimum income.* London, George Allen and Unwin (Ltd.), 1919. 78 pp.

An amplification of the State bonus idea originally put forward by Dennis Milner in his pamphlet, *Scheme for a State Bonus*. The author, however, states that in some parts of the book the method of presentation is colored by his own personal valuation of the State bonus scheme. The proposals contained in this scheme are summarized in the words of Mr. Milner as follows:

(a) That every individual, all the time, should receive from a central fund some small allowance in money which would be just sufficient to maintain life and liberty if all else failed.

(b) That as every one is to get a share from this central fund, so every one who has any income at all should contribute a share each in proportion to his capacity.

PLUMB PLAN LEAGUE. *Labor's plan for Government ownership and democracy in the operation of the railroads. Based on statements by Glenn E. Plumb before the Interstate Commerce Committee of the United States Senate, with additional material.* Washington, 447-453 Munsey Building, 1919. 32 pp. Pamphlet No. 1.

PORTLAND CEMENT ASSOCIATION. *Accident prevention bulletin.* Vol. 5, No. 6, November-December, 1919. Chicago, 111 West Washington Street, 1919. Pp. 79-150.

This issue contains the proceedings of the cement sectional meeting of the National Safety Council's eighth annual congress held in Cleveland, October 1 to 4, 1919.

PROTESTANT EPISCOPAL CHURCH. *Joint commission on social service. Third triennial report submitted to the General Convention, 1919.* New York, Church Missions House, 1919. 42, 191 pp.

Greatest prominence is given to a consideration of the problem of industrial relations, which is placed foremost among the special problems examined on account of its "urgent and intrinsic importance." The history of social and industrial movements in the United States is traced and analyzed, and the report finds that we are "confronted with a larger issue than we have yet commonly or consciously faced. It revolves about the question of what is or should be after all the proper relation between work, religion, and life."

STEELE, RUFUS. *Aces for industry.* Boston, Houghton Mifflin Company, 1919. 93 pp.

An argument, in the form of a narrative, for the establishment of apprentice schools in industrial plants, the claim being that industrial intelligence, skill, and loyalty could be developed through this means.

WADIA, B. P. *A memorandum on labor problems in India.* London, Victoria House Printing Co. (Ltd.), July, 1919. 12 pp.

The author is president of the Madras Labor Union and fraternal delegate from the first trade-union in India to the British Labor Party and the Parliamentary Committee of the Trades-Union Congress. The exceptional labor conditions in India are explained in the text of the memorandum and emphasized by appendixes containing letters from Indian trades-unions.

— *Statement submitted to the joint committee on Indian reforms.* London, Indian Parliamentary Committee, 1 Robert Street, Adelphi, WC 2, 1199. 8 pp. Price, 2d.

Brief exposition of the conditions surrounding labor in India, concluding with an earnest "appeal to the Joint Committee to enable the Indian laborer to obtain some political power, to set his feet on the road of political advancement, and thereby of his own uplift."

WARREN, KATHERINE. *List of references on labor turnover. In Special Libraries, Industrial number.* Boston, Mass., October, 1919. Pp. 198-203.

WEEKS, ESTELLA T. *Reconstruction programs. A comparative study of their content and of the viewpoints of the issuing organizations. Prepared for the Research section, Industrial committee, War work council of the National Board, Young Women's Christian Associations.* New York, The Womans Press, 1919. 95 pp. Chart.

Various reconstruction programs are analyzed and their chief points compared without any attempt being made to argue for or against them. There is a foreword by Herbert N. Shenton, of the Council of National Defense; an introduction entitled "What is reconstruction?"; four parts, in which the material analyzed is grouped under the heads of Working men and women—their life and work. Collective bargaining, Individual Democracy, and International labor problems; a postscript headed A new spirit and a new road; and a bibliography of programs of reconstruction.

MONTHLY LABOR REVIEW

VOL. X—NO. 2

WASHINGTON

FEBRUARY, 1920

Employees' Representation in Management of Industry.¹

By ROYAL MEEKER, COMMISSIONER OF LABOR STATISTICS.

THE multitude of causes making for the general dissatisfaction prevailing among workers which is called industrial unrest may be compressed under three heads: (1) Dissatisfaction with their wages, hours, and earnings—a feeling on the part of the workers that they are not receiving a fair share of the product of industry; a widespread belief that workers are being exploited by owners, employers, and their managers. The rapid rise in prices has greatly strengthened this belief even among those workers who have secured wage increases in excess of increases in the cost of living. Many thousands of workmen who have profited greatly by the price upheavals of the war period firmly believe they are worse off than before the war, or, at least, that the employers have gained more than the workmen and hence the workmen are being done by the employers. (2) Dissatisfaction with the management of industry—a feeling that not only are the workers being exploited but that the “enterprisers” are not as enterprising and their managers not as capable as has been commonly supposed. Work is made needlessly monotonous and uninteresting and production is thereby curtailed. The workers feel that industries are being conducted from a distance by men who have little or no first-hand knowledge of conditions and who do not understand the workers’ point of view, knowledge, and capacity. These grievances are due in large part to big business organization which has brought about what may justly be called “absentee landlordism” in industry. (3) Dissatisfaction with the nature of their work—a feeling that industry is a treadmill for workers of all kinds, but especially for manual workers, and that the opportunities for successful and permanent escape into managerial, employing, and capitalistic positions are scarce and growing scarcer every day.

Through collective bargaining workers have long exercised a greater or less degree of control over wages, hours, and conditions of

¹ Address delivered at a joint session of the American Economic Association and the American Association for Labor Legislation, held at Chicago, Ill., Dec. 30, 1919.

labor. During the war the principle of collective bargaining was of necessity, albeit in many cases rather grudgingly, recognized by all employers engaged on direct Government work or in the production of essentials. The Quartermaster Corps, the Ordnance Office, the Emergency Fleet Corporation of the Shipping Board, the National War Labor Board, the Fuel Administration, and many other Government agencies, sought to secure greater and more continuous production by means of collective agreements covering wages and hours and by establishing committees to represent the workers in dealing with the management on shop conditions. Since the signing of the armistice, Government control over industry has been either abandoned or greatly relaxed and industrial warfare has grown more extensive and more bitter. The elephantine governmental machines built and set up to adjust labor disputes were clumsy and cumbersome, and oftentimes worked against each other so that a labor adjustment made by one agency produced labor maladjustment in all other fields. Each agency dealing with labor was a law unto itself. The terms "cooperation," "coordination" and "correlation" were heard on every hand until they became a weariness to the flesh, but the labor adjusters seldom were able to cooperate, coordinate, or correlate anything. I do not say this in the spirit of caviling criticism. No one is to be blamed. On the contrary, great praise is due to those who, in spite of constitutional inhibitions and public indifference, succeeded in partially organizing our industrial chaos. It is greatly to be regretted that these men were not able to formulate a national labor policy for war to be continued in peace. Probably if the war had continued four more years a national labor policy must have been worked out, with the administration centered in one national industrial commission or in a series of commissions, one for each industry. Numerous district boards to take care of local disputes would have been necessary under either system. Of course, no one would be willing to have the war prolonged for four days, even to secure such a highly desirable result as the establishment of a national system of adjusting labor grievances and determining industrial policies on a democratic basis. We can only hope that the terrors of peace will be as potent as the horrors of war in compelling the Bolsheviki of the right and of the left to come together on a reasonable compromise.

Absentee Ownership of Industrial Establishments.

ABSENTEE landlordism is as bad in the field of economics as in the field of politics. Labor unrest in the present-day meaning of the term is a natural and inevitable result of the industrial revolution, machine production, absentee ownership of industrial estab-

lishments, and the centering of industrial management in the hands of managers of finance whose offices are in the big banks and office buildings of the centers of finance and trade. Strikes, in the modern sense, were practically unknown until industrial units had grown to such a size as to erect formidable barriers between the workers on the one side and the responsible owners and managers on the other. The spirit of antagonism against the absentee ownership of farms in Kansas and Nebraska and other Western States, which culminated in the Farmers' Alliance and Populist movements, manifests itself to-day against the absentee owners of industry.

Lack of interest in work grows out of absentee ownership. The absent industrial landlords, interested only or principally in dividends, employed experts, scientific managers, to produce a substitute for the old-time workman's interest in his work. The scientific managers have been attacked so violently and so frequently that I feel obliged to apologize for referring at this point to the most obvious and fundamental error contained in their original program. The scientific managers did not, in the beginning of the efficiency movement, differentiate between the workman and the machine or tool with which he worked. Men and machines were to be made to do each operation the "easiest" way; that is, with the least lost motion and expenditure of effort. The scientific managers have not yet grasped fully the difference between a man and a machine and the economy of making use of the heads of the workers as well as their arms and legs. A good deal is said about the worker's psychology, as though the worker were some strange, wild beast with a peculiar psychology all his own, quite different from the psychology of employers and managers. It is because the psychology of the worker is the same as the psychology of the employer and the manager that strikes and lockouts occur with such distressing frequency.

If we grant that a works manager has more brains and knowledge than any of the employees under his direction, he should be able to organize and plan the work so that if the workmen, instead of following their own devices, follow the plan laid out, the output would be bettered both in quantity and quality while the physical energy expended to attain this output would be lessened. The theoretical ideal of maximum output with minimum expenditure of effort, which can be figured out by mathematical formulas and pictured on charts, is never attained in practice. A much more imperfect layout, which leaves much to the ingenuity and initiative of the individual workmen, in practice almost always achieves much better results. A man will willingly work much harder, expend much more energy, and be much less fatigued working on a job which he has a part in planning, and for the results of which

he is responsible. The present-day movement for industrial democracy is a partial recognition of the fundamental psychological phenomenon that industrial fatigue is not simply an engineering question to be stated mathematically in foot-pounds per hour or even a physiological question having to do with calories burned up in the body. Work is hard primarily because it is uninteresting and monotonous, or easy because it demands ingenuity or skill. Paradoxical as it seems, the way to make work easier is to make it harder by requiring more of the workmen. The mental application required or the muscular effort put forth has little to do with the hardness of a job. In so far as scientific management has resulted in merely breaking processes up into their component parts, segregating so far as possible the purely muscular and mechanical operations from the creative and planning functions, so-called "efficiency" has resulted in the most disastrous inefficiency. The "easier" specific operations or fractions of operations have been made, the harder they have become. All the efforts of the scientific managers and efficiency experts to arouse, increase, and maintain the interest of the workman in his work are bound to be fruitless unless the work itself is made interesting. The worker must be called upon to use his head in planning as well as his hands and feet in executing his work if contentment is to be attained in industry.

The Whitley Plan in Great Britain.

DURING the war the scarcity of workers and the need to increase output of essentials gave the workers great power. Private employers and Governments were obliged to give more consideration to the rights and desires of laborers than was ever given before. The fear that employees might use their vastly increased power to seize political control and perhaps revolutionize and even socialize industry and private property led private employers the world over to experiment with different plans for participation by employees, to some degree, in the "management of industry." The Governments of the world, recognizing the seriousness of the labor unrest, have tried to guide and control the efforts of the workers to secure more power in the planning and carrying out of industrial policies. Great Britain has been experimenting with the Whitley system of organizing industries into national and district joint industrial councils and works committees. National joint industrial councils have been set up in some 50 industries, besides the councils established in the Government departments for both manual and clerical employees. It must not be assumed that these industries are fully organized under the so-called Whitley system and that all industrial unrest

has become a thing of the past. In fact, the national joint industrial councils are analogous to the roof of a house suspended in mid-air with no supporting side walls or foundations upon which to rest. Speakers and writers are wont to refer glibly to the "solution" of labor unrest worked out and put into practice in Great Britain. The facts are that only three industries have set up complete "Whitley systems" of joint industrial representation of employers and employees, with a national council and district councils for the industry and works committees for individual shops, and these three industries are relatively insignificant, namely match, rubber, and pottery manufacturing. I am told that there are only two match factories in Great Britain. Rubber manufacture increased in importance during the war. Pottery is of far more importance than the other two industries, but does not rank with the great basic industries of Great Britain. Even in the three fully organized industries the organization is almost purely formal, being for the most part a paper organization. It must not be assumed that this interesting attempt to make industrial management more democratic has failed. It is merely in the experimental stage. The system has not been accepted by either employees or employers generally. It must not be too hastily assumed that Great Britain has discovered a magic formula for "solving" all industrial unrest. It might seem from the wildly exaggerated accounts which have appeared in some quarters that the eager industrial alchemists in Great Britain seeking after the industrial philosopher's stone have found instead the Blarney stone. The search has, however, only just begun and what, if anything, will be found can not yet be foretold. The experts in the division of the Ministry of Labor which is dealing with these industrial councils, holding meetings with employers and employees constantly and setting up new national industrial councils about every week, do not proclaim that industrial democracy has been achieved and labor unrest solved by the organization of national councils. Everything is still in the experimental stage, with a strong probability that the first experiments will be, at best, only partially successful and that only by trial and error and after many experiments will a solid basis of settlement be reached.

It was my good fortune to be present at the first industrial conference called by Premier Lloyd George, which met in London February 27, 1919. This was a most impressive assemblage and it transacted an amazing amount of business in its lifetime of one day, especially as the whole forenoon was given up to an oratorical Donnybrook fair in which everybody took a crack at the premier's head, while he sat by and really seemed to enjoy the proceedings. As a result of this first conference, a joint committee consisting of 30 representatives of

employers and 30 representatives of employees was appointed. This committee reported on April 4 recommending the establishment of a permanent industrial conference, made up of representatives of employers and employees to meet annually or at the call of the Government and to advise the Government in matters of industrial policy. It was intended to be a sort of industrial parliament or advisory council. Its recommendations will have no binding force, but they may and probably will be very illuminating and helpful to the political Government. This extra-legal industrial parliament is merely another industrial experiment. It may eventually help to solve the problem of industrial unrest, but it hasn't done so yet. The four biggest trade-union organizations, namely, the Textile Workers, the Engineering Trades, the National Union of Railwaymen, and the General Workers' Union, have refused to send, or at least have refrained from sending, representatives to the permanent industrial conference. The employers who deal with these union men are also holding aloof.

Employees' Representation Plans in the United States.

IN OUR own country, as contrasted with Great Britain, nothing so ambitious nor so well thought out has been tried. During the war numerous "shop committees" giving a measure of representation to the workers were set up in many establishments, but no permanent nation-wide organization was created to tie these shop committees into a system, unless perhaps the Shipping Board and the Railroad Administration may be spoken of as permanent bodies.

The plan to bring the employees into closer relations with their employers by means of "shop stewards," "shop committees," "works councils," or other means is often hailed as the dawn of a new democracy in industry. It is new as compared with 10 years ago, or even 5 years ago; but it can not be too emphatically stated that democracy in industry is not a discovery of the great World War. In fact, with all the shop committees and works councils of to-day, we have much less democracy in industry than obtained 40 years ago or even in the Middle Ages, or at any time before the introduction of power-driven machinery with its tendency to segregate the employers and managers from their employees. The shop committee is the present-day attempt to restore some of the democracy lost through machine industry and big business. While it is, of course, impossible that there can ever be as complete democracy in a large plant as in a small plant, it is often true that the workers' committees of the large plants are able to secure better conditions and more consideration for the workers than the workers in the smaller plants are able to secure for themselves.

The different types of shop committees and works councils in this country which I have been able to examine may be divided into three pretty distinct groups, namely (1) closed-shop committees of union workmen, chosen exclusively by union men affiliated with national or international unions; (2) open-shop committees, composed of workers chosen by the votes of all workers who have been employed in the shop the required period of time; (3) open-closed-shop committees, chosen by all workers qualified to vote in a shop that is closed against trade-unions and which may or may not have a local plant or corporation organization of the workers. There is a monotonous sameness in the constitutions and by-laws or plans of organizations within each of these three groups. There is in fact little fundamental variation in the published statements of the objects sought and the plans of organization as between group and group. This sameness in descriptive language makes tabulation of the hundreds of shop-committee plans easy and the results of such tabulation perfectly useless or rather utterly misleading. I have therefore made no attempt to enumerate the different kinds of shop committees as to their attitude toward trade-unions. Each plan and even each shop committee must be studied in order to find out just how democratic it is and whether it is working as the employers and managers say it is. The trade-unions, naturally enough, want all shop committees to be tied up to the national craft organizations. The huge majority of employers in this country are, and always have been, opposed to labor organizations. The President's first Industrial Conference came to a deadlock on the question of the right of employees to organize and to choose representatives to deal with the management. The employer group in the conference must be taken as representing the majority of employers the country over. The speeches made by these representative employers were often difficult to understand, but their attitude of mind was never for a moment in doubt. They had been driven by hard experience to abandon individual bargaining with each employee and to accept collective bargaining, but they vigorously maintained their right to dictate the terms of the collective bargain. These employers conceded the right of workers to organize in a given plant and to be represented by representatives chosen from among the employees of that plant, provided the representatives so chosen were agreeable to the management of said plant. The trade-unionists on the other hand insisted upon the right of the workers to choose the representatives whom they thought could best speak for them and make clear their needs and wishes.

It is interesting to note that, respecting labor organization, the position of organized employers and employees is exactly reversed in Great Britain as compared with the United States. We are to-

day exactly where the British were about 30 years ago. The question of national unions versus plant unions was fought out in Great Britain and won by the workers. British employers were obliged to accept the result and bargained collectively with the representatives of the national unions. During the war the workers rebelled against this system, insisting that wages, hours, and shop conditions should be negotiated for each shop by the local shop committees. The employers stood up valiantly for the established order, and insisted that they would have nothing to do with local shop committees, but would bargain collectively only with truly responsible and representative bodies, the executives of the national trade-unions. American employers, equally valiant for the established order, will have nothing to do with irresponsible, unrepresentative, officials of national trade-unions and insist on bargaining collectively with representatives of the workers who know the local situation and who are chosen from the shop where a dispute is pending, provided always that these worker representatives fulfill the employers' ideas of a bona fide representative. One of the biggest questions to be settled is whether employees' representation is to be local and under the direct control and domination of the employer, or whether it is to be nation or world wide and under the control of the workers themselves, or whether the general public will insist on being a party to every collective agreement so as to prevent the employers and the employees from agreeing too agreeably and charging the bill to the ultimate consumer.

As to function, most shop committees deal with grievances, working conditions (i. e., safety, sanitation, and hygiene), wages and hours of labor, and methods of wage payments. Oftentimes a different shop committee is created to deal with each separate function coming under the general head of industrial relations. As to participation in management of industry in the true sense of the term there is as yet practically none in the United States. A great many general managers and directors of personnel say the employees have been taken into partnership and are taking part in the management of the business like true industrial democrats. No doubt these managers and directors honestly think they have achieved industrial democracy, but in the systems of employee representation which I have been able to examine the still small voice of the general manager could be heard very, very distinctly above the roar of the shop committee whirlwind or the crash of the works council earthquake. I do not say that the existing shop committees have done nothing to democratize industry. They have; and they are, in my opinion, to be heartily commended and given every encouragement. As indicated above, a few establishments have progressed to the point where the

employees' voices do have some weight in determining policies and methods and in planning work.

As to the method by which representatives of workers are chosen to the shop committees, there are almost as many different plans as there are different plants having such plans. The plan by which representation or participation of the employees is secured is of little importance compared to the scope of the functions which the committees or representatives of the workers are permitted or are able to exercise.

Experiments in Employees' Management in Great Britain.

A BIGGER question even than that of how collective bargains are to be made and who are to be parties thereto is the question of the scope and content of the collective bargain itself. The radical trade-unionists of Great Britain, and to a much less extent in the United States, are insisting that the workers shall take a larger and larger share in management, until ultimately all or at least the more important industries shall be conducted by the workers. A few interesting experiments in employees' management are already being tried out in Great Britain, for example, the John Dawson works at Newcastle-on-Tyne, under the managership of Mr. Leonard Humphrey. Mr. Humphrey started with nothing and built up a very profitable airplane factory during the war. He is or was, when I interviewed him, the managing director of the John Dawson Co. The company consists of all the employees of the factory. The books of the company are open to the representatives of the employees so that they know at all times the costs of raw materials, machines, tools, and labor, the allowance for depreciation and obsolescence, and the selling price of the finished products. The workers own collectively 50 per cent of the stock of the company; the other 50 per cent is owned by Mr. Humphrey. While the workers can not therefore fire Mr. Humphrey if they should become dissatisfied with him, still they could break up the company. They had no desire to do so when I was in England because they felt that they really were helping to manage a very successful enterprise, and that Mr. Humphrey was the best manager obtainable. During the war Mr. Humphrey paid wages above the scale for all trades employed in the John Dawson factory. The working-day was reduced, if I remember correctly, to 8 hours per day and 44 hours per week. Mr. Humphrey said production per day and per week had increased remarkably, and it was his intention to reduce the working-day to 6 hours. After the signing of the armistice the factory took up the manufacture of high-grade furniture and pianos in addition to the manufacture of airplanes for commercial uses. This factory is one of the few bona fide experiments in industrial democracy.

Several obvious criticisms will at once come into the minds of all. First, John Dawson was a war baby and granting that industrial democracy may be a fine pabulum for war babies, it may disagree with peace babies. This may well be. Many experiments can be safely made with a superprosperous enterprise that would result fatally with a minimum-of-subsistence enterprise. Again, the class of workers attracted by the high wages paid at the John Dawson works was no doubt much above the average. While an industrial democracy might be conducted by these picked, intelligent men it might fail if it fell into the hands of the average workman. If every employer started to John Dawsonize, the result might be industrial chaos as bad or worse than that we experienced as a result of the "cost plus" contracts for making uniforms, and constructing cantonments, ships, factories, and other things.

Workers Desire Real Responsibility in Management.

OF ALL the many hundreds of systems of "industrial democracy" which I have studied very few give promise of accomplishing much in the way of winning the enthusiastic support of the workers, because little, if any, additional authority over or responsibility for methods and results is accorded them. In the great majority of plans, the workers are permitted only to participate in managing, under safeguards and direction or at least suggestion from above, matters of safety, sanitation, benefit funds, and other "welfare" activities. No eager, enthusiastic response from the workers can be expected from such ultra-conservative adventures in industrial radicalism. I do not mean that these plans are, in the great majority of cases, insincere schemes intended to deceive the worker into thinking he is being taken into partnership when he is really only being "taken in." Nothing of the sort. I think employers in general sincerely desire to make concessions to labor. Of course, they want to concede as little as is absolutely necessary to prevent the spread of those radical things with the fearsome Russian names. Perhaps as time goes by the workers will be given the opportunity to demonstrate that they are worthy of greater responsibilities and capable of more constructive contributions to industrial management. None of the shop committees and works councils have been operating long enough to warrant generalizations about future developments. As a worker and a student I feel that there is a tremendous latent creative force in the workers of to-day, which is not being utilized at all. This force may be likened to the force of the waves and the tides of the ocean. No engineer has as yet been able to devise a practical method for utilizing the giant strength of the sea; but every industrial engineer with any imagination whatsoever dreams

of the day when this giant will be harnessed and made to do the work of the world. Perhaps it is not and never will be economically feasible to harness the sea. It is likewise possible that human nature is fundamentally so constituted that it never will be practicable to utilize the good will, enthusiasm, and creative power of the workers—to substitute leadership for drivership in industry. It may be that industrial peace on earth is unattainable, and that industrial war is the natural state of man; but I do not believe it. Anyhow, it is worth a thorough trial in order to find out whether the workers, if given responsibility in industrial management, will become so interested in their work that they won't have time to be restless.

During and immediately after the war, employers were alarmed at the thought of the power of the radical labor movement. The collapse of the railway strike in Great Britain and the failure of the British miners to win out on the nationalization of the coal mines have greatly cheered employers everywhere. The relative industrial calm in France, Belgium, and Germany also has had a marked effect. In our own country the longshoremen's strike, the printers' strike, the steel workers' strike, and the coal miners' strike have greatly weakened the influence of the radical laborite and socialist leaders, while they certainly have not strengthened the conservative trade-unionists. I think it is perfectly obvious that the wild stampede on the part of employers to set up "shop committees" and "works councils" and to proclaim the dawn of the new day of "industrial democracy" is over. From now on few new plans will be set up. Probably many plans already created will be abandoned or allowed to perish by atrophy. The sincere attempts to enlist the sympathy and help of the workers in bringing about industrial peace, however, will continue and will be gradually perfected.

I am not much interested in the possibility of the workers owning, managing, and operating all industries or even the more important ones. At the present moment we are not in sight of that consummation. It must be conceded that the worker who has served long enough in a plant to have acquired a special skill in doing his work, even if it is only shoveling slag or wheeling a barrow, has invested something in that industry and that plant, and that he has thereby acquired a right to have his views as to the conditions surrounding his job considered by the management. A means should be provided whereby he may present any grievance or any suggestion he may have to make to somebody representing the management. He may get turned down. None of us ever gets all he wants or asks for. But every worker ought to have the right to give his views on industrial matters just as he has the right to express his views on

political or religious matters. The workers will not be satisfied merely to express views. They want the assurance that their views will be given more than a perfunctory consideration. No class of people is more responsive to fair, open-handed dealing than the workers. If their proposals are discussed openly with them and shown to be impracticable, or inexpedient for the time, they have almost invariably been quite ready to vote for the rejection of their own proposals.

There is a vast gulf fixed between expressing an opinion about the shape of the handle of the shovel one uses for heaving slag or the desirability of having a glee club rather than a debating society; and the planning and routing of work, devising methods and determining upon the tools, machines, and processes for making the finished product in a big plant. I insist that the management, even scientific management, has not a monopoly of all the brains in an establishment. The workers themselves can and do contribute much in the planning and doing of the work. What is of vastly more importance than the increase in production as a result of utilizing the latent intelligence, ingenuity, and enthusiasm of the workers, is the increase in contentment. Here is a vast source of industrial power which has been cut off, isolated, by the transformation of little business into big business. It will be difficult to tap this source, but tap it we must if we are to continue anything resembling the present industrial organization with its large scale production. The good will of the workers is a much more potent force making for industrial efficiency than all the scientific management formulas and systems of production. There is no inherent reason why the good will of the workers should not go hand in hand with scientific management. Until now the workers have had only antagonism for scientific management because the scientific manager never asked them for their opinions or ideas—he only told them what they were expected to do and the workers promptly did something else. I have already said workers are not different from employers. That is precisely what ails them. If employers will deal fairly and squarely with their employees, let them know all about the business except only those technical processes which must be kept secret, and take them into a real partnership production will be enormously improved both in quantity and quality. This may be just another way of saying that when the millennium comes there will be no industrial unrest, for there will be no industry no employers and no employees. Before abandoning ourselves completely to pessimism and despair we should at least try the experiment of giving the workers a real voice and responsibility in management.

Workers Interested in Distribution and Consumption of Product.

IN ALL discussions of employees' representation too much emphasis is placed on production and not enough on distribution and consumption of the product. The interest of the worker in increasing production is bound to wane, no matter how many representatives he may have on shop committees and works councils, no matter how much dependence is placed upon him in planning and carrying out his work, if in the division of the product he does not get or believes he does not get his fair share. The share due to labor as a whole and to each individual laborer is impossible of exact determination. The concept of economic law as a force, as compelling, as universal, as immutable, and as unerring as the law of gravitation is beautiful, but it doesn't get us anywhere. If there is an economic law working uninterruptedly to adjust the economic reward of each member of society in accordance with his economic merit, or, in other words, in proportion to his contribution to the economic product, it remains hidden beyond the ken of the labor statistician and administrator. Practically the share of labor is determined by the bargaining strength of the workers.

Of course, if the workers are to be admitted to participation in management, they must participate to some extent in the losses as well as the gains of industry. A practical method of payment would be to guarantee for each position a minimum wage which must be paid regardless of any losses which the business may suffer. In addition to the minimum, a bonus should be provided varying according to the contribution of the workers in cutting down labor costs, in reducing costs of management, in decreasing spoilage of material, in decreasing wear and tear on machines and tools, in improving quality of product, in increasing business, or in any other way. This would obviate the objection to most bonus schemes that the worker is penalized or rewarded for the inefficiency or the good judgment of the managers.

Democracy, if it is not to perish from the earth, must be organized for efficiency. It must become far more efficient than it ever has been at any time in the past. We are told that democracy has just won a tremendous victory over autocracy. Our rejoicings must be tempered by the remembrance of the awful cost of the victory in lives shattered and snuffed out, in wealth squandered and destroyed, in the chaos which has been unloosed on the earth. When we count up the costs we do not feel too confident of the fullness of this victory nor too secure in its beneficent results. The victors suffered far greater losses both in men and in material wealth than the vanquished. Democracy won by sheer weight of numbers and of wealth.

Had not autocracy been divided against itself it could not have been overthrown by the partial and inefficient democracies which opposed it. In order to win, democracy was driven to adopt autocratic methods and practices—methods and practices which still persist and fill democrats with apprehension. A speedy readjustment, political and industrial, on a more democratic basis is necessary. The few feeble, tottering steps which we have taken on the road toward democracy, both political and industrial, will not and can not be retraced. The evils, shortcomings, and imperfections of our present democracy can not be eradicated by reverting to autocracy which we have in part shaken off. The cure for democracy is more, not less, democracy.

Draft Conventions Adopted by International Labor Conference.

A FULL account of the proceedings of the International Labor Conference held in Washington, D. C., October 29 to November 29, 1919, was given in the January issue of the MONTHLY LABOR REVIEW. The references therein to the draft conventions and recommendations adopted by the conference were brief, the purpose being merely to record the action of the conference and the accompanying discussions, leaving for later publication the full text of the conventions as finally revised and adopted. The following is an official copy of the text of the conventions relating to the eight-hour day, unemployment, employment of women before and after childbirth, employment of women during the night, minimum age for admission of children to industrial employments, and night work of young persons employed in industry; and recommendations concerning unemployment, reciprocity of treatment of foreign workers, prevention of anthrax, protection of women and children against lead poisoning, the establishment of Government health services, and the application of the Bern convention of 1906 on the prohibition of the use of white phosphorus in the manufacture of matches.

Draft Conventions Adopted.

The Eight-hour Day.

The general conference of the International Labor Organization of the League of Nations, having been convened at Washington by the Government of the United States of America, on the 29th day of October, 1919, and having decided upon the adoption of certain proposals with regard to the "application of principle of the 8-hour day or of the 48-hour week," which is the first item in the agenda for the Washington meeting of the conference, and having determined that these proposals shall take the form of a draft international convention, adopts the following draft convention for ratification by the members of the International Labor Organization in accordance with the labor part of the Treaty of Versailles of June 28, 1919, and of the Treaty of St. Germain of September 10, 1919:

ARTICLE 1. For the purpose of this convention, the term "industrial undertaking" includes particularly:

(a) Mines, quarries, and other works for the extraction of minerals from the earth.

(b) Industries in which articles are manufactured, altered, cleaned, repaired, ornamented, finished, adapted for sale, broken up or demolished, or in

which materials are transformed; including shipbuilding and the generation, transformation, and transmission of electricity or motive power of any kind.

(c) Construction, reconstruction, maintenance, repair, alteration, or demolition of any building, railway, tramway, harbor, dock, pier, canal, inland waterway, road, tunnel, bridge, viaduct, sewer, drain, well, telegraphic or telephonic installation, electrical undertaking, gas work, waterwork or other work of construction, as well as the preparation for or laying the foundations of any such work or structure.

(d) Transport of passengers or goods by road, rail, sea or inland waterway, including the handling of goods at docks, quays, wharves or warehouses, but excluding transport by hand.

The provisions relative to transport by sea and on inland waterways shall be determined by a special conference dealing with employment at sea and on inland waterways.

The competent authority in each country shall define the line of division which separates industry from commerce and agriculture.

ART. 2. The working hours of persons employed in any public or private industrial undertaking or in any branch thereof, other than an undertaking in which only members of the same family are employed, shall not exceed 8 in the same day and 48 in the week, with the exceptions hereinafter provided for.

(a) The provisions of this convention shall not apply to persons holding positions of supervision or management, nor to persons employed in a confidential capacity.

(b) Where by law, custom, or agreement between employers' and workers' organizations, or where no such organizations exist between employers' and workers' representatives, the hours of work on one or more days of the week are less than eight, the limit of eight hours may be exceeded on the remaining days of the week by the sanction of the competent public authority, or by agreement between such organizations or representatives: *Provided, however,* That in no case under the provisions of this paragraph shall the daily limit of eight hours be exceeded by more than one hour.

(c) Where persons are employed in shifts it shall be permissible to employ persons in excess of 8 hours in any one day and 48 hours in any one week, if the average number of hours over a period of 3 weeks or less does not exceed 8 per day and 48 per week.

ART. 3. The limit of hours of work prescribed in article 2 may be exceeded in case of accident, actual or threatened, or in case of urgent work to be done to machinery or plant, or in case of "force majeure," but only so far as may be necessary to avoid serious interference with the ordinary working of the undertaking.

ART. 4. The limit of hours of work prescribed in article 2 may also be exceeded in those processes which are required by reason of the nature of the process to be carried on continuously by a succession of shifts, subject to the condition that the working hours shall not exceed 56 in the week on the average. Such regulation of the hours of work shall in no case affect any rest days which may be secured by the national law to the workers in such processes in compensation for the weekly rest day.

ART. 5. In exceptional cases where it is recognized that the provisions of article 2 can not be applied, but only in such cases, agreements between workers' and employers' organizations concerning the daily limit of work over a longer period of time, may be given the force of regulations, if the Government, to which these agreements shall be submitted, so decides. The average number of hours worked per week, over the number of weeks covered by any such agreement, shall not exceed 48.

ART. 6. Regulations made by public authority shall determine for industrial undertakings:

(a) The permanent exceptions that may be allowed in preparatory or complementary work which must necessarily be carried on outside the limits laid down for the general working of an establishment, or for certain classes of workers whose work is essentially intermittent.

(b) The temporary exceptions that may be allowed, so that establishments may deal with exceptional cases of pressure of work.

These regulations shall be made only after consultation with the organizations of employers and workers concerned, if any such organizations exist. These regulations shall fix the maximum of additional hours in each instance, and the rate of pay for overtime shall not be less than one and one-quarter times the regular rate.

ART. 7. Each Government shall communicate to the International Labor Office:

(a) A list of the processes which are classed as being necessarily continuous in character under article 4;

(b) Full information as to working of the agreements mentioned in article 5; and

(c) Full information concerning the regulations made under article 6 and their application.

The International Labor Office shall make an annual report thereon to the General Conference of the International Labor Organization.

ART. 8. In order to facilitate the enforcement of the provisions of this convention, every employer shall be required:

(a) To notify by means of the posting of notices in conspicuous places in the works or other suitable place, or by such other method as may be approved by the Government, the hours at which work begins and ends, and where work is carried on by shifts the hours at which each shift begins and ends. These hours shall be so fixed that the duration of the work shall not exceed the limits prescribed by this convention, and when so notified they shall not be changed except with such notice and in such manner as may be approved by the Government.

(b) To notify in the same way such rest intervals accorded during the period of work as are not reckoned as part of the working hours.

(c) To keep a record in the form prescribed by law or regulation in each country of all additional hours worked in pursuance of articles 3 and 6 of this convention.

It shall be made an offense against the law to employ any person outside the hours fixed in accordance with paragraph (a), or during the intervals fixed in accordance with paragraph (b).

ART. 9. In the application of this convention to Japan the following modifications and conditions shall obtain:

(a) The term "industrial undertaking" includes particularly—

The undertakings enumerated in paragraph (a) of article 1;

The undertakings enumerated in paragraph (b) of article 1, provided there are at least ten workers employed;

The undertakings enumerated in paragraph (c) of article 1, in so far as these undertakings shall be defined as "factories" by the competent authority;

The undertakings enumerated in paragraph (d) of article 1, except transport of passengers or goods by road, handling of goods at docks, quays, wharves, and warehouses, and transport by hand; and,

Regardless of the number of persons employed, such of the undertakings enumerated in paragraphs (b) and (c) of article 1 as may be declared by the competent authority either to be highly dangerous or to involve unhealthful processes.

(b) The actual working hours of persons of 15 years of age or over in any public or private industrial undertaking, or in any branch thereof, shall not exceed 57 in the week, except that in the raw-silk industry the limit may be 60 hours in the week.

(c) The actual working hours of persons under 15 years of age in any public or private industrial undertaking, or in any branch thereof, and of all miners of whatever age engaged in underground work in the mines, shall in no case exceed 48 in the week.

(d) The limit of hours of work may be modified under the conditions provided for in articles 2, 3, 4, and 5 of this convention, but in no case shall the length of such modification bear to the length of the basic week a proportion greater than that which obtains in those articles.

(e) A weekly rest period of 24 consecutive hours shall be allowed to all classes of workers.

(f) The provision in Japanese factory legislation limiting its application to places employing 15 or more persons shall be amended so that such legislation shall apply to places employing 10 or more persons.

(g) The provisions of the above paragraphs of this article shall be brought into operation not later than July 1, 1922, except that the provisions of article 4 as modified by paragraph (d) of this article shall be brought into operation not later than July 1, 1923.

(h) The age of 15 prescribed in paragraph (c) of this article shall be raised, not later than July 1, 1925, to 16.

ART. 10. In British India the principle of a 60-hour week shall be adopted for all workers in the industries at present covered by the factory acts administered by the Government of India, in mines, and in such branches of railway work as shall be specified for this purpose by the competent authority. Any modification of this limitation made by the competent authority shall be subject to the provisions of articles 6 and 7 of this convention. In other respects the provisions of this convention shall not apply to India, but further provisions limiting the hours of work in India shall be considered at a future meeting of the General Conference.

ART. 11. The provisions of this convention shall not apply to China, Persia, and Siam, but provisions limiting the hours of work in these countries shall be considered at a future meeting of the General Conference.

ART. 12. In the application of this convention to Greece, the date at which its provisions shall be brought into operation in accordance with article 19 may be extended to not later than July 1, 1923, in the case of the following industrial undertakings:

1. Carbon-bisulphide works,
2. Acids works,
3. Tanneries,
4. Paper mills,
5. Printing works,
6. Sawmills,
7. Warehouses for the handling and preparation of tobacco,
8. Surface mining,
9. Foundries,
10. Lime works,

11. Dye works,
12. Glassworks (blowers),
13. Gas works (firemen),
14. Loading and unloading merchandise;

and to not later than July 1, 1924, in the case of the following industrial undertakings:

1. Mechanical industries: Machine shops for engines, safes, scales, beds, tacks, shells (sporting), iron foundries, bronze foundries, tin shops, plating shops, manufactories of hydraulic apparatus.

2. Constructional industries: Lime-kilns, cement works, plasterers' shops, tile yards, manufactories of bricks and pavements, potteries, marble yards, excavating and building work.

3. Textile industries: Spinning and weaving mills of all kinds, except dye works.

4. Food industries: Flour and grist mills, bakeries, macaroni factories, manufactories of wines, alcohol, and drinks, oil works, breweries, manufactories of ice and carbonated drinks, manufactories of confectioners' products and chocolate, manufactories of sausages and preserves, slaughterhouses, and butcher shops.

5. Chemical industries: Manufactories of synthetic colors, glassworks (except the blowers), manufactories of essence of turpentine and tartar, manufactories of oxygen and pharmaceutical products, manufactories of flaxseed oil, manufactories of glycerine, manufactories of calcium carbide, gas works (except the firemen).

6. Leather industries: Shoe factories, manufactories of leather goods.

7. Paper and printing industries: Manufactories of envelopes, record books, boxes, bags, bookbinding, lithographing, and zinc-engraving shops.

8. Clothing industries: Clothing shops, underwear and trimmings, workshops for pressing, workshops for bed coverings, artificial flowers, feathers, and trimmings, hat and umbrella factories.

9. Woodworking industries: Joiners' shops, coopers' sheds, wagon factories, manufactories of furniture and chairs, picture-framing establishments, brush and broom factories.

10. Electrical industries: Power houses, shops for electrical installations.

11. Transportation by land: Employees on railroads and street cars, firemen, drivers, and carters.

ART. 13. In the application of this convention to Roumania the date at which its provisions shall be brought into operation in accordance with article 19 may be extended to not later than July 1, 1924.

ART. 14. The operation of the provisions of this convention may be suspended in any country by the Government in the event of war or other emergency endangering the national safety.

ART. 15. The formal ratifications of this convention, under the conditions set forth in Part XIII of the Treaty of Versailles of June 28, 1919, and of the Treaty of St. Germain of September 10, 1919, shall be communicated to the secretary general of the League of Nations for registration.

ART. 16. Each member which ratifies this convention engages to apply it to its colonies, protectorates and possessions which are not fully self-governing:

(a) Except where owing to the local conditions its provisions are inapplicable; or

(b) Subject to such modifications as may be necessary to adapt its provisions to local conditions.

Each member shall notify to the International Labor Office the action taken in respect of each of its colonies, protectorates, and possessions which are not fully self-governing.

ART. 17. As soon as the ratifications of two members of the International Labor Organization have been registered with the secretariat, the secretary general of the League of Nations shall so notify all the members of the International Labor Organization.

ART. 18. This convention shall come into force at the date on which such notification is issued by the secretary general of the League of Nations, and it shall then be binding only upon those members which have registered their ratification with the secretariat. Thereafter this convention will come into force for any other member at the date on which its ratification is registered with the secretariat.

ART. 19. Each member which ratifies this convention agrees to bring its provisions into operation not later than July 1, 1921, and to take such action as may be necessary to make these provisions effective.

ART. 20. A member which has ratified this convention may denounce it after the expiration of 10 years from the date on which the convention first comes into force, by an act communicated to the secretary general of the League of Nations for registration. Such denunciation shall not take effect until one year after the date on which it is registered with the secretariat.

ART. 21. At least once in 10 years the governing body of the International Labor Office shall present to the general conference a report on the working of this convention, and shall consider the desirability of placing on the agenda of the conference the question of its revision or modification.

ART. 22. The French and English texts of this convention shall both be authentic.

Unemployment.

The general conference of the International Labor Organization of the League of Nations, having been convened at Washington by the Government of the United States of America, on the 29th day of October, 1919, and having decided upon the adoption of certain proposals with regard to the "question of preventing or providing against unemployment," which is the second item in the agenda for the Washington meeting of the conference, and having determined that these proposals shall take the form of a draft international convention, adopts the following draft convention for ratification by the members of the International Labor Organization, in accordance with the labor part of the Treaty of Versailles of June 28, 1919, and of the Treaty of St. Germain of September 10, 1919:

ARTICLE 1. Each member which ratifies this convention shall communicate to the International Labor Office, at intervals as short as possible and not exceeding three months, all available information, statistical or otherwise, concerning unemployment, including reports on measures taken or contemplated to combat unemployment. Whenever practicable, the information shall be made available for such communication not later than three months after the end of the period to which it relates.

ART. 2. Each member which ratifies this convention shall establish a system of free public employment agencies under the control of a central authority. Committees, which shall include representatives of employers and of workers, shall be appointed to advise on matters concerning the carrying on of these agencies.

Where both public and private free employment agencies exist, steps shall be taken to coordinate the operations of such agencies on a national scale.

The operations of the various national systems shall be coordinated by the International Labor Office in agreement with the countries concerned.

ART. 3. The members of the International Labor Organization which ratify this convention and which have established systems of insurance against unemployment shall, upon terms being agreed between the members concerned, make arrangements whereby workers belonging to one member and working in the territory of another shall be admitted to the same rates of benefit of such insurance as those which obtain for the workers belonging to the latter.

ART. 4. The formal ratifications of this convention, under the conditions set forth in Part XIII of the Treaty of Versailles of June 28, 1919, and of the Treaty of St. Germain of September 10, 1919, shall be communicated to the secretary general of the League of Nations for registration.

ART. 5. Each member which ratifies this convention engages to apply it to its colonies, protectorates and possessions which are not fully self-governing:

(a) Except where owing to the local conditions its provisions are inapplicable; or

(b) Subject to such modifications as may be necessary to adapt its provisions to local conditions.

Each member shall notify to the International Labor Office the action taken in respect of each of its colonies, protectorates and possessions which are not fully self-governing.

ART. 6. As soon as the ratifications of three members of the International Labor Organization have been registered with the secretariat, the Secretary General of the League of Nations shall so notify all the members of the International Labor Organization.

ART. 7. This convention shall come into force at the date on which such notification is issued by the secretary general of the League of Nations, but it shall then be binding only upon those members which have registered their ratifications with the secretariat. Thereafter this convention will come into force for any other member at the date on which its ratification is registered with the secretariat.

ART. 8. Each member which ratifies this convention agrees to bring its provisions into operation not later than July 1, 1921, and to take such action as may be necessary to make these provisions effective.

ART. 9. A member which has ratified this convention may denounce it after the expiration of 10 years from the date on which the convention first comes into force, by an act communicated to the secretary general of the League of Nations for registration. Such denunciation shall not take effect until one year after the date on which it is registered with the secretariat.

ART. 10. At least once in 10 years the governing body of the International Labor Office shall present to the general conference a report on the working of this convention, and shall consider the desirability of placing on the agenda of the conference the question of its revision or modification.

ART. 11. The French and English texts of this convention shall both be authentic.

Employment of Women Before and After Childbirth.

The general conference of the International Labor Organization of the League of Nations, having been convened at Washington by the Government of the United States of America on the 29th day of October, 1919, and having decided

upon the adoption of certain proposals with regard to "women's employment, before and after childbirth, including the question of maternity benefit," which is part of the third item in the agenda for the Washington meeting of the conference, and having determined that these proposals shall take the form of a draft international convention, adopts the following draft convention for ratification by the members of the International Labor Organization, in accordance with the labor part of the Treaty of Versailles of June 28, 1919, and of the Treaty of St. Germain of September 10, 1919:

ARTICLE 1. For the purpose of this convention, the term "industrial undertaking" includes particularly:

(a) Mines, quarries, and other works for the extraction of minerals from the earth.

(b) Industries in which articles are manufactured, altered, cleaned, repaired, ornamented, finished, adapted for sale, broken up or demolished, or in which materials are transformed; including shipbuilding, and the generation, transformation, and transmission of electricity or motive power of any kind.

(c) Construction, reconstruction, maintenance, repair, alteration, or demolition of any building, railway, tramway, harbor, dock, pier, canal, inland waterway, road, tunnel, bridge, viaduct, sewer, drain, well, telegraphic or telephonic installation, electrical undertaking, gas work, waterwork, or other work of construction, as well as the preparation for or laying the foundation of any such work or structure.

(d) Transport of passengers or goods by road, rail, sea, or inland waterway, including the handling of goods at docks, quays, wharves, and warehouses, but excluding transport by hand.

For the purpose of this convention, the term "commercial undertaking" includes any place where articles are sold or where commerce is carried on.

The competent authority in each country shall define the line of division which separates industry and commerce from agriculture.

ART. 2. For the purpose of this convention, the term "woman" signifies any female person, irrespective of age or nationality, whether married or unmarried, and the term "child" signifies any child, whether legitimate or illegitimate.

ART. 3. In any public or private industrial or commercial undertaking, or in any branch thereof, other than an undertaking in which only members of the same family are employed, a woman—

(a) Shall not be permitted to work during the six weeks following her confinement.

(b) Shall have the right to leave her work if she produces a medical certificate stating that her confinement will probably take place within six weeks.

(c) Shall, while she is absent from her work in pursuance of paragraphs (a) and (b), be paid benefits sufficient for the full and healthy maintenance of herself and her child, provided either out of public funds or by means of a system of insurance, the exact amount of which shall be determined by the competent authority in each country, and as an additional benefit shall be entitled to free attendance by a doctor or certified midwife. No mistake of the medical adviser in estimating the date of confinement shall preclude a woman from receiving these benefits from the date of the medical certificate up to the date on which the confinement actually takes place.

(d) Shall in any case, if she is nursing her child, be allowed half an hour twice a day during her working hours for this purpose.

ART. 4. Where a woman is absent from her work in accordance with paragraphs (a) or (b) of article 3 of this convention, or remains absent from her

work for a longer period as a result of illness medically certified to arise out of pregnancy or confinement and rendering her unfit for work, it shall not be lawful, until her absence shall have exceeded a maximum period to be fixed by the competent authority in each country, for her employer to give her notice of dismissal during such absence, nor to give her notice of dismissal at such a time that the notice would expire during such absence.

ART. 5. The formal ratifications of this convention, under the conditions set forth in Part XIII of the Treaty of Versailles of June 28, 1919, and of the Treaty of St. Germain of September 10, 1919, shall be communicated to the secretary general of the League of Nations for registration.

ART. 6. Each member which ratifies this convention engages to apply it to its colonies, protectorates, and possessions which are not fully self-governing:

(a) Except where, owing to the local conditions, its provisions are inapplicable; or

(b) Subject to such modifications as may be necessary to adapt its provisions to local conditions.

Each member shall notify to the International Labor Office the action taken in respect of each of its colonies, protectorates, and possessions which are not fully self-governing.

ART. 7. As soon as the ratifications of two members of the International Labor Organization have been registered with the secretariat, the secretary general of the League of Nations shall so notify all the members of the International Labor Organization.

ART. 8. This convention shall come into force at the date on which such notification is issued by the secretary general of the League of Nations, but it shall then be binding only upon those members which have registered their ratifications with the secretariat. Thereafter this convention will come into force for any other member at the date on which its ratification is registered with the secretariat.

ART. 9. Each member which ratifies this convention agrees to bring its provisions into operation not later than July 1, 1922, and to take such action as may be necessary to make these provisions effective.

ART. 10. A member which has ratified this convention may denounce it after the expiration of 10 years from the date on which the convention first comes into force, by an act communicated to the secretary general of the League of Nations for registration. Such denunciation shall not take effect until one year after the date on which it is registered with the secretariat.

ART. 11. At least once in 10 years the governing body of the International Labor Office shall present to the general conference a report on the working of this convention, and shall consider the desirability of placing on the agenda of the conference the question of its revision or modification.

ART. 12. The French and English texts of this convention shall both be authentic.

Employment of Women During the Night.

The general conference of the International Labor Organization of the League of Nations, having been convened at Washington by the Government of the United States of America, on the 29th day of October, 1919, and having decided upon the adoption of certain proposals with regard to "women's employment: during the night," which is part of the third item in the agenda for the Washington meeting of the conference, and having determined that these proposals shall take the form of a draft international convention, adopts the following draft convention for ratification by the members of the International Labor Organization,

in accordance with the labor part of the Treaty of Versailles of June 28, 1919, and of the Treaty of St. Germain of September 10, 1919:

ARTICLE 1. For the purpose of this convention, the term "industrial undertaking" includes particularly:

(a) Mines, quarries, and other works for the extraction of minerals from the earth;

(b) Industries in which articles are manufactured, altered, cleaned, repaired, ornamented, finished, adapted for sale, broken up or demolished, or in which materials are transformed; including shipbuilding, and the generation, transformation, and transmission of electricity or motive power of any kind;

(c) Construction, reconstruction, maintenance, repair, alteration, or demolition of any building, railway, tramway, harbor, dock, pier, canal, inland waterway, road, tunnel, bridge, viaduct, sewer, drain, well, telegraphic or telephonic installation, electrical undertaking, gas work, waterwork, or other work of construction, as well as the preparation for or laying the foundations of any such work or structure.

The competent authority in each country shall define the line of division which separates industry from commerce and agriculture.

ART. 2. For the purpose of this convention, the term "night" signifies a period of at least 11 consecutive hours, including the interval between 10 o'clock in the evening and 5 o'clock in the morning.

In those countries where no Government regulation as yet applies to the employment of women in industrial undertakings during the night, the term "night" may provisionally, and for a maximum period of 3 years, be declared by the Government to signify a period of only 10 hours, including the interval between 10 o'clock in the evening and 5 o'clock in the morning.

ART. 3. Women without distinction of age shall not be employed during the night in any public or private industrial undertaking, or in any branch thereof, other than an undertaking in which only members of the same family are employed.

ART. 4. Article 3 shall not apply:

(a) In cases of force majeure, when in any undertaking there occurs an interruption of work which it was impossible to foresee, and which is not of a recurring character.

(b) In cases where the work has to do with raw materials or materials in course of treatment which are subject to rapid deterioration, when such night work is necessary to preserve the said materials from certain loss.

ART. 5. In India and Siam, the application of article 3 of this convention may be suspended by the Government in respect to any industrial undertaking, except factories as defined by the national law. Notice of every such suspension shall be filed with the International Labor Office.

ART. 6. In industrial undertakings which are influenced by the seasons and in all cases where exceptional circumstances demand it, the night period may be reduced to 10 hours on 60 days of the year.

ART. 7. In countries where the climate renders work by day particularly trying to the health, the night period may be shorter than prescribed in the above articles, provided that compensatory rest is accorded during the day.

ART. 8. The formal ratifications of this convention, under the conditions set forth in Part XIII of the Treaty of Versailles of June 28, 1919, and of the Treaty of St. Germain of September 10, 1919, shall be communicated to the secretary general of the League of Nations for registration.

ART. 9. Each member which ratifies this convention engages to apply it to its colonies, protectorates and possessions which are not fully self-governing:

(a) Except where owing to the local conditions its provisions are inapplicable; or

(b) Subject to such modifications as may be necessary to adapt its provisions to local conditions.

Each member shall notify to the International Labor Office the action taken in respect of each of its colonies, protectorates and possessions which are not fully self-governing.

ART. 10. As soon as the ratifications of two members of the International Labor Organization have been registered with the secretariat, the secretary general of the League of Nations shall so notify all the members of the International Labor Organization.

ART. 11. This convention shall come into force at the date on which such notification is issued by the secretary general of the League of Nations, but it shall then be binding only upon those members which have registered their ratifications with the secretariat. Thereafter this convention will come into force for any other member at the date on which its ratification is registered with the secretariat.

ART. 12. Each member which ratifies this convention agrees to bring its provisions into operation not later than July 1, 1922, and to take such action as may be necessary to make these provisions effective.

ART. 13. A member which has ratified this convention may denounce it after the expiration of 10 years from the date on which the convention first comes into force, by an act communicated to the secretary general of the League of Nations for registration. Such denunciation shall not take effect until one year after the date on which it is registered with the secretariat.

ART. 14. At least once in 10 years, the governing body of the International Labor Office shall present to the general conference a report on the working of this convention, and shall consider the desirability of placing on the agenda of the conference the question of its revision or modification.

ART. 15. The French and English texts of this convention shall both be authentic.

Minimum Age for Admission of Children to Industrial Employment.

The general conference of the International Labor Organization of the League of Nations, having been convened by the Government of the United States of America at Washington, on the 29th day of October, 1919, and having decided upon the adoption of certain proposals with regard to the "employment of children: minimum age of employment," which is part of the fourth item in the agenda for the Washington meeting of the conference, and having determined that these proposals shall take the form of a draft international convention, adopts the following draft convention for ratification by the members of the International Labor Organization, in accordance with the labor part of the Treaty of Versailles of June 28, 1919, and of the Treaty of St. Germain of September 10, 1919:

ARTICLE 1. For the purpose of this convention, the term "industrial undertaking" includes particularly:

(a) Mines, quarries, and other works for the extraction of minerals from the earth.

(b) Industries in which articles are manufactured, altered, cleaned, repaired, ornamented, finished, adapted for sale, broken up or demolished, or in which materials are transformed; including shipbuilding, and the generation, transformation, and transmission of electricity and motive power of any kind.

(c) Construction, reconstruction, maintenance, repair, alteration, or demolition of any building, railway, tramway, harbor, dock, pier, canal, inland waterway, road, tunnel, bridge, viaduct, sewer, drain, well, telegraphic or telephonic installation, electrical undertaking, gas work, water work, or other work of construction, as well as the preparation for or laying the foundations of any such work or structure.

(d) Transport of passengers or goods by road or rail or inland waterway, including the handling of goods at docks, quays, wharves, and warehouses, but excluding transport by hand.

The competent authority in each country shall define the line of division which separates industry from commerce and agriculture.

ART. 2. Children under the age of 14 years shall not be employed or work in any public or private industrial undertaking, or in any branch thereof other than an undertaking in which only members of the same family are employed.

ART. 3. The provisions of article 2 shall not apply to work done by children in technical schools, provided that such work is approved and supervised by public authority.

ART. 4. In order to facilitate the enforcement of the provisions of this convention, every employer in an industrial undertaking shall be required to keep a register of all persons under the age of 16 years employed by him, and of the dates of their births.

ART. 5. In connection with the application of this convention to Japan, the following modifications of article 2 may be made:

(a) Children over 12 years of age may be admitted into employment if they have finished the course in the elementary school;

(b) As regards children between the ages of 12 and 14 already employed, transitional regulations may be made.

The provision in the present Japanese law admitting children under the age of 12 years to certain light and easy employments shall be repealed.

ART. 6. The provisions of article 2 shall not apply to India, but in India children under 12 years of age shall not be employed—

(a) In manufactories working with power and employing more than 10 persons;

(b) In mines, quarries, and other works for the extraction of minerals from the earth;

(c) In the transport of passengers or goods, or mails, by rail, or in the handling of goods at docks, quays, and wharves, but excluding transport by hand.

ART. 7. The formal ratifications of this convention, under the conditions set forth in Part XIII of the Treaty of Versailles of June 28, 1919, and of the Treaty of St. Germain of September 10, 1919, shall be communicated to the secretary general of the League of Nations for registration.

ART. 8. Each member which ratifies this convention engages to apply it to its colonies, protectorates, and possessions which are not fully self-governing:

(a) Except where owing to the local conditions its provisions are inapplicable; or

(b) Subject to such modifications as may be necessary to adapt its provisions to local conditions.

Each member shall notify to the International Labor Office the action taken in respect to each of its colonies, protectorates, and possessions which are not fully self-governing.

ART. 9. As soon as the ratifications of two members of the International Labor Organization have been registered with the secretariat, the secretary

general of the League of Nations shall so notify all the members of the International Labor Organization.

ART. 10. This convention shall come into force at the date on which such notification is issued by the secretary general of the League of Nations, but it shall then be binding only upon those members which have registered their ratifications with the secretariat. Thereafter this convention will come into force for any other member at the date on which its ratification is registered with the secretariat.

ART. 11. Each member which ratifies this convention agrees to bring its provisions into operation not later than July 1, 1922, and to take such action as may be necessary to make these provisions effective.

ART. 12. A member which has ratified this convention may denounce it after the expiration of 10 years from the date on which the convention first comes into force, by an act communicated to the secretary general of the League of Nations for registration. Such denunciation shall not take effect until one year after the date on which it is registered with the secretariat.

ART. 13. At least once in 10 years, the governing body of the International Labor Office shall present to the general conference a report on the working of this convention, and shall consider the desirability of placing on the agenda of the conference the question of its revision or modification.

ART. 14. The French and English texts of this convention shall both be authentic.

Night Work of Young Persons Employed in Industry.

The general conference of the International Labor Organization of the League of Nations, having been convened by the Government of the United States of America at Washington, on the 29th day of October, 1919, and having decided upon the adoption of certain proposals with regard to the "employment of children during the night," which is part of the fourth item in the agenda for the Washington meeting of the conference, and having determined that these proposals shall take the form of a draft international convention, adopts the following draft convention for ratification by the members of the International Labor Organization, in accordance with the labor part of the Treaty of Versailles of June 28, 1919, and of the Treaty of St. Germain of September 10, 1919:

ARTICLE 1. For the purpose of this convention, the term "industrial undertaking" includes particularly:

(a) Mines, quarries, and other works for the extraction of minerals from the earth.

(b) Industries in which articles are manufactured, altered, cleaned, repaired, ornamented, finished, adapted for sale, broken up, or demolished, or in which materials are transformed; including shipbuilding, and the generation, transformation, and transmission of electricity or motive power of any kind.

(c) Construction, reconstruction, maintenance, repair, alteration, or demolition of any building, railway, tramway, harbor, dock, pier, canal, inland waterway, road, tunnel, bridge, viaduct, sewer, drain, well, telegraphic or telephonic installation, electrical undertaking, gas work, waterwork, or other work of construction as well as the preparation for or laying the foundations of any such work or structure.

(d) Transport of passengers or goods by road or rail, including the handling of goods at docks, quays, wharves, and warehouses, but excluding transport by hand.

The competent authority in each country shall define the line of division which separates industry from commerce and agriculture.

ART. 2. Young persons under 18 years of age shall not be employed during the night in any public or private industrial undertaking, or in any branch thereof, other than an undertaking in which only members of the same family are employed, except as hereinafter provided for.

Young persons over the age of 16 may be employed during the night in the following industrial undertakings on work which, by reason of the nature of the process, is required to be carried on continuously day and night:

(a) Manufacture of iron and steel; processes in which reverberatory or regenerative furnaces are used, and galvanizing of sheet metal or wire (except the pickling process).

(b) Glass works.

(c) Manufacture of paper.

(d) Manufacture of raw sugar.

(e) Gold mining reduction work.

ART. 3. For the purpose of this convention, the term "night" signifies a period of at least 11 consecutive hours, including the interval between 10 o'clock in the evening and 5 o'clock in the morning.

In coal and lignite mines work may be carried on in the interval between 10 o'clock in the evening and 5 o'clock in the morning, if an interval of ordinarily 15 hours, and in no case of less than 13 hours, separates two periods of work.

Where night work in the baking industry is prohibited for all workers, the interval between 9 o'clock in the evening and 4 o'clock in the morning may be substituted in the baking industry for the interval between 10 o'clock in the evening and 5 o'clock in the morning.

In those tropical countries in which work is suspended during the middle of the day, the night period may be shorter than 11 hours if compensatory rest is accorded during the day.

ART. 4. The provisions of articles 2 and 3 shall not apply to the night work of young persons between the ages of 16 and 18 years in cases of emergencies which could not have been controlled or foreseen, which are not of a periodical character, and which interfere with the normal working of the industrial undertaking.

ART. 5. In the application of this convention to Japan, until July 1, 1925, article 2 shall apply only to young persons under 15 years of age, and thereafter it shall apply only to young persons under 16 years of age.

ART. 6. In the application of this convention to India, the term "industrial undertakings" shall include only "factories" as defined in the Indian factory act, and article 2 shall not apply to male young persons over 14 years of age.

ART. 7. The prohibition of night work may be suspended by the Government, for young persons between the ages of 16 and 18 years, when in case of serious emergency the public interest demands it.

ART. 8. The formal ratifications of this convention, under the conditions set forth in Part XIII of the Treaty of Versailles of June 28, 1919, and of the Treaty of St. Germain of September 10, 1919, shall be communicated to the secretary general of the League of Nations for registration.

ART. 9. Each member which ratifies this convention engages to apply it to its colonies, protectorates, and possessions which are not fully self-governing:

(a) Except where, owing to the local conditions, its provisions are inapplicable; or

(b) Subject to such modifications as may be necessary to adapt its provisions to local conditions.

Each member shall notify to the International Labor Office the action taken in respect of each of its colonies, protectorates, and possessions which are not fully self-governing.

ART. 10. As soon as the ratification of two members of the International Labor Organization have been registered with the secretariat the secretary general of the League of Nations shall so notify all the members of the International Labor Organization.

ART. 11. This convention shall come into force at the date on which such notification is issued by the secretary general of the League of Nations, and it shall then be binding only upon those members which have registered their ratifications with the secretariat. Thereafter this convention will come into force for any other member at the date on which its ratification is registered with the secretariat.

ART. 12. Each member which ratifies this convention agrees to bring its provisions into operation not later than July 1, 1922, and to take such action as may be necessary to make these provisions effective.

ART. 13. A member which has ratified this convention may denounce it after the expiration of ten years from the date on which the convention first comes into force, by an act communicated to the secretary general of the League of Nations for registration. Such denunciation shall not take effect until one year after the date on which it is registered with the secretariat.

ART. 14. At least once in 10 years the governing body of the International Labor Office shall present to the General Conference a report on the working of this convention, and shall consider the desirability of placing on the agenda of the conference the question of its revision or modification.

ART. 15. The French and English texts of this convention shall both be authentic.

Recommendations Adopted.

Unemployment.

The general conference of the International Labor Organization of the League of Nations, having been convened at Washington by the Government of the United States of America on the 29th day of October, 1919, and having decided upon the adoption of certain proposals with regard to the "question of preventing or providing against unemployment," which is the second item in the agenda for the Washington meeting of the conference, and having determined that these proposals shall take the form of a recommendation, adopts the following recommendation, to be submitted to the members of the International Labor Organization for consideration with a view to effect being given to it by national legislation or otherwise, in accordance with the labor part of the Treaty of Versailles of June 28, 1919, and of the Treaty of St. Germain of September 10, 1919:

I. The general conference recommends that each member of the International Labor Organization take measures to prohibit the establishment of employment agencies which charge fees or which carry on their business for profit. Where such agencies already exist, it is further recommended that they be permitted to operate only under Government licenses, and that all practicable measures be taken to abolish such agencies as soon as possible.

II. The general conference recommends to the members of the International Labor Organization that the recruiting of bodies of workers in one country with a view to their employment in another country should be permitted only

by mutual agreement between the countries concerned and after consultation with employers and workers in each country in the industries concerned.

III. The general conference recommends that each member of the International Labor Organization establish an effective system of unemployment insurance, either through a Government system or through a system of Government subventions to associations whose rules provide for the payment of benefits to their unemployed members.

IV. The general conference recommends that each member of the International Labor Organization coordinate the execution of all work undertaken under public authority, with a view to reserving such work as far as practicable for periods of unemployment and for districts most affected by it.

Reciprocity of Treatment of Foreign Workers.

The general conference of the International Labor Organization of the League of Nations, having been convened at Washington by the Government of the United States of America on the 29th day of October, 1919, and having decided upon the adoption of certain proposals with regard to the "question of preventing or providing against unemployment," which is the second item in the agenda for the Washington meeting of the conference, and having determined that these proposals shall take the form of a recommendation, adopts the following recommendation to be submitted to the members of the International Labor Organization for consideration with a view to effect being given to it by national legislation or otherwise, in accordance with the labor part of the Treaty of Versailles of June 28, 1919, and of the Treaty of St. Germain of September 10, 1919:

The general conference recommends that each member of the International Labor Organization shall, on condition of reciprocity and upon terms to be agreed between the countries concerned, admit the foreign workers (together with their families) employed within its territory, to the benefit of its laws and regulations for the protection of its own workers, as well as to the rights of lawful organization as enjoyed by its own workers.

Prevention of Anthrax.

The general conference of the International Labor Organization of the League of Nations, having been convened at Washington by the Government of the United States of America on the 29th day of October, 1919, and having decided upon the adoption of certain proposals with regard to "women's employment: unhealthy processes," which is part of the third item in the agenda for the Washington meeting of the conference, and having determined that these proposals shall take the form of a recommendation, adopts the following recommendation, to be submitted to the members of the International Labor Organization for consideration with a view to effect being given to it by national legislation or otherwise, in accordance with the labor part of the Treaty of Versailles of June 28, 1919, and of the Treaty of St. Germain of September 10, 1919:

The general conference recommends to the members of the International Labor Organization that arrangements should be made for the disinfection of wool infected with anthrax spores, either in the country exporting such wool or if that is not practicable at the port of entry in the country importing such wool.

Protection of Women and Children Against Lead Poisoning.

The general conference of the International Labor Organization of the League of Nations, having been convened at Washington by the Government of the United States of America on the 29th day of October, 1919, and having decided upon the adoption of certain proposals with regard to "women's and children's employment: unhealthy processes," which is part of the third and fourth items in the agenda for the Washington meeting of the conference, and having determined that these proposals shall take the form of a recommendation, adopts the following recommendation, to be submitted to the members of the International Labor Organization for consideration with a view to effect being given to it by national legislation or otherwise, in accordance with the labor part of the Treaty of Versailles of June 28, 1919, and of the Treaty of St. Germain of September 10, 1919:

The general conference recommends to the members of the International Labor Organization that in view of the danger involved to the function of maternity and to the physical development of children, women and young persons under the age of 18 years be excluded from employment in the following processes:

(a) In furnace work in the reduction of zinc or lead ores.

(b) In the manipulation, treatment, or reduction of ashes containing lead, and in the desilverizing of lead.

(c) In melting lead or old zinc on a large scale.

(d) In the manufacture of solder or alloys containing more than 10 per cent of lead.

(e) In the manufacture of litharge, massicot, red lead, white lead, orange lead, or sulphate, chromate or silicate (frit) of lead.

(f) In mixing and pasting in the manufacture or repair of electric accumulators.

(g) In the cleaning of workrooms where the above processes are carried on.

It is further recommended that the employment of women and young persons under the age of 18 years in processes involving the use of lead compounds be permitted only subject to the following conditions:

(a) Locally applied exhaust ventilation, so as to remove dust and fumes at the point of origin.

(b) Cleanliness of tools and workrooms.

(c) Notification to Government authorities of all cases of lead poisoning, and compensation therefor.

(d) Periodic medical examination of the persons employed in such processes.

(e) Provision of sufficient and suitable cloakroom, washing, and mess-room accommodation, and of special protective clothing.

(f) Prohibition of bringing food or drink into workrooms.

It is further recommended that in industries where soluble lead compounds can be replaced by nontoxic substances, the use of soluble lead compounds should be strictly regulated.

For the purpose of this recommendation, a lead compound should be considered as soluble if it contains more than five per cent of its weight (estimated as metallic lead) soluble in a quarter of one per cent solution of hydrochloric acid.

Establishment of Government Health Services.

The general conference of the International Labor Organization of the League of Nations, having been convened at Washington by the Government of the

United States of America on the 29th day of October, 1919, and having decided upon the adoption of certain proposals with regard to "women's employment: unhealthy processes," which is part of the third item in the agenda for the Washington meeting of the conference, and having determined that these proposals shall take the form of a recommendation, adopts the following recommendation, to be submitted to the members of the International Labor Organization for consideration with a view to effect being given to it by national legislation or otherwise, in accordance with the labor part of the Treaty of Versailles of June 28, 1919, and of the Treaty of St. Germain of September 10, 1919:

The general conference recommends that each member of the International Labor Organization which has not already done so should establish as soon as possible, not only a system of efficient factory inspection, but also in addition thereto a Government service especially charged with the duty of safeguarding the health of the workers, which will keep in touch with the International Labor Office.

White Phosphorus in Manufacture of Matches.

The general conference of the International Labor Organization of the League of Nations, having been convened at Washington by the Government of the United States of America on the 29th day of October, 1919, and having decided upon the adoption of certain proposals with regard to the "extension and application of the international convention adopted at Bern in 1906 on the prohibition of the use of white phosphorus in the manufacture of matches," which is part of the fifth item in the agenda for the Washington meeting of the conference, and having determined that these proposals shall take the form of a recommendation, adopts the following recommendation, to be submitted to the members of the International Labor Organization for consideration with a view to effect being given to it by national legislation or otherwise, in accordance with the labor part of the Treaty of Versailles of June 28, 1919, and of the Treaty of St. Germain of September 10, 1919:

The general conference recommends that each member of the International Labor Organization, which has not already done so, should adhere to the international convention adopted at Bern in 1906 on the prohibition of the use of white phosphorus in the manufacture of matches.

INDUSTRIAL RELATIONS.

Labor: Its Grievances, Protests, and Demands.

[The following declarations, issued under this title, were adopted at a conference of national and international trades-unions, and executives of the four railroad brotherhoods, held at Washington, D. C., Dec. 13, 1919.]

WE speak in the name of millions who work—those who make and use tools—those who furnish the human power necessary for commerce and industry. We speak as part of the Nation and of those things of which we have special knowledge. Our welfare and interest are inseparably bound up with the well-being of the Nation. We are an integral part of the American people and we are organized to work out the welfare of all.

The urgent problems that sorely trouble our Nation and vitally affect us as workers make necessary this special consultation.

The great victories for human freedom must not have been won in vain. They must serve as the instruments and the inspiration for a greater and nobler freedom for all mankind.

Autocratic, political, and corporate industrial and financial influences in our country have sought, and are seeking, to infringe upon and limit the fundamental rights of the wage earners guaranteed by the Constitution of the United States.

Powerful forces are seeking more and more aggressively to deny to wage earners their right to cease work. We denounce these efforts as vicious and destructive of the most precious liberties of our people. The right to cease work—strike—as a final means of enforcing justice from an autocratic control of industry must be maintained.

The autocratic attitude and destructive action of the United States Steel Corporation and its subsidiary branches to oppress the workers by denying them the exercise of their freedom of action, freedom of association, freedom of expression, must give way to a better understanding and relation and to secure the wage earners in the exercise of their rights and liberties as free workers and citizens.

We realize fully all that is involved in the exercise of the right to strike, but only by the exercise of that right can industrial autocrats be compelled to abandon their tyranny and give way to the establishment of freedom and justice in industry.

American labor sets for itself the task, gladly and proudly assumed, to preserve and perpetuate this standard of justice and measure of liberty.

We protest against the attitude and action of the majority of the representatives of the employers in the employers' group who participated in the President's industrial conference October 6-23, 1919.

The proposals which the representatives of labor submitted to that conference were conservative, constructive, and helpful. They were calculated to establish a working basis for the promotion of better relations between employers and workers—the right to organize, the right to collective bargaining through representatives of the workers' own choosing. The representatives of the public constituted as a group indorsed and voted for that principle. By a small majority the employers' group voted against it, and thus the proposals were defeated and the conference failed.

The protection of the rights and interests of wage earners in national, State, and municipal service requires for them the right of organization. Since the interests of these workers can be best promoted through legislation and administration, their right to organization and affiliation with the American Federation of Labor must at all times be fully safeguarded.

The paramount issues that concern all the people of the United States, and in particular the wage earners, are the perversion and the abuse of the writ of injunction and the necessity for full and adequate protection of the voluntary associations of wage earners organized not for profit.

Government by injunction has grown out of the perversion of the injunction process. By the misuse of that process workers have been forbidden to do those things which they have a natural and constitutional right to do.

The injunction as now used is a revolutionary measure which substitutes government by judicial discretion or bias for government by law. It substitutes a trial by one man, a judge, in his discretion, for a trial by jury. This abuse of the injunctive process undermines and destroys the very foundations of our free institutions. It is subversive of the spirit of a free people working out their destiny in an orderly and rational manner.

Because we have reverence for law, because we believe that every citizen must be a guardian of the heritage given us by our fathers who fought for and established freedom and democracy, by every lawful means we must resist the establishment of a practice that would destroy the very spirit of freedom and democracy. Our protest against the abuse of the writ of injunction and its unwarranted application to labor in the exercise of labor's normal activities to realize laudable aspirations is a duty we owe to ourselves and to posterity.

Formerly injunctions issued in labor disputes were of a prohibitive character. Within the recent past this abuse of the injunction writ has been enlarged to include mandatory orders whereby men have been compelled to do specific things which they have a lawful right to refrain from doing.

We declare these abuses in the exercise of the injunction writ are clearly violative of the Constitution and that this issue must be determined definitely in accordance with the guaranties of the Constitution of the United States.

The Right to Strike.

WORKERS are free citizens, not slaves. They have the constitutional right to cease working. The strike is a protest against autocratic management. To penalize strikes or to make them unlawful is to apply an unwarrantable and destructive method when a constructive one is available. To reduce the necessity for strikes, the cause should be found and removed. The Government has a greater obligation in this matter than to use its coercive powers.

Legislation which proposes to make strikes unlawful or to compel the wage earners to submit their grievances or aspirations to courts or to governmental agencies is an invasion of the rights of the wage earners and when enforced makes for industrial serfdom or slavery.

We hold that the Government should supply information, assistance, and counsel, but that it should not attempt by the force of its own power to stifle or to destroy voluntary relations and policies of mutuality between employers and employees.

We specifically denounce the anti-strike provisions of the Cummins bill and all similar proposed legislation as un-American, as being vicious in character, and establishing by legislation involuntary servitude.

The warning given by Jefferson that the danger to the people of this Republic lies in the usurpation by our judiciary of unconstitutional authority, has been fully demonstrated. A judiciary unresponsive to the needs of the time, arrogating to itself powers which neither the Constitution nor the purposes of our laws have conferred upon them, demands that at least in our time Americans must insist upon safeguarding their liberties and the spirit of the sacred institutions of our Republic.

We urge that the judges of our Federal courts shall be elected by the people for terms not exceeding six years.

We assert that there can not be found in the Constitution of the United States or in the discussions of the congress which drafted the Constitution any authority for the Federal courts of our country to declare unconstitutional any act passed by Congress. We call upon

the people of our country to demand that the Congress of the United States shall take action for the purpose of preventing the Federal courts from continuing the usurpation of such authority.

We declare that the voluntary organizations of the workers, organized not for profit, are agencies of human progress and promote justice in industry and trade. Despite legislative declarations that trade-unions do not come under the provisions of antitrust legislation, courts have not understood and are not now able or willing to understand that the organizations of wage earners are not conspiracies in restraint of trade.

We submit that antitrust legislation has not only been interpreted to serve the purpose of outlawing trade-unions, robbing them of their treasuries and the savings of their members and depriving them of their legal and natural rights to the exercise of normal activities, but that it has also failed completely to protect the people against the outrageous machinations of combinations and monopolies.

The United Mine Workers of America did all in their power to avert an industrial controversy in the coal industry. The autocratic attitude of the mine owners was responsible for the losses and sufferings entailed. While the miners have returned to the mines and have only now been afforded the opportunity of having their grievances and demands brought to the light of reason, it is our hope that a full measure of justice will be accorded them even at this late date.

There is a widespread belief that wages should be fixed on a cost-of-living basis. This idea is pernicious and intolerable. It means putting progress in chains and liberty in fetters. It means fixing a standard of living and a standard of life and liberty which must remain fixed. America's workers can not accept that proposition.

They demand a progressively advancing standard of life. They have an abiding faith in a better future for all mankind. They discard and denounce a system of fixing wages solely on the basis of family budgets and bread bills. Workers are entitled not only to a living, but modern society must provide more than what is understood by the term, "a living." It must concede to all workers a fairer reward for their contribution to society, a contribution without which a progressing civilization is impossible.

No factor contributes more to industrial unrest and instability than excessive costs of necessities of life. It is a demonstrated truth that the cost of living has advanced more rapidly than have wages. The claim that increasing wages make necessary increased prices is false. It is intended to throw upon the workers the blame for a process by which all the people have been made to suffer. Labor has been compelled to struggle desperately to keep wages in some measure up to the cost of living. The demand for higher com-

pensation to meet new price levels has made industrial readjustment necessary.

Existing high and excessive prices are due to the present inflation of money and credits, to profiteering by those who manufacture, sell, and market products, and to burdens levied by middlemen and speculators. We urge:

The deflation of currency; prevention of hoarding and unfair price fixing; establishment of cooperative movements operated under the Rochdale system; making accessible all income tax returns and dividend declarations as a direct and truthful means of revealing excessive costs and profits.

The ideal of America should be the organization of industry for service and not for profit alone. The stigma of disgrace should attach to every person who profits unduly at the expense of his fellow men.

Maintenance of Production Essential.

LABOR is fully conscious that the world needs things for use and that standards of life can improve only as production for use and consumption increases. Labor is anxious to work out better methods for industry and demands it be assured that increased productivity will be used for service and not alone for profits.

Wage earners aspire to be something more than numbers on the books of an industrial plant, something more than attendants of a machine, something more than cogs in an industrial system dominated by machinery owned and operated for profit alone. The workers insist upon being masters of themselves.

Labor understands fully that powerful interests to-day are determined to achieve reaction in industry if possible. They seek to disband or cripple the organizations of workers. They seek to reduce wages and thus lower the standard of living. They seek to keep free from restriction their power to manipulate and fix prices. They seek to destroy the democratic impulse of the workers which is bred into their movement by the democracy of the American Republic.

Labor must be and is militant in the struggle to combat these sinister influences and tendencies. Labor will not permit a reduction in the standard of living. It will not consent to reaction toward autocratic control. In this it is performing a public service.

Only in high-wage countries is productivity in industry greatest. Only in high-wage countries do the people enjoy high standards of living. Low-wage countries present the least degree of productivity and offer to their people only low standards of living and restricted liberties. Autocracy always insists upon restricting the income and the activities of workers.

Creative power lies dormant where autocratic management prevails. No employer has a vested right to the good will of his employees. That must be earned, as between men. It can be earned only when management deals with workers as human beings and not as machines. There can not be a full release of productive energy under an autocratic control of industry. There must be a spirit of cooperation and mutuality between employers and workers. We submit that production can be enhanced through the cooperation of management with the trade-union agencies which make for order, discipline, and productivity.

We hold that the organization of wage earners into trade-unions and the establishment of collective bargaining are the first steps toward the proper development of our industrial machinery for service.

To promote further the production of an adequate supply of the world's needs for use and higher standards of life, we urge that there be established cooperation between the scientists of industry and the representatives of organized workers.

Credit is the life blood of modern business. At present, under the control of private financiers, it is administered, not primarily to serve the needs of production, but the desire of financial agencies to levy a toll upon community activity as high as "the traffic will bear."

Credit is inherently social. It should be accorded in proportion to confidence in production possibilities. Credit as now administered does not serve industry but burdens it. It increases unearned incomes at the expense of earned incomes. It is the center of the malevolent forces that corrupt the spirit and purpose of industry.

We urge the organization and use of credit to serve production needs and not to increase the incomes and holdings of financiers. Control over credit should be taken from financiers and should be vested in a public agency, able to administer this power as a public trust in the interests of all the people.

Since the Government has not worked out a constructive railroad policy, we urge for and on behalf of the railway workers and of the general public that the railroads be retained under Government administration for at least two years after January 1, 1920, in order that a thorough test may be made of governmental operation under normal conditions. The common carriers of this country are the arteries of travel, commerce, and industry. Transportation service and rates are intimately bound up with industrial production in all parts of the country. It is essential that a thorough test be given to all phases of railroad control and operation before a definite peacetime policy be finally concluded.

Never has the world been confronted with a more serious situation. Millions are in want, facing starvation. The children of war-stricken

Europe, half fed, underdeveloped, appeal for help. Only with infinite pain, unnecessary loss of life, and slowness of result can Europe rebuild her industries, restore her agriculture, and reestablish her commerce without the help of America.

The treaty setting forth the terms of peace has not been ratified by the United States. Boundaries are not fixed. Peoples are uncertain as to their allegiance. Under such conditions exchange and credit have lost voltage and in turn have paralyzed industry.

As members of an organized labor movement that has for years maintained fraternal relations with the working people of Europe, we feel that our Nation can not with honor and humanity maintain a policy of isolation and disinterestedness from the distress and suffering of the peoples of Europe. Even if the necessity of the peoples of Europe did not have a compelling appeal, the interrelated economic interests of the world would prevent our limiting our attention solely to this hemisphere.

Ratification of Peace Treaty.

THE peace treaty includes provisions in an international agreement to prevent war among nations, with all its cruelties and sacrifices of human life, with its burden of indebtedness and taxation; for reduction in standing armies, the diminution of great navies, and the limitation of the production of arms and ammunition. If the Senate shall fail to ratify the Treaty of Versailles, our Nation may be isolated from other countries of the world which at some time might be pitted against us. Such isolation and possibilities would make necessary the creation and maintenance of a large standing army and a greater and more effective navy in order in some degree to protect the Republic of the United States from aggression by those countries which were our allies in the Great War and which were and are now our friends.

In addition, the workers of America have a deep interest and concern in the labor draft convention of the treaty and in its purposes to raise to a higher standard the conditions of life and labor among the peoples of all countries. Its cardinal declarations and provisions are: That labor should not be regarded as a commodity; that the 8-hour day and 48-hour week are standard; that there shall be one day of rest, preferably Sunday, in each week; that child labor shall be abolished and continuing education for young workers assured; that men and women shall receive equal pay for equal work; that industrial betterments shall be enforced by proper inspection, in which women as well as men shall take part; that wages shall be sufficient to maintain a reasonable standard of living, as this

is understood in each time and country; and that employees as well as employers have the right of association for all lawful purposes.

The United States is protected by this draft convention in two ways: (1) That the recommendations which international labor conferences under the treaty may recommend may be accepted or rejected by our Government; (2) that no recommendation that would set a lower standard for the people of the United States than already exists within our borders can be at any time presented for consideration and action by the United States.

To give the united support of our Republic and of the allied countries to effective machinery to raise the standard of the workers' condition in backward countries, to help humanize industry for the common world weal, is, we insist, a paramount duty which our Republic must perform. We insist, for the reasons herein set forth, that it is the immediate duty of the Senate to ratify the Treaty of Versailles.

The American labor movement resents the attempt of reactionaries and autocrats to classify the men and women of labor with those groups which have nothing in common with its constructive purposes and high ideals and with the fundamental principles of our country. Those who aim to strike a blow against the legitimate aspirations of the workers in their struggle for freedom and for a higher and a better life must be met and overcome.

We call upon all those who contribute service to society in any form to unite in the furtherance of the principles and purposes and for the rectification of the grievances herein set forth. We call especial attention to the fact that there is a great community of interest between all who serve the world. All workers, whether of the city or country, mine or factory, farm or transportation, have a common path to tread and a common goal to gain.

The issues herein enumerated require the action of our people upon both the economic and political field. We urge that every practical action be taken by the American Federation of Labor, with the cooperation of all other organized bodies of workers, farmers, and sympathetic, liberty-loving citizens of the United States, to carry into effect the principles and purposes set forth in the declarations of this conference.

We call upon all to join with us in combating the forces of autocracy, industrial and political, and in the sublime task of ridding the world of the power of those who but debase its processes and corrupt its functions.

In all struggles for justice and human freedom, sacrifices have been made. Having made supreme sacrifices to crush militarism and political autocracy in Europe, America's workers will not surrender to political and industrial autocracy at home. In the struggle now

before us we will contest every effort made to fasten tyranny and injustice upon the people of our Republic. We are confident that freedom, justice, and the opportunity for a better day and a higher life shall be achieved.

The Industrial Courts Act (1919) of Great Britain.

GR^{EAT} Britain has recently legislated into existence permanent machinery for the voluntary arbitration of trade disputes through what is known as the Industrial Courts Act, which became a law November 20, 1919.

The necessity for legislation of this character arose from the prospective termination of the Wages (Temporary Regulation) Act, 1918, on November 21, 1919. Under the terms of this act wages had, since the signing of the armistice, been maintained at a level not lower than that prevailing at that time, unless modified by agreement of the parties concerned or by awards made by the interim court of arbitration, and thus there had been prevented a sudden drop in wages while industry was passing from a war to a peace basis.

The interim court of arbitration, established upon the passing of the Wages (Temporary Regulation) Act, 1918 to continue the work of the committee on production, which fixed wage awards during the war, had been dealing effectively with this stabilization of wages during the period of demobilization. The number of awards made by it in its duration of one year totaled 932, and it had, in addition, acted in an advisory capacity to the Minister of Labor in approximately 45 other matters dealing with wages and conditions of employment. In fact so satisfactory had this temporary measure proved that it seemed advisable to form a permanent body to which industrial disputes could in cases of necessity be referred for settlement, thereby creating among all classes a greater sense of certainty and security regarding industrial affairs. Accordingly the Industrial Courts Act (1919), the text of which follows, was enacted into law to meet this need:

Part I.—Industrial Courts.

1. (1) For the purpose of the settlement of trade disputes in manner provided by this act there shall be a standing industrial court, consisting of persons to be appointed by the Minister of Labor (in this act referred to as "the minister"), of whom some shall be independent persons, some shall be persons representing employers, and some shall be persons representing workmen, and in addition one or more women.

(2) A member of the industrial court shall hold office for such term as may be fixed by the minister at the time of his appointment.

(3) For the purpose of dealing with any matter which may be referred to it, the court shall be constituted of such of the members of the court as the president may direct.

(4) The president of the court, and the chairman of any division of the court, shall be such person, being one of the independent persons aforesaid, as the minister may by order, given either generally or specially, direct.

2. (1) Any trade dispute as defined by this act, whether existing or apprehended, may be reported to the minister by or on behalf of either of the parties to the dispute, and the minister shall thereupon take the matter into his consideration and take such steps as seem to him expedient for promoting a settlement thereof.

(2) Where a trade dispute exists or is apprehended the minister may, subject as hereinafter provided, if he thinks fit and if both parties consent, either—

(a) Refer the matter for settlement to the industrial court; or

(b) Refer the matter for settlement to the arbitration of one or more persons appointed by him; or

(c) Refer the matter for settlement to a board of arbitration consisting of one or more persons nominated by or on behalf of the employers concerned and an equal number of persons nominated by or on behalf of the workmen concerned, and an independent chairman nominated by the minister, and, for the purpose of facilitating the nomination of persons to act as members of a board of arbitration, the Minister of Labor shall constitute panels of persons appearing to him suitable so to act, and women shall be included in the panels.

(3) The minister may refer to the industrial court for advice any matter relating to or arising out of a trade dispute, or trade disputes in general or trade disputes of any class, or any other matter which in his opinion ought to be so referred.

(4) If there are existing in any trade or industry any arrangements for settlement by conciliation or arbitration of disputes in such trade or industry, or any branch thereof, made in pursuance of an agreement between organizations of employers and organizations of workmen representative respectively of substantial proportions of the employers and workmen engaged in that trade or industry, the minister shall not, unless with the consent of both parties to the dispute, and unless and until there has been a failure to obtain a settlement by means of those arrangements, refer the matter for settlement or advice in accordance with the foregoing provisions of this section.

3. (1) The minister may make, or authorize the industrial court to make, rules regulating the procedure of that court, and those rules may, amongst other things, provide for references in certain cases to a single member of the court, and provide for enabling the court to sit in two or more divisions, and to sit with assessors, who may be men or women, for enabling the court or any division of the court to act notwithstanding any vacancy in their number, and for enabling questions as to the interpretation of any award to be settled without any fresh report or reference.

(2) The minister may make rules regulating the procedure to be followed in cases where matters are referred for settlement to the arbitration of one or more persons appointed by the minister.

(3) The Arbitration Act, 1889, shall not apply to any reference to the industrial court, or to any reference to arbitration under this act.

(4) Where the members of the industrial court are unable to agree as to their award, the matter shall be decided by the chairman acting with the full powers of an umpire.

(5) Where any trade dispute referred to the industrial court involves questions as to wages, or as to hours of work, or otherwise as to the terms or conditions of or affecting employment which are regulated by any act other than this act, the court shall not make any award which is inconsistent with the provisions of that act.

Part II.—Courts of Inquiry.

4. (1) Where any trade dispute exists or is apprehended, the minister may, whether or not the dispute is reported to him under Part I of this act, inquire into the causes and circumstances of the dispute, and, if he thinks fit, refer any matters appearing to him to be connected with or relevant to the dispute to a court of inquiry appointed by him for the purpose of such reference, and the court shall, either in public or in private, at their discretion, inquire into the matters referred to them and report thereon to the minister.

(2) A court of inquiry for the purposes of this part of this act (in this act referred to as "a court of inquiry") shall consist of a chairman and such other persons as the minister thinks fit to appoint, or may, if the minister thinks fit, consist of one person appointed by the minister.

(3) A court of inquiry may act notwithstanding any vacancy in their number.

(4) The minister may make rules regulating the procedure of any court of inquiry, including rules as to summoning of witnesses, quorum, and the appointment of committees and enabling the court to call for such documents as the court may determine to be relevant to the subject matter of the inquiry.

(5) A court of inquiry may, if and to such extent as may be authorized by rules made under this section, by order require any person who appears to the court to have any knowledge of the subject matter of the inquiry to furnish, in writing or otherwise, such particulars in relation thereto as the court may require, and, where necessary, to attend before the court and give evidence on oath, and the court may administer or authorize any person to administer an oath for that purpose.

5. (1) A court of inquiry may, if it thinks fit, make interim reports.

(2) Any report of a court of inquiry, and any minority report, shall be laid as soon as may be before both Houses of Parliament.

(3) The minister may, whether before or after any such report has been laid before Parliament, publish or cause to be published from time to time, in such manner as he thinks fit, any information obtained or conclusions arrived at by the court as the result or in the course of their inquiry: *Provided*, That there shall not be included in any report or publication made or authorized by the court or the minister any information obtained by the court in the course of their inquiry as to any trade-union or as to any individual business (whether carried on by a person, firm, or company) which is not available otherwise than through evidence given at the inquiry, except with the consent of the secretary of the trade-union or of the person, firm, or company in question, nor shall any individual member of the court or any person concerned in the inquiry, without such consent, disclose any such information.

Part III.—Continuance of Certain Provisions of the Wages (Temporary Regulation) Act, 1918.

6. (1) The provisions of the Wages (Temporary Regulation) Act, 1918, which are specified in the schedule to this act shall, subject to the modifications specified in the second column of that schedule, continue in operation until the 30th day of September, 1920.

(2) Where, before the passing of this act, any matter has been referred for settlement under the Wages (Temporary Regulation) Act, 1918, and has not, at that date, been settled by the person or persons to whom it has been so referred, the minister may by order transfer the matter to the industrial court, and where any such matter is so transferred the award of that court shall have effect as if it were an award of the interim court of arbitration made under that act.

Part IV.—General.

7. Any expenses incurred by the minister in carrying this act into operation, including the expenses of the industrial court and of any court of inquiry, shall be paid out of moneys provided by Parliament.

8. For the purposes of this act—

The expression "trade dispute" means any dispute or difference between employers and workmen, or between workmen and workmen connected with the employment or nonemployment, or the terms of the employment or with the conditions of labor of any person:

The expression "workman" means any person who has entered into or works under a contract with an employer whether the contract be by way of manual labor, clerical work, or otherwise, be expressed or implied, oral or in writing, and whether it be a contract of service or of apprenticeship or a contract personally to execute any work or labor.

9. Provision shall be made by rules under this act with respect to the cases in which persons may appear by counsel or solicitor on proceedings under this act before the industrial court, before an arbitrator, or before a court of inquiry, and except as provided by those rules no person shall be entitled to appear on any such proceedings by counsel or solicitor.

10. This act shall not apply to persons in the naval, military, or air services of the Crown, but otherwise shall apply to workmen employed by or under the Crown in the same manner as if they were employed by or under a private person.

11. In the case of a trade dispute in the industry of agriculture, steps to be taken under this act by the minister of labor shall be taken in conjunction with the board of agriculture and fisheries.

12. (1) In the application of this act to Scotland a reference to an oversman shall be substituted for any reference to an umpire, and a reference to the board of agriculture for Scotland shall be substituted for any reference to the board of agriculture and fisheries.

(2) In the application of this act to Ireland, a reference to the department of agriculture and technical instruction for Ireland shall be substituted for any reference to the board of agriculture and fisheries.

13. The minister shall from time to time present to Parliament a report of his proceedings under this act.

14. This act may be cited as the Industrial Courts Act, 1919.

Schedule.

Provisions continued in force.

Modifications.

SEC. 1 (obligation to pay prescribed rates of wages).	As from the commencement of this act the power to substitute any enforceable rate for the prescribed rate shall cease, without prejudice, however, to the enforceability of any rate substituted for the prescribed rate before the commencement of this act, whether the
--	--

substituted rate has or has not come into operation before that date, and without prejudice to the enforceability of any rate substituted for the prescribed rate by an award of the industrial court under Part III of this act.

SUBSEC. (2) of section 2 (settlement of differences).

As from the commencement of this act matters instead of being referred for settlement as provided in subsection (2) shall be referred to the industrial court.

The words "or as to whether any rate should be substituted for the prescribed rate" shall cease to have effect, and the proviso to subsection (2) shall not apply.

SEC. 3 (powers of inquiry).

SEC. 4 (definition of prescribed rates of wages).

SEC. 5 (legal proceedings).

As from the commencement of this act a reference to the industrial court shall be substituted for any reference to the interim court of arbitration.

Comments on the Act.

THE three main provisions of the act are:

(a) The creation in place of the interim court of arbitration of a permanent court of arbitration called the industrial court, to which industrial disputes may be referred if both parties concerned consent.

(b) The proposed appointment of a court of inquiry which shall make immediate investigation of any existing or apprehended dispute and give an impartial report of its merits to the public.

(c) The continuance of the Wages (Temporary Regulation) Act, 1918, until September 30, 1920.

Attention should be called to the fact that the arbitration, as provided for in the act, is purely voluntary on the part of the parties concerned. It is expected that it will be used only after all available means of settlement already existing between employers and employees have proved futile. At the insistence of labor no nonstrike clause was inserted in the act and its effect will therefore be to prevent, not to prohibit, strikes.

The court of inquiry, while it may call for the production of all documents and compel the attendance of witnesses in securing facts regarding a labor dispute, can not publish any information elicited in the inquiry "which is not available otherwise than through evidence given at the inquiry, except with the consent of the secretary of the trade-union or of the person, firm, or company in question, nor shall any individual member of the court or any person concerned in the inquiry, without such consent, disclose any such information." This provision, while doubtless necessary to protect firms and labor organizations in particular matters which they prefer should not become public, may in a measure limit the character of the report which is made to the public.

A continuation of the Wages (Temporary Regulation) Act should win the approval of labor, since, in stabilizing wages generally until arrangements can be made for putting them on a permanent basis, it also guarantees against reduction of women's wages in the near future.

Wide latitude is given the Minister of Labor in the establishment of the industrial court and of the courts of inquiry. In the case of the industrial court he appoints the personnel, the only restriction being that it shall consist of men and women representing the public, the employers, and the workers. The length of office of the members of the industrial court is also fixed by him. As regards courts of inquiry the minister may appoint any person or persons, as he thinks fit.

According to an official source¹ the court, while normally sitting in London, will make arrangements, where necessary, to hear cases at Glasgow, Newcastle, Manchester, Cardiff, and other important centers. It will also send individual members to hear cases locally, in which an immediate hearing is desired and which can be heard by one member of the court.

The following persons appointed by the Minister of Labor as the first members of the court are thus described in the *Manchester Guardian*, December 6, 1919, page 12:

Mr. William Mackenzie, since 1917 has been one of the chairmen of the committee on production and the interim court of arbitration. He has acted as arbitrator and conciliator in many industrial disputes for some years.

Mr. F. H. McLeod is the director of labor statistics of the ministry of labor, and formerly held that position under the Board of Trade. He has been the editor of the *Labour Gazette* for many years.

Mr. D. C. Cummings was general secretary of the Boilermakers' Society for nine years before entering the service of the Board of Trade and later the ministry of labor (as a labor adviser).

Mr. McKie Bryce is the secretary of the Engineering and National Employers' Federation, and of the employers' side of the provisional joint committee of the National Industrial Conference.

Mr. E. J. Brown is a director and past president of the London Master Builders' Association, and past president of the Institute of Builders.

Mr. F. S. Button was a member of the executive committee of the Amalgamated Society of Engineers, and in 1917 became a member of the committee on production and later of the interim court.

Miss Violet Markham (Mrs. James Carruthers) served as a deputy director in the women's section of the National Service Department in 1917.

Miss Cécile Matheson is lady warden of the Woodbrooke Settlement, Birmingham, and has been an appointed member of trade boards since 1914.

¹ *Labour Gazette*, London, December, 1919, p. 514.

The New Franco-Italian Labor Treaty.¹

THE negotiations for the conclusion of a new labor treaty between France and Italy resulted in the signing on September 30, 1919, of a compact which will be submitted for ratification to the parliaments of the respective countries. The treaty provides that the workers of either country, when employed in the other, shall be on the same footing as nationals with respect to labor conditions and shall enjoy the same benefits with reference to relief and social insurance.² The full text of the treaty (with the exception of its preamble) is translated.

Text of the Treaty.

ARTICLE 1. The two Governments agree to grant all administrative facilities to citizens of either of the two countries who intend to go to the other country for the purpose of working there.

With the reservation of temporary abrogations provided for in article 4 and the harmonizing of its own laws and regulations with the facilities which it has obligated itself to grant in the preceding paragraph, the country of origin shall not require any special authorization for the emigration of workers and their families, be it either individual or voluntary, or for the purpose of collective hiring.

These workers and their families shall be at liberty to enter the country of their destination which shall not require any special authorization for this purpose, with the reservation of temporary abrogations provided for in article 4 and the harmonizing of its own laws and regulations with the facilities which it has obligated itself to grant in paragraph one of the present article.

Wages and Working and Living Conditions.

ART. 2. The wages of immigrant workers shall not be lower than those received in the same undertaking and for equal work by native workers of the same occupational group, or, if native workers of this group are not employed in the same undertaking, they shall not be lower than the normal wages current in the district for workers of the same group.

The Government of the country of immigration obligates itself to see to it that within its territory the equality of wages of immigrant and native labor is observed.

ART. 3. Immigrant workers shall enjoy the same protection of the legislation and usages of the country as native workers with respect to working and living conditions.

All complaints of immigrant workers concerning the working and living conditions provided for them by employers or any other complaint requiring intervention of the public authorities shall be addressed or transmitted to the proper local authorities either directly or through the diplomatic or consular authorities. The proper local authorities shall make the necessary investigations and shall alone be competent to intervene.

¹ Bollettino dell'Ufficio del Lavoro. Rome, Nov. 16, 1919.

² For a discussion of European labor treaties in general, see the MONTHLY LABOR REVIEW for April, 1919, pp. 7-10.

Each of the two Governments may attach to its embassy in the other country a technical specialist charged with taking care of all labor matters and with maintaining relations with the proper central administrative authorities of the countries in which workers of the other country are being employed.

The two Governments shall facilitate the exercise of the functions of these attachés.

Stabilization of Labor Market.

ART. 4. If, at certain times, in certain districts and in certain occupations, the condition of the labor market should make it impossible to find employment for emigrants who individually and voluntarily come in quest of work, the interested Government shall through diplomatic channels immediately advise the Government of the other country thereof so that the latter may take the required measures.

The two Governments may by joint agreement examine correlative measures which with the same object in view could be adopted by each of the two countries.

ART. 5. The Governments of the two countries shall jointly see to it that the number of workers hired by means of a collective contract shall not injuriously affect the economic development of one of the two countries or the workers of the other country.

For this purpose they shall establish a commission which as a rule shall meet twice a year at Paris.

The respective representatives on this commission shall in particular be charged with (1) estimating approximately the number of workers that could possibly be hired and what number of workers it seems desirable to hire up to the next session of the commission; (2) indicating the districts to which the immigrant workers should preferably be directed and those to which owing to the prevailing condition of the labor market immigrant workers should not be directed. With this object in view each of the two States reserves to itself the right to consult the interested employers' and workers' organizations within its territory.

In order to assure the regular functioning of these administrative authorities, which in application of the internal laws of each of the two countries are charged with facilitating to emigrants passage of the border, the proper administrative authorities shall jointly determine those measures which are made necessary by existing conditions, and harmonize them as much as possible with the application of the respective laws and regulations.

Social Insurance.

ART. 7. The pension system for industrial and agricultural workers (inclusive of the special pension funds for miners) in force in each of the two countries shall be applied to citizens of the other country without any exclusion or reduction of the rights granted to nationals, but with reservation of the provisions made below concerning the computation and payment of the complementary pension and the State subsidy.

The advantages provided for in the present article shall be granted to insured persons who shall claim and obtain their pensions subsequent to the date of the coming into force of the present treaty. The same advantages shall be granted to widows and orphans whose claims shall arise subsequent to that date.

The following rules shall be applicable to complementary and State grants:

(a) The contributory periods and those considered as contributory periods which in accordance with the law are being computed either in Italy or in France shall be added for the purpose of determining the right to a pension.

(b) Each of the two States shall compute the amount of the pension to which the insured person would be entitled according to its rates, its law and the conditions required by the latter, for the entire time reckoned according to the provision of the preceding paragraph. Each State shall then determine the part of the pension to be borne by it, reducing the total amount previously determined in proportion to the period of time which concerns it.

The total of the quotas to be borne by each of the two States represents the amount of the pension to which the insured person is entitled.

In case, however, that the pension computed in this manner should amount to less than the pension which would be due from one of the two countries in accordance with its own law and by reason of the contributory periods or periods considered as contributory periods, elapsed within its territory the part of the pension to be borne by that State shall be increased by the difference.

The preceding rules are applicable to the quota of invalidity pensions to be borne by each State.

Death benefits in case of death of the insured person shall be payable to his survivors provided that these have submitted a claim within six months of his death. The two States shall share in the payment of these benefits in accordance with the rules laid down for pensions and State grants.

The agreements provided for in article 24 shall prescribe how the principles relating to rates of pensions and State grants shall be applied.

The relations between the Italian and French insurance carriers, the information which these must furnish to each other to make possible the keeping of individual accounts for insured nationals of the other country during the maturing and at the time of the liquidation of their pensions, and the necessary measures for facilitation, in accordance with the Franco-Italian agreement of April 5, 1904, of the payment in France through the French funds or the post-office department of the pensions due from Italian insurance carriers, and vice versa, shall be determined by the agreements provided for in article 24.

ART. 8. The principles of reciprocity already realized in the matter of compensation for industrial accidents is confirmed by the present treaty and shall be applicable to any possible development of the respective legislation.

The same principles shall, under conditions to be laid down in special agreements, be extended to all social insurance laws, covering various risks, such as sickness, invalidity, and unemployment, which may be enacted in the future.

Acquisition of Land.

ART. 9. In all matters relating to the acquisition, possession, and transfer of small rural and urban holdings the citizens of each of the two States shall in the territory of the other State enjoy the same rights and privileges granted to nationals, with the exception, however, of privileges granted for war service and with reservation of provisions which in the interest of national security were enacted for specified zones or localities in the laws on the right of residence and settlement of aliens.

Charitable Aid.

ART. 10. Italian workers and entrepreneurs who have become members of a French mutual aid society may become members of the administrative board

with the reservation that the number of alien members of the board shall not exceed one-half less one of the total membership of the board.

Italians residing in France who have become members of a mutual aid society approved or recognized as a public welfare society shall enjoy the benefits of the State subsidies to the pensions accruing from contributions as evidenced by individual pass books and shall have a right to pensions accruing from the common funds.

These provisions shall be applied reciprocally to French citizens living in Italy.

ART. 11. Subsidies to mutual unemployment benefit funds as well as subsidies furnished by public unemployment funds and aid given by public institutions through furnishing of work must be granted in each of the two States to the nationals of the other State.

ART. 12. Citizens of each of the two States who, owing to physical or mental sickness, pregnancy, or confinement, or for any other reason require aid, medical treatment, or any other assistance shall within the territory of the other signatory State, in the application of the laws on social aid, receive the same treatment as nationals with respect to aid at their home or in a medical institution.

Citizens of each of the two States shall be entitled in the other State to subsidies for the maintenance of their families, which shall have the character of simple relief, if their families live with them.

ART. 13. Expenditures for aid incurred by the State of residence shall not involve a claim to any refund on the part of the State, Department, Province, commune, or public institution of the country of which the person aided is a citizen, provided that such aid has become necessary owing to an acute disease pronounced as such by the attending physician.

In other cases, inclusive of relapses, claims to refund for the period of aid subsequent to the first 45 days shall be admissible.

ART. 14. The State of residence shall also continue to bear the burden of relief without refund—

1. In the case of maintenance either at their homes or in hospitals of aged, infirm, and incurable persons who have continuously resided for at least 15 years in the country in which they were admitted to the benefits of a pension, aid, or free admission to a home for the aged. This period shall be reduced by five years in cases of invalidity caused by one of the industrial diseases enumerated in a list contained in one of the agreements provided for in article 24.

2. In the case of all sick, insane, and all other persons aided who have continuously resided in the said country for five years. In case of curative treatment for a disease a worker who during said period has resided in the country at least five consecutive months during each year shall be considered as having resided there continuously.

With respect to children under 16 years of age it shall be sufficient if their father, mother, guardian, or the person in whose custody they are, fulfill the above conditions.

ART. 15. After the elapse of 45 days persons who have received relief and do not fulfill the requirements as to residence laid down in the preceding article shall, according to the choice of the State in which they claim citizenship and after notification by the State in which they reside, be either repatriated if they are in a condition to be transported or the costs of their medical care must be refunded by their State to the State in which they are residing. Repatriation shall not be enforced in the case of special relief of families with numerous children or of women in confinement.

ART. 16. The two Governments shall by means of agreements provided for in article 24 jointly regulate the details of the administrative measures relating (1) to the procedure, conditions, and form of the repatriation, and (2) the method of establishing and computing the duration of continuous residence.

The notices by the State of residence provided for in article 15 must reach the authorities of the State of domicile designated in the said agreement during the first 10 days of the period of 45 days; otherwise this period shall be extended by the entire duration of the delay.

The two Governments obligate themselves to see to it that in localities where large numbers of workers of the other nationality are gathered accommodations for hospital treatment for sick or injured workers and their families shall not be lacking.

Contributions which for this purpose may be imposed upon or voluntarily borne by employers shall not have the character of such special taxes on the employment of foreign labor as are prohibited below in article 21.

If the workers are assured of medical care at their homes, in hospitals, and infirmaries by their employer and at the latter's expense, they shall have a right to such treatment without refund of the costs.

Refunds claimable from the State of domicile in pursuance of the preceding article 15 shall not be demanded if the aforesaid expenditures are borne voluntarily by the employer or by reason of a clause in the labor contract.

This provision shall also be applicable if the costs are paid by a benevolent society or in any other way.

ART. 17. Benevolent, relief, and aid societies of Italian citizens in France and of French citizens in Italy, and societies in both countries having members of both nationalities which are organized and administered in accordance with the laws of the country, shall enjoy the same rights and privileges that are granted to French and Italian societies of the same character.

Arbitration Boards and Labor Laws.

ART. 18. Workers and employers of the two countries may become members of boards of conciliation and arbitration for the settlement of collective disputes between employers and employees in which they are interested.

If Italian workers of a mining establishment have chosen from among their fellow workers in the same establishment a delegate who shall submit their demands with respect to labor conditions either to the employers, or to miners' delegates, or to the authorities charged with the supervision of labor, the said French authorities shall extend facilities to the delegate for the exercise of the functions intrusted to him by his fellow workers; the same shall reciprocally apply to French miners in Italy.

ART. 19. Citizens of each of the two contracting parties shall in the territory of the other party enjoy equal treatment with nationals in all matters relating to the application of laws regulating labor conditions and assuring the hygiene and safety of workers.

This principle of equal treatment shall also be extended to any regulations of such matters promulgated in the two countries in the future.

Protection of Children and Adult Workers.

ART. 20. The commission composed of French and Italian citizens provided for in the Franco-Italian convention of June 15, 1910, for the protection of children and eventually of adult workers shall, in those district in which workers of the other country are employed in a sufficiently large number,

extend its protective activities to workers of all ages, be they Italian workers in France, or French workers in Italy. From now on they shall be composed as follows: (1) The prefect or subprefect, or a councilor of the prefecture; (2) the mayor of the commune or a communal councilor; (3) the factory inspector or one of his assistants; (4) the consul or his representative; (5) the president of a mutual aid, educational, or relief society of the other nation, or if such a society does not exist, a citizen of the other country residing in the district; (6) one representative each of the employers' and workers' organizations of the district; (7) one worker of each of the two nationalities.

Taxes.

ART. 21. Neither of the two signatory States shall impose special taxes on citizens of the other State by reason of their working in its territory.

This provision shall not prejudice the provisions of laws and regulations relating to general taxes imposed on aliens and in particular the taxes on the issuance of permits of residence. The same provision shall not be construed as exempting citizens of one of the signatory States who reside in the territory of the other State from any other tax, present and future, applicable to nationals of the country of residence.

ART. 22. The principle of equality of treatment of citizens of the two countries, with respect to admission to the public primary schools and to the establishment of private schools, having been sufficiently established in principle in each of the two countries by the respective school laws, the two Governments reserve to themselves the negotiation of a general convention relating to education and to include therein the measures required for the facilitation of elementary and vocational education of immigrant workers and their families.

Seamen and Fishermen.

ART. 23. One or more special conventions shall regulate in the spirit of the present treaty the situation of seamen, fishermen, and, in general, of the wage-working personnel of the fishing industry and of the merchant marine. Negotiations with this end in view shall begin, at the latest, during the year following the ratification of the present treaty.

It shall, however, be considered as agreed upon for the present that a system of pensions in the spirit of the conditions laid down in article 7 shall form the subject of one of the agreements to be concluded in pursuance of the provisions of article 24.

ART. 24. The proper administrative authorities of the two countries shall jointly determine measures concerning the details and the services required for the carrying out of those provisions contained in the present treaty which require the cooperation of the respective administrative authorities. They shall also determine the instances and conditions under which they shall carry on direct correspondence between themselves.

ART. 25. As the present treaty is not fully applicable to colonies, possessions, and protectorates, the two Governments obligate themselves to enter into negotiations, possibly during the year following the ratification of the present treaty, for the purpose of concluding one or more special conventions relating to their respective colonies, possessions, and protectorates which will regulate the matters dealt with by the present treaty in conformity with the principles and spirit of the latter.

ART. 26. The present treaty shall be ratified and ratifications shall be exchanged at Paris at the earliest possible time.

It shall become effective on the exchange of ratifications.

It shall be in force for one year and its renewal from year to year shall be implied unless notice denouncing it is given.

All disputes relating to the application of the present treaty shall be settled through diplomatic channels.

If a settlement can not be arrived at in this way, the said disputes shall, on demand of only one of the parties, be submitted to the decision of one or more arbitrators whose duty it shall be to settle the dispute in conformity with the fundamental principles and the spirit of the present treaty.

A special agreement shall regulate the constitution and the functions of the arbitration board. Each of the two parties may in the way of testimony submit an opinion rendered by international offices or organs competent in the matter.

Such an opinion may for the same purpose be jointly requested by the arbitrators.

Hungarian Industry Under the Soviet System.

THE Neue Freie Presse¹ publishes reports from two well-known Hungarian manufacturers on their experiences during the supremacy of the soviet system in Hungary.

Koloman Kando, managing director of an engineering and ship-building firm, makes the following statement:

The bluffing tactics which culminated in the reconciliation of the Hungarian socialists with the communists did not come as a surprise to those who had been in touch with the men employed in large plants and factories during the last weeks of Karolyi's term of power. Since the beginning of 1919 it was quite clear that a great part of the organized workers were drifting toward communism. At the shipbuilding yard of Ganz & Co., at Fiume, there was a revolt, which resulted in the director and most of the heads of departments being driven out. Similar occurrences had to be recorded at the Budapest factories of the company. Even at Fiume it became obvious that the outbreak had been organized at Budapest. In Budapest, workers' councils, which sought to take over the management of the factories, were formed to displace the directors and managers. The workers elected a new administration and demanded its recognition by the Government.

Thus, for months before the formal proclamation of a soviet republic, a sort of soviet management had been introduced into the factories. What happened on March 21, 1919, was merely the giving of a formal sanction to a system already in operation, the former owners of factories, who had been deprived of control, being expropriated. If anybody drew the attention of workers to the risk of what was being done he was told that nobody but the shareholders suffered damage. The workers asserted that they would take care that the factories should remain available for production and that they would soon acquire sufficient skill and knowledge to carry on work without the assistance of capitalists. As a matter of fact, factory workers did organize an armed guard for the protection of factories; and in the recent critical days scarcely any material damage was done to the buildings and plant.

¹Neue Freie Presse. Vienna, Sept. 13, 1919.

The fact that the business of the factories collapsed financially is to be ascribed chiefly to the tremendous decrease of output. This decrease, in turn, is attributable to three causes: (1) The complete lack of discipline; (2) the extravagant increase of wages; and (3) the abolition of piecework. It was quite in vain that the production commissioner appointed by the soviet government endeavored to restore discipline. The workers were fully conscious that the Government itself depended on their support. The foremen, who had to deal with discipline at first hand, had not the slightest disposition to bring the workmen back to sensible courses; for they knew that if they made any remark, however inoffensive it might be, they would be hustled out of the factory. While the wages paid in October, 1918, were more than 4 times those paid before the outbreak of the war, they were raised just before the collapse of the soviet régime to 11 times the peace-time wages. It is interesting to compare the annual increase of wages and salaries with the course of dividends paid by Ganz & Co. The increase of wages and salaries from 1914 to 1915 and from 1915 to 1916 were more than double the amount of the dividend for the previous year. After 1916 these increases amounted to 5 or 6 times as much. In these circumstances the possibility of continuing operations without loss became a pressing question. As the principal purchaser of manufactured goods, the State agreed to the principle that prices should be raised in due proportion to the advance of wages. As regards private purchasers, a system of "standard prices" was introduced. By this system prices were to be fixed arbitrarily after the occurrence of a dispute. True, this system enabled manufacturers to shift the burden of high wages to the shoulders of consumers; but, so far as the workpeople were concerned, it put employers in a very awkward position. They were deprived of their most effective protection against exorbitant demands for higher wages; for they could no longer declare that they were unable to pay higher wages without ruining the concern.

The rising wage curve is an index of the growing consciousness of power among workers. Even the leaders of the trade-unions have observed the advance of wage rates with some anxiety. One of them, who played a conspicuous rôle during the régime of the soviets, told me once, in January, 1918, that the present tremendous advances caused him sleepless nights and that he had very anxious forebodings in regard to the time when reductions shall have become unavoidable. But the caution and prudence of the men's leaders are of no practical use. They are no longer real leaders of the masses. Very often, even against their sincere convictions, they have to put forward the most extravagant demands.

Industrial conditions were made still worse by the abolition of piecework, and the payment of wages at time rates to all workers. Output sank suddenly to a fraction of the normal. In our car-building yard one gang of workmen used to construct eight skeleton cars per week. When time rates were introduced the output sank to four and even to three, wages having been multiplied by 11. This reduction of output was equivalent to multiplying the normal cost of production by 25.

Obviously the communistic administrators concerned became heavily indebted to the banks. The soviet government tried to overcome this difficulty by fixing arbitrary prices for products. Thus, the price of a steam plow, completely equipped, was fixed at 1,500,000 crowns,¹ though the price was only 80,000 crowns before the war and not more than 250,000 crowns even in January, 1919. Nobody who understands figures will require any further comment.

¹ Owing to the fluctuations in the value of the Austrian crown conversions are not made into American money. Normally the par value of the Austrian crown is 20.3 cents.

Dr. Franz Chorin, general manager of a coal mining company, contributed the following observations:

The soviet administration has had disastrous consequences for the coal-mining industry. The workers' councils were utterly unable to maintain discipline among their comrades. The miners came to work with extreme irregularity, and a continuous shrinkage of output resulted. The Government made some efforts to promote larger output. Commissioners visited various mines and works and admonished the men to turn out more products. But their speeches had no effect, for the speakers had neither authority nor influence. Continuous increases of wages were conceded and a minimum rate was fixed, the result being a continuous diminution of output.

It became almost impossible to procure the supplies of tools and other materials necessary for mining. The issue of paper money added to the difficulties. Without any hesitation, workmen refused to accept it. Owing entirely to the prudence of works managers, armed conflicts were avoided. No serious damage has been done to the collieries, and therefore the financial disaster is not quite beyond remedy. The moral damage, however, is very heavy. Although the workers have become calm and sober, they are still under the influence of the events of the last few months. Without time and care it will not be possible to bring them back to orderly activity.

Socialization of the Austrian Shoe Industry.

THE Austrian Government decided on September 20, 1919, to establish a socialized establishment under the name "Associated Leather and Shoe Factories" (*Bereinigte Leder- und Schuhfabriken*).¹ This puts into practice for the first time the law concerning socialized undertakings, passed by the national assembly on July 29, 1919, and regulating the legal form of socialized concerns. It is the first practical step toward the socialization of an important branch of industry.²

The new concern will be formed jointly by the State, the Wholesale Purchase Co. of the cooperative societies as representative of urban consumers, and the Agricultural Produce Trading Association representing rural consumers. The State will hand over to the new undertaking the leather works at Brünn and the boot and shoe factory at Mittendorf, which were State-owned during the war, and a factory building in Vienna to which the plant from the Mittendorf factory will be removed. The Wholesale Purchasing Co. and the Agricultural Trading Association will furnish the capital for the undertaking.

The enterprise will be managed by a board comprised of three State representatives (one from the Ministry of Finance and two from

¹ Arbeiter Zeitung. Vienna, Sept. 21, 1919.

² For other socialization measures in Austria see MONTHLY LABOR REVIEW for November, 1919, pp. 71-85.

the Ministry of Trade and Commerce); three members each from the Cooperative Wholesale Purchase Co. and the Agricultural Trading Association; four representatives of the manual workers and salaried employees of whom three will be chosen by the works council and one by the trade-union of workers in the boot and shoe industry; and one member of the business management, which will be appointed by the board. The establishment will, therefore, be directed entirely by representatives of the State, the consumers, and the workers; no capitalist will take any part in the control.

The net profits of the undertaking will be allotted as follows: One-quarter to the manual workers and salaried employees; one-quarter to the State; and one-quarter each to the two cooperative associations. The workers' share will be handed over to the works council, which will decide independently as to its disposal.

The undertaking will have an important effect on the shoe industry. Quite recently there has been an attempt to form a capitalistic trust under the directorship of the General Austrian Shoe Co. There is no doubt that the shoe industry must be centralized, if it is not to succumb to foreign competition. But centralization must be carried out, not by a capitalist monopoly, but in the interests of consumers and workers. This will be the task of the new enterprise, which will be the largest in the industry. About 900,000 pairs of boots and shoes should be produced yearly in the two factories. This represents one-third of the present production and one-seventh of the normal demand. It will aim also at bringing other undertakings in the boot and shoe and leather industries under its control. It is hoped to form a further joint concern in collaboration with the provincial government of Styria, by taking over the boot and shoe factory at Gosting. Furthermore large private concerns are to be converted into companies managed on socialized lines.

PRICES AND COST OF LIVING.

Retail Prices of Food in the United States.

RETAIL prices of food are secured by the Bureau of Labor Statistics from retail dealers in 50 cities through monthly reports of actual selling prices on the 15th of each month. These reports represent many thousands of sales to housewives in each of the 50 cities. Prices of 43 food articles¹ are now reported monthly by retail dealers, and prices of storage eggs are secured in January, February, October, November, and December. Quotations are secured on similar grades of commodities in all cities. There are, however, some local differences which must be taken into consideration when any comparison is made of the prices in the different cities.

1. The cut of beef known as "sirloin" in Boston, Mass.; Manchester, N. H.; Philadelphia, Pa.; and Providence, R. I., would be known as "porterhouse" in other cities. In these four cities, owing to the method of dividing the round from the loin, there is no cut that corresponds to "sirloin" in other cities. There is also a greater amount of trimming demanded by the trade in these cities than in others. This is particularly true of Providence, R. I.

2. In Boston, Mass.; Fall River, Mass.; Manchester, N. H.; New Haven, Conn.; Portland, Me.; and Providence, R. I., very little fresh plate beef is sold, and prices are not secured from these cities for this article.

3. The most of the sales in Newark, N. J., are on whole ham instead of the sliced, as in other cities.

There are also other local factors which should be taken into consideration. The cities for which prices are shown are widely separated; some are in localities near the source of supply while others are a greater distance from it, making it necessary to add to the prices a greater amount for transportation. Methods and costs of doing

¹ Retail prices for the 23 food articles given below have been secured each month since January, 1913: Sirloin steak, round steak, rib roast, chuck roast, plate beef, pork chops, bacon, ham, lamb, lard, hens, flour corn meal, eggs, butter, milk, bread, potatoes, sugar, cheese, rice, coffee, and tea.

In addition to the 23 articles listed above, monthly prices have been secured for the following five articles since January, 1915: Canned salmon, navy beans, onions, prunes, and raisins.

Monthly retail prices have been secured since January, 1919, for the following 15 articles: Evaporated milk, oleomargarine, nut margarine, Crisco, rolled oats, corn flakes, Cream of Wheat, macaroni, cabbage, baked beans, canned corn, canned peas, canned tomatoes, bananas, and oranges.

Prices for storage eggs have been secured for January, February, November, and December only of each year including 1919, when prices were secured for October also.

business vary greatly in different localities due to the demands of customers, rentals, wages, and other fixed charges or expenses.

In addition to food prices, the following retail prices are secured from each of the 50 cities listed on page 66:

(a) Prices of coal are secured semiannually, and published in the March and September issues of the MONTHLY LABOR REVIEW.

(b) Prices of gas are secured annually and published in the June issue of the MONTHLY LABOR REVIEW.

(c) Prices of dry goods are secured quarterly and published in the April, July, October, and December issues of the MONTHLY LABOR REVIEW.

Statements that prices decreased in December are not borne out by the statistics of food prices compiled by the Bureau of Labor Statistics from these reports of actual sales prices sent in by retail dealers. These figures show that the retail cost of 22 articles of food in December was the highest ever attained, being more than 2 per cent higher than in November, 1919, 5 per cent higher than in December, 1918, and 89 per cent higher than in December, 1913. These comparisons are based on actual retail prices of 22 of the most essential foods,¹ weighted according to the consumption of the average family.

During the month from November 15 to December 15, 22 of the 44 articles of food for which prices were secured in 1919 increased as follows: Cabbage, 36 per cent; onions, 17 per cent; granulated sugar, 16 per cent; strictly fresh eggs, 11 per cent; Cream of Wheat and potatoes, 10 per cent each; raisins, 5 per cent; flour, 4 per cent; butter and storage eggs, 3 per cent each; fresh milk and canned salmon, 2 per cent each; lamb, evaporated milk, oleomargarine, cheese, macaroni, rice, canned peas, and bananas, 1 per cent each. Rib roast and chuck roast increased less than five-tenths of 1 per cent each. The 12 articles which decreased in price were: Pork chops, 10 per cent; lard and oranges, 4 per cent each; tea and prunes, 3 per cent each; sirloin steak, round steak, bacon, ham, navy beans, 1 per cent each; and hens and Crisco, less than five-tenths of 1 per cent. Plate beef, nut margarine, bread, corn meal, rolled oats, corn flakes, baked beans, canned corn, canned tomatoes, and coffee remained the same in price as in November.

During the year period from December, 1918, to December, 1919, 19 of the 29 articles for which prices were secured on both dates increased as follows: Onions, 108 per cent; prunes, 53 per cent; coffee, 51 per cent; raisins, 48 per cent; potatoes and granulated sugar, 34 per cent each; rice, 27 per cent; canned salmon, 16 per cent; flour, 15

¹ See first paragraph of note 1, p. 57. This comparison is based on all the articles for which prices have been secured each month since 1913, weighted according to the consumption of the average family. Lamb, for which the Bureau has no consumption figures, is not included in this comparison.

per cent; strictly fresh eggs, 11 per cent; storage eggs, 9 per cent; butter, 7 per cent; fresh milk, 6 per cent; bread, 4 per cent; corn meal and tea, 3 per cent each; hens and lard, 2 per cent each; and cheese, 1 per cent. Articles which decreased in price during the year were: Navy beans, 21 per cent; plate beef, 18 per cent; bacon, 14 per cent; chuck roast, 11 per cent; pork chops, 8 per cent; ham and round steak, 6 per cent each; rib roast, 5 per cent; sirloin steak, 3 per cent; and lamb, 2 per cent.

Table 1 gives average retail prices for December 15, 1919 and 1918, and November 15, 1919, together with the per cent of increase or decrease on December 15, 1919, compared with December 15, 1918, and November 15, 1919.

³ Increase of less than five-tenths of 1 per cent.

⁴ Decrease of less than five-tenths of 1 per cent.

⁵ See first paragraph of note 1, page 57; lamb is not included.

Relative Retail Prices of 22 Articles of Food.

IN TABLE 3 the average monthly and yearly prices of 22 food articles¹ are shown as relative prices or *percentages* of the average prices for the year 1913. These relatives are computed by dividing the average price of each commodity for each month and each year by the average price of that commodity for 1913. The relative prices or percentages are computed to enable the reader more readily to grasp the *per cent* of change in the prices of an article. Relative prices must be used with caution, however. For example, the relative price of pork chops in November, 1919, was 200, which means that the money price was 200 per cent of the money price in 1913 or, in other words, the price doubled. The relative price of pork chops in December was 181, showing a drop of 19 points since November. This is not a drop of 19 per cent. It is a drop of 19 points from 200, which is a decrease of only 9.5 per cent.

In the last column of this table are given index numbers showing the changes by months and years in the retail cost of the 22 food articles weighted according to the importance of each article in the consumption of the average family. To aid the general reader, a brief description of the method used to compute these index numbers is given. The average price per unit of each commodity is multiplied by the number of units of that commodity consumed by the average family. The products are the cost to the average family of each of the 22 food articles. These products for each month and year are added. The aggregates thus obtained give the cost to the average family for each month and year of the 22 food articles. These aggregates show the actual money cost of the family market basket for each month and year. It would be very difficult to see at a glance the percentage changes in the cost of the family market basket from these aggregate money costs. The aggregates are therefore changed to percentages of the aggregate cost for the year 1913 by dividing each aggregate by the 1913 aggregate. The principle is the same as that used in converting the money prices of individual articles into relatives or percentages of the 1913 prices. The percentages thus obtained are called index numbers. They show what the cost of the family market basket is in each month and year in percentages of the cost of the same market basket in the year 1913. Since index numbers are merely relatives or percentages of the prices of a group of commodities, they must be used with all the caution required in the use of relative prices in general. Prices are obtained each month for 43 food articles, but only 22 of these articles are included in the retail food price index because the amounts consumed by the average family have been obtained as yet for only these 22 articles. These

¹ See first paragraph of note 1, p. 57. Lamb is not included.

articles comprise about two-thirds of the entire food budget of the average family and reflect with great accuracy *changes* in the cost of the food budget.

From September, 1915, there has been a steady increase in the cost of these 22 articles of food. In December, 1918, the cost of these foods was 87 per cent above the 1913 average. In January, 1919, there was a slight decline. February prices declined 7 per cent, but from that date until June the prices advanced. In June there was a decline of less than five-tenths of one per cent. July prices increased 3 per cent. August prices showed a further increase of 1 per cent, reaching the highest level up to that date. In September there was a decrease of 2 per cent; in October, a further decrease of two-tenths of 1 per cent, but in November, there was an increase of more than 2 per cent, which brought the cost up to the previous high-water mark in August. In December there was a further increase of 2.6 per cent. This made the cost in December of these 22 food articles 2.6 per cent higher than ever before. Using the average cost in the year 1913 as the base, or 100, the relative figure representing the December cost was 197, or an increase of 97 per cent over the year 1913.

TABLE 3.—RELATIVE RETAIL PRICES OF THE PRINCIPAL ARTICLES OF FOOD IN THE UNITED STATES, 1907, TO DECEMBER, 1919.

Year and month.	Sirloin steak.	Round steak.	Rib roast.	Chuck roast.	Plate beef.	Pork chops.	Bacon.	Ham.	Lard.	Hens.	Eggs.	Butter.	Cheese.	Milk.	Bread.	Flour.	Corn meal.	Rice.	Potatoes.	Sugar.	Coffee.	Tea.	22 weight-ed arti-cles.

The curve shown in the chart on page 67 pictures more readily to the eye the changes in the cost of the family market basket and the trend in the cost of the food budget than do the index numbers given in the table. The chart has been drawn on the logarithmic scale¹ because the percentages of increase or decrease are more accurately shown than on the arithmetic scale.

Retail Prices of Food in 50 Cities on Specified Dates.

AVERAGE retail food prices are shown in Table 4 for 19 cities for November and December, 1919, and for December of each year, 1913, 1914, 1917, and 1918. These cities are as follows:

Atlanta, Ga.	Denver, Colo.	Pittsburgh, Pa.
Baltimore, Md.	Detroit, Mich.	St. Louis, Mo.
Birmingham, Ala.	Los Angeles, Calif.	San Francisco, Calif.
Boston, Mass.	Milwaukee, Wis.	Seattle, Wash.
Buffalo, N. Y.	New Orleans, La.	Washington, D. C.
Chicago, Ill.	New York, N. Y.	
Cleveland, Ohio.	Philadelphia, Pa.	

In Table 5, average prices are shown for November and December, 1919, for 31 other cities as follows:

Bridgeport, Conn.	Little Rock, Ark.	Portland, Me.
Butte, Mont.	Louisville, Ky.	Portland, Oreg.
Charleston, S. C.	Manchester, N. H.	Providence, R. I.
Cincinnati, Ohio.	Memphis, Tenn.	Richmond, Va.
Columbus, Ohio.	Minneapolis, Minn.	Rochester, N. Y.
Dallas, Tex.	Mobile, Ala.	St. Paul, Minn.
Fall River, Mass.	Newark, N. J.	Salt Lake City, Utah.
Houston, Tex.	New Haven, Conn.	Scranton, Pa.
Indianapolis, Ind.	Norfolk, Va.	Springfield, Ill.
Jacksonville, Fla.	Omaha, Nebr.	
Kansas City, Mo.	Peoria, Ill.	

¹ For discussion of the logarithmic chart, see article on "Comparison of arithmetic and ratio charts," by Lucien W. Chaney, MONTHLY LABOR REVIEW for March, 1919, pp. 20-34. Also, The "Ratio" Chart, by Prof. Irving Fisher, reprinted from Quarterly Publications of the American Statistical Association, June, 1917, 24 pages.

TREND IN RETAIL PRICES OF 22 FOOD ARTICLES, COMBINED, FOR THE UNITED STATES, BY MONTHS, JANUARY, 1913, TO DECEMBER, 1919.

[Average for 1913 = 100.]

TABLE 4.—AVERAGE RETAIL PRICES OF THE PRINCIPAL ARTICLES OF FOOD

Comparison of Retail Food Costs in 50 Cities.

THE table following shows for 39 cities the percentage of increase or decrease in the retail cost of 22 food articles,¹ combined, in December, 1919, as compared with the average cost in the year 1913, in December, 1918, and in November, 1919. For 11 other cities, comparisons are given for the one-year and the one-month periods. These cities have been scheduled by the Bureau at different dates since 1913.

The average family expenditure is based on the prices sent to the Bureau each month by retail dealers, and on the average family consumption of these articles in each city.

The amounts given as the expenditures in December, 1918, and in November and December, 1919, represent the amounts necessary to buy a year's supply of these 22 food articles when purchased at the average retail prices charged in the months specified. This method makes it easier to ascertain the increase over the year 1913. The year 1913 has been selected for the comparison because it was the last year before the war, when prices were normal.

No attempt should be made in this table to compare one city with another, as the average number of persons in the family varies from city to city, and these 22 food articles represent a varying proportion of the entire food budgets according to locality. This table is intended merely to show comparisons in the retail cost of these 22 food articles for each city.

As may be seen in Table 6, the average family expenditure for 22 articles of food¹ increased in December in all but 4 of the 50 cities. In Fall River, Boston, Norfolk, and Richmond, the decrease was less than five-tenths of 1 per cent. In Baltimore, Manchester, and Portland, Me., the increase was less than five-tenths of 1 per cent. In 8 cities, the expenditure increased 1 per cent each; in 18 cities, 2 per cent each; and in 12 cities, 3 per cent each. In Atlanta and Scranton, the increase was 4 per cent, and in Minneapolis, Omaha, and St. Paul, 5 per cent. During the year period from December, 1918, to December, 1919, the three cities showing the greatest increases were Minneapolis, 14 per cent; Omaha, 12 per cent; and Mobile, 10 per cent. Baltimore decreased 2 per cent and was the only city which showed a decrease as compared with December, 1918. As compared with the average expenditure in the year 1913, the following cities showed an increase of 100 per cent and over: Richmond and Providence, 100 per cent each; Buffalo, 101 per cent; Atlanta, 102 per cent; Milwaukee and Washington, 103 per cent each; St. Louis, 104

¹ See first paragraph of note 1, page 57; lamb is not included.

per cent; Charleston, Memphis, and Minneapolis, 105 per cent each; Detroit, 106 per cent; Omaha, 108 per cent; and Birmingham, 109 per cent.

TABLE G.—RETAIL COST OF 22 FOOD ARTICLES,¹ COMBINED, IN DECEMBER, 1919, COMPARED WITH THE COST IN NOVEMBER, 1919, DECEMBER, 1918, AND WITH THE AVERAGE COST IN THE YEAR 1913, BY CITIES.

¹ See first paragraph of note 1, page 57; lamb is not included.

² Cost of year's supply at prices charged in specified months.

³ Decrease.

⁴ Increase of less than five-tenths of 1 per cent.

⁵ Decrease of less than five-tenths of 1 per cent.

Retail Price Changes in Great Britain.

THE following table gives for Great Britain the increase in the cost of food and general family expenditure by years, January, 1915 to 1919, and by months, January, 1919, to January, 1920, inclusive, over July, 1914. The food items included in this report are: Ribs and thin flank of beef, both British and chilled or frozen; legs and breast of mutton, British and chilled or frozen; bacon, fish, flour, bread, tea, sugar, milk; butter, fresh and salt; cheese, margarine, eggs, and potatoes.

The table gives percentages of increase, and is not one of relative prices, as is the table given for the United States. When making comparisons this should be borne in mind, and to obtain the relative price it is necessary to add 100 to the percentage as given, i. e., January, 1919, the increase is 130, the relative price being 230.

The figures represent two comparisons: First, the increase in price based on the same quantities as used in July, 1914; second, the increase in the cost of living, based on the change in the quality of the standard of living. In other words, the increase in column one of the table shows what the wage earner paid for the same quantities of food, while the figures in column two give the change that results from a substitution of one kind of food for another to meet wartime conditions.

The same method is used in family expenditures, the third column showing percentage of increase of all articles and the last column giving approximate figures, based on the increase in cost of all articles and the estimated changes in consumption of food.

INCREASE IN FOOD AND ALL ITEMS IN GREAT BRITAIN, BASED ON JULY, 1914.

[Compiled from the British Labour Gazette.]

Year and month.	Per cent of increase as compared with July, 1914.			
	Food.		All items in family budget.	
	Retail prices, assuming same quantities.	Expenditures, allowing for estimated changes in consumption.	Retail prices, assuming same quantities.	Expenditures, allowing for estimated changes in consumption.

1920.				
January.	136	115	125	115

¹ Approximate increase if standard of consumption is changed as follows: Eggs omitted, margarine substituted for butter; sugar and fish consumption cut one-half.

² Not including taxes.

³ Based on change in standard of food consumption adopted by the Ministry of Food.

⁴ The increase, excluding additional taxation, is 7 per cent less.

⁵ The increase, excluding additional taxation, is 6 per cent less.

Index Numbers of Wholesale Prices in the United States, 1913, to December, 1919.

A FURTHER large increase in wholesale prices in the United States is shown by the Bureau's weighted index number for December, which stands at 238 as compared with 230 for November and 223 for October, the average for the year 1913 being regarded as 100. Food products furnished one of the most notable instances of price increase from November to December, the index number rising from 219 to 234, or nearly 7 per cent. The group of lumber and building materials showed an even greater increase, its index number advancing from 236 to 253, or more than 7 per cent. In the remaining groups farm products increased from 240 to 244, cloths and clothing from 325 to 335, and metals and metal products from 164 to 169. Somewhat smaller increases were recorded for chemicals and drugs (176 to 179), and house-furnishing goods (299 to 303). The fuel and lighting group showed an increase of only 2 points, from 179 to 181, while in the group of miscellaneous commodities no change in the general price level took place.

The striking increase in the index number for the group of food products is due in large measure to the considerable increases that took place in December in the wholesale prices of eggs, wheat and rye flour, milk, potatoes, and particularly raw and granulated sugar. All of these commodities, owing to their importance, are quite heavily weighted in calculating the Bureau's index number. At New York the price of 96° centrifugal sugar averaged 41 per cent higher in December than in the preceding month. Granulated sugar was 23 per cent higher, eggs from 16 to 20 per cent higher, and potatoes 15 per cent higher in December than in November. In the group of lumber and building materials a number of important articles averaged from 12 to 14 per cent higher in price.

Among other important commodities showing increased prices are cotton, flaxseed, wheat, barley, oats, rye, hay, sheep, tobacco, butter, corn meal, hams, lamb and mutton, molasses, vinegar, cotton and woolen goods, silk, coke, crude and refined petroleum, pig iron, pig lead, silver, steel, pig tin, spelter, brick, lumber, plate glass, shingles, lead carbonate, linseed oil, ammonia, glycerine, quinine, wooden furniture, bran, and lubricating oil.

Some articles, as corn, cattle, hides, hogs, peanuts, cheese, coffee, fruits, bacon, lard, tallow, sole leather, copper, and cottonseed meal and oil were cheaper in December, while beef, beans, canned goods, fish, oleomargarine, salt, tea, wool, coal, matches, gasoline, iron ore, lime, cement, glass and earthen ware, jute, paper, rope, rubber, soap, and wood pulp showed practically no change in price.

In the following table the complete series of index numbers for each group of commodities and for all commodities combined is shown for each month of the 7-year period, 1913 to 1919, inclusive:¹

¹ This table is published quarterly, in the February, May, August, and November issues of the MONTHLY LABOR REVIEW. A somewhat abridged table of index numbers is published in other issues.

INDEX NUMBERS OF WHOLESALE PRICES BY GROUPS OF COMMODITIES AND BY MONTHS, 1913 TO 1919.

¹ Preliminary.

In order that a comparison of wholesale price trends over the entire period since 1890 may be obtained, the following table is presented. These yearly index numbers are constructed in the same manner as the monthly figures shown in the preceding table and are directly comparable therewith:

INDEX NUMBERS OF WHOLESALE PRICES, 1890 to 1918, BY GROUPS OF COMMODITIES.

[1913=100.]

Year.	Farm products.	Food, etc.	Cloths and clothing.	Fuel and lighting.	Metals and metal products.	Lumber and building materials.	Chemicals and drugs.	House furnishing goods.	Miscellaneous.	All commodities.

Changes in Wholesale Prices in the United States.

INCREASES in the wholesale price of many important commodities in the United States during the last quarter of 1919 are shown by information collected in representative markets by the Bureau of Labor Statistics. Among the articles showing an increase are sheep, mutton, salt pork, butter, eggs, milk, wheat and wheat flour, corn and corn meal, oats, rye and rye flour, barley, rice, potatoes, sugar, cotton and cotton goods, wool and woolen goods, shoes, coke, iron and steel products, spelter, and crude petroleum.

On the other hand, some articles, as cattle, salt beef, hogs, lard, hides, sole leather, bituminous coal, copper and copper wire, and pig tin decreased in price during the quarter, while bacon, hams, anthracite coal, tin plate, refined petroleum, and gasoline showed practically no change in price.

Comparing prices in December with those in January, 1919, it is seen that butter, eggs, wheat and wheat flour, corn, oats, rye and rye flour, barley, rice, potatoes, sugar, cotton and cotton goods, wool, hides, leather, shoes, anthracite coal, coke, iron and steel products, pig lead, spelter, and crude and refined petroleum averaged higher in price. Cattle, beef, hogs, bacon, hams, sheep, mutton, milk, corn meal, electrolytic copper, copper wire, tin plate, and pig tin were lower in December than in January. Gasoline and bituminous coal showed practically no difference in price for these two months.

Average money prices.

Improbability of Decrease in Prices and Cost of Living.

By ROYAL MEEKER, COMMISSIONER OF LABOR STATISTICS.

EVERYBODY is anxiously watching the course of prices and even more anxiously inquiring when, if ever, prices are coming down. The wish is father to the thought, and it is easy for the housewife to accept any statement that prices are slated for a fall in the near future.

Before attempting to answer the query as to when, if ever, prices are to fall, it would be well to consider the causes which have brought about the remarkable rise in prices since 1915. These causes may be summarized as follows:

1. By far the most important cause of increased prices is the enormous additions to the circulating medium, money and its substitutes, during the past four years;

2. Decrease in the actual physical quantities of goods produced and exchanged;

3. Manufacture for and purchase by the Governments of the world for war and other purposes; and

4. Changes in the demands for and the supply of goods and services.

If prices are to be lowered, the causes operating to boost prices must be attacked. The amount of money and checks in circulation must be appreciably reduced and the quantities of necessary goods must be increased in amount. The stocks of commodities manufactured on Government account must, so far as possible, be salvaged and thrown upon the market. The extraordinary demands for goods new and old must either be curtailed or production of these goods expanded to meet the needs.

The financing of the war has made two dollars grow where but one dollar grew before. This, coupled with the fact that there has been an enormous destruction of economic goods and of the farms, mines, forests, and factories supplying these goods, explains the enormous and world-wide decrease in the purchasing power (value) of money, which causes increased prices. As long as the people have twice as many dollars with which to buy a smaller number of commodities, prices are bound to remain high. It will take a long time to deflate the world's inflated currencies or to inflate the world's deflated supply of goods. The profiteer is being blamed on all hands for the increase in prices. Undoubtedly, profiteering of a most reprehensible sort has existed and does exist today, but the profiteer is a result of ever-increasing prices rather than a cause thereof. His

influence in boosting prices is negligible. If all the profiteers in the world could be apprehended and thrown into jail or lined up and shot, it would have no appreciable influence upon prices.

It has been suggested that the abnormally high prices are psychological in origin and that prices will fall just as soon as the people can be made to think falling prices. Of course, psychology is involved in every price, but the larger quantities of currency and the smaller amounts of commodities are physical facts that no psychic legerdemain can overcome.

Higher Prices Possible.

I SEE no prospect of any considerable fall in prices for several years to come. It will be impossible for the Governments of the world to pay off their debts very rapidly. On the contrary, there is every reason to apprehend that credits must be issued to foreign Governments, foreign manufacturers, and foreign business men, in order to rehabilitate the broken and shattered industries of Europe. This being the case, we may expect that larger volumes of checks and credit instruments will be thrown into circulation, thus boosting prices still higher. If it is impossible to reduce the volume of the world's indebtedness suddenly, it is even more impossible to increase the quantity of the world's goods suddenly. Of course, the world's productive forces are being marshaled as rapidly as possibly in order to increase the production from farms, forests, mines, and factories, but this is necessarily a slow process, especially in these times of great business instability and labor unrest. The 1919 farm crops have practically all been marketed. The only way that prices can be brought down before next year's crops begin to find their way to market is through deflation of the currency. As pointed out above, still further inflations are inevitable if Europe is to rehabilitate her industries so that she can increase her supply of material goods and thus bring about lower prices by increasing goods and decreasing debts.

Some business men are apprehensive that the United States will be flooded with European-made goods which will bring prices tumbling down. The price of foreign exchange at the present moment is such as to make it highly profitable for American business men to buy large quantities of goods in Europe, especially in Germany and Austria, if European countries only had the goods to sell. Not until Europe has rehabilitated its industries may we expect to have our markets flooded with European goods. That puts off the tumble in prices several years. The normal seasonal drop in prices may be expected in 1920. This seasonal drop comes much earlier than is

generally supposed. In normal times the low-price level for all commodities combined comes in March, April, or May. These seasonal price changes are relatively small and will have but little effect upon the housewives' expenditures. No great and sudden fall in prices seems possible for a long time.

People generally are yearning so intently for lower prices that they have not thought much about the results of falling prices. The prices we kicked about in 1913 have come to be regarded as ideal. Untold distress has been caused by the rapid price increases of the past four years. The sufferings already endured by the people through rising prices will be multiplied tenfold if prices drop within the next seven years to the 1913 level. A period of falling prices is always a time of business depression, failures, and unemployment.

Production should be speeded up to the limit and debts should be paid not with more debts but with economic goods and services. These processes should be set in motion without delay. It will require several years to readjust industry and trade on a firm basis again. In the meantime, the United States Government should, in my judgment, join with the other leading Governments of the world in the creation of an international commission to study ways and means of setting up a true and relatively constant standard of value to displace the present monetary units which are merely units of weight and consequently variable in value or purchasing power. The most important constructive work that can be done in any field is the establishment of a stable standard of value, so that all the people, rich and poor, employer and employee, bondholder and stockholder, may be spared for all time the agonies of changing price levels.

Retail Prices in Belgium.¹

IN THE October number of the *Revue du Travail* comparative retail prices of household necessities in Belgium are published. The prices given are for Brussels and Antwerp, the capital and the commercial metropolis, respectively, and 10 communes of the central district, an industrial section. These 10 communes on December 31, 1913, had a population of 92,471. According to the industrial census of December 10, 1910, 25,711 or 27.8 per cent of the total population of the district were engaged in industrial occupations.

Data were furnished by the more important cooperative associations in the district and by various commercial firms established prior to 1914. Prices are given for 46 articles.

¹ *Revue du Travail*, Royaume de Belgique. Brussels, Oct. 15, 1919.

The following table gives index numbers for the 46 articles, by three general classes and by months. January to September, 1919, based on prices of April, 1914:

INDEX NUMBERS OF RETAIL PRICES OF 46 ARTICLES, IN BELGIUM, JANUARY TO SEPTEMBER, 1919.

[Prices April, 1914=100.] -

¹ The normal par value of the franc is 19.3 cen^t

There has been but little variation in prices since May. Roast beef declined from 12 francs per kilo in May to 11 francs in June, and to 10 francs in July. Soap was higher in June by five-tenths of a franc than in May, but lower in September than at any time in 1919. Prices of clothing and hosiery have remained practically stationary since April.

Bread and pork are the only articles for which prices in September were higher than in January. Since January, 1919, coffee has declined 38.9 per cent; rice, 35.4 per cent; table salt, 40 per cent; roast beef, 23.1 per cent; boiling beef, 37.5 per cent; eggs, 44 per cent; men's suits, 41.8 per cent; and men's shoes, 62.2 per cent.

Rent has remained stationary through the entire period.

Prices of Food and Fuel in Norway in 1914, 1917, 1918, and 1919.

THE United States consul general at Christiania reports¹ that an official estimate places the increase in the cost of necessities of life at 175 per cent in the period from July, 1914, to June, 1919, and that prices in July, 1919, increased about 2 per cent over the June prices. This estimate includes rent, taxes, clothing, fuel, and the staple foodstuffs. It is stated that the cost of foodstuffs alone has not increased materially since May, 1919. In this connection the consul general transmits the following table of average market quotations for 21 principal cities in Norway, issued by the Bureau of Statistics (official) at Christiania:

¹ United States Department of Commerce. Commerce Reports, Dec. 26, 1919, p. 1742.

WAGES AND HOURS OF LABOR.

Hours and Earnings in the Hosiery and Underwear and Silk Industries.

THE industrial survey made by the Bureau of Labor Statistics early in 1919¹ included an investigation of hours and earnings in the hosiery and underwear and silk industries. A summary presentation of the results of this investigation is given in this article, particularly in Table 4.

The data for the silk industry, except so far as it relates to silk throwing or to the dyeing of silk goods, was obtained only from establishments engaged in the manufacture of broad silks or ribbon silks. The States included in the survey of the two industries covered by this article, the number of establishments, and the number employees listed in each State are shown in the following table:

Total.....	1,448	137,637	51	16,093	879	102,856	33	9,363

¹ A brief summary of this survey appeared in the MONTHLY LABOR REVIEW for September, 1919 (pp. 176-189), and articles dealing with specific industries have appeared in subsequent issues, except November.

It was not possible to arrange the survey in such a way as to obtain the records of all establishments in an industry for the same pay-roll period. Industry was in a very unsettled state during the progress of the survey. Conditions changed so rapidly that the exact date of the material presented is a matter of more importance than it would be in a normal year. The pay-roll periods included in each industry were distributed by months as shown in the following table:

TABLE 2.—NUMBER OF PAY-ROLL PERIODS IN SPECIFIED MONTHS.

Industry.	Total number of pay-roll periods.	Number of pay-roll periods in—								
		1918				1919				
		Sept.	Oct.	Nov.	Dec.	Jan.	Feb.	Mar.	Apr.	May.
Hosiery and underwear.....	51				4	9	5	17	12	4
Silk.....	33	1			15	13	2	2		

It will be seen that in the hosiery and underwear industry 43 of the 51 schedules covered pay-roll periods in the first 4 months of 1919; in the silk industry 28 of the 33 schedules fell in December, 1918, and January, 1919. The material is presented as of the year 1919. So far as could be ascertained no change in rates of pay occurred in either industry during the progress of the survey.

The information concerning hours and earnings on which the tables are based was obtained directly from the pay rolls or other records of the companies by agents of the Bureau. Other information was obtained from responsible officials in personal interviews. Wherever the records of the company failed to indicate the time actually worked by pieceworkers during the selected pay-roll period, arrangements were made to have such a record kept for a future period. In all cases the figures copied by the agents represented the hours actually worked and earnings actually received.

Method of Making Computations.

AS THE material comes in to the office the figures for hours and those for earnings are both in incommensurable form on account of inequalities in the length of pay-roll periods and in the time worked by different individual employees. Before they can be presented in tabular form it is necessary to reduce both hours and earnings to a common denominator. The comparable figures selected for use in the following tables are hours worked per day and per week, and earnings per hour and per week. These figures are obtained in the following manner:

The hours per day of each employee are obtained by dividing the number of hours worked by him during the pay-roll period by the number of week days, holidays omitted, in the pay-roll period. Thus in the case of pay rolls for a single week containing no holidays, the hours worked by each employee during the pay-roll period are divided by six, whether the employee worked on each of the six days or not. Similarly the hours actually worked by an employee in any establishment during a pay-roll period containing 13 workdays were divided by 13, regardless of the number of days on which the employee worked. The resulting figure represents the number of hours per day that the employee would have worked if his time had been distributed uniformly among the week days of the pay-roll period.

All one-week pay rolls included in the survey of these industries were six-day pay rolls. The half monthly periods, however, showed considerable differences in length. The following table shows for each industry the number of schedules covering each specified number of workdays:

TABLE 3.—SCHEDULE DISTRIBUTION BY NUMBER OF WORK DAYS IN PAY-ROLL PERIOD.

Industry.	Number of schedules in pay-roll period covering—			
	One week or 6 work days.	Two weeks, one- half month, or—		Total number of sched- ules.
		12 work- days.	13 work- days.	
Hosiery and underwear	33	14	4	51
Silk	5	28	—	33
Total	38	42	4	84

It will be seen from this table that in the hosiery and underwear industry there is a great preponderance of one-week pay-roll periods, with two-week pay-roll periods in second place, whereas in the silk industry the situation is reversed, with 82 per cent in the 12-day column.

By using the average number of hours per week day as a factor it is possible to obtain a figure for the average number of hours worked per week by multiplying that factor in every case by 6. With one-week pay rolls the result represents approximately the original figure for hours per week actually worked. Such variations as are found are due to the fact that the average hours per day as given in the table are the averages of the hours of individual employees, with no weight to represent the proportion of the pay-roll period worked by different individuals.

In the case of longer pay rolls, however, the resulting figure is hypothetical. It represents the number of hours per week that the employees would have worked in a six-day week if their working hours had been distributed uniformly over the week days of the entire pay-roll period.

This figure of hours worked per week is no more useful for comparisons of hours in different occupations or industries than is the figure of hours per day. It has the advantage, however, of enabling comparisons to be drawn between the hours actually worked on the average by people in each occupation and the full-time hours of the same occupation.

By full-time hours per week is meant the number of hours that is thought of in the occupation as constituting a normal week's work—the number of hours the employee regularly expects to work and the employer expects him to work. This figure was obtained from the officials of the various establishments by agents of the Bureau. The difference between average actual hours per week and average full-time hours per week is an indication of the degree of irregularity of employment among the employees to whom the figures apply.

Combining hours per day or hours per week computed from the records of one-week pay rolls with those computed from longer pay rolls diminishes slightly the comparability of the resulting averages. The nature and extent of this influence have been pointed out at some length in a previous article on the results of the industrial survey.¹ The effect of this influence is not sufficiently great, however, to prevent the use of the figures for average hours per day or per week as the basis of general comparisons between different industries, occupations, or localities.

For comparative purposes the earnings of each employee are reduced to the form of average earnings per hour by dividing his total earnings for the pay-roll period by the total number of hours worked by him during the period. The resulting figure indicates how much he would have earned each hour he worked if his earnings had been distributed uniformly over all the hours actually worked by him during the period.

By multiplying the average hourly earnings of a group by the previously computed average hours per week worked by the same group, a figure is obtained which represents very closely the average actual weekly earnings of the group. In the case of one-week pay rolls this process brings us back practically to the average actual earnings for the week as computed.

In one respect the figure for actual weekly earnings computed in the manner just described falls short of mathematical exactness. It

¹ See MONTHLY LABOR REVIEW for January, 1920, pp. 121 and 122.

is assumed in computing weekly earnings in this manner that employees work the same number of hours on Saturday as on other week days. If in fact the hours on Saturday are fewer than the hours on other week days, the earnings thus computed will be exact only for those employees for whom Saturdays constitute exactly one-sixth of the total number of days worked by them. Careful experiment has shown, however, that the variations so nearly offset one another that the net result is a departure of a few cents at the most from theoretical accuracy.

In the detailed table which follows it has been necessary to omit a number of occupations owing to space limitations. In the hosiery and underwear industry 8 occupations have been included out of a total of 14 for whom data were obtained in the survey. In addition a number of occupations have been combined for present purposes which have been given separately in previous reports on the same industries. The selected occupations include 14,660 employees out of a total of 16,093 for whom information was obtained. In the silk industry the table covers seven occupations out of a total of 12, and 7,719 employees out of a total of 9,363.

The last previous investigation made by the Bureau into labor conditions in the hosiery and underwear and the silk industries were carried out in the year 1914. The following table gives relative hours and earnings for selected occupations in the two industries for which the Bureau had the necessary data. The figures for 1913 are in all cases used as the base. The comparison is necessarily confined to those occupations for which the requisite information in comparable form is at hand.

Method of Computing Industry Relative.

THE table also gives a relative (or index number) for each industry as a whole. It seems desirable to point out certain features of the method by which these relatives were computed. In the first place the averages of hours and earnings on which the 1919 relative is based cover only selected occupations. In earlier years the relatives have been based on all wage-earning employees found in the establishments visited. The employees who did not fall within any of the selected occupations were grouped in the tables under the caption "Other employees." This was done not because of any value that was supposed to attach to figures for this heterogeneous group, but because it was feared that the omission of these employees might seriously affect the averages for the industry as a whole. Careful experiments carried out by the Bureau indicate that, if the selected occupations include low-paid groups, such as laborers, in proportion to their numbers in the industry, the omission of "other employees" has little effect upon industry averages.

In the second place it should be stated that the industry averages given in the table are based on all of the occupations listed in the several industries and not on those to which limitations of space made it necessary to confine the detailed tables already presented. The total number of selected occupations used in computing the industry relative was 14 in the hosiery and underwear industry and 11 in the silk industry.

Furthermore, no attempt has been made to base the relatives on data from identical establishments. With the changes that the lapse of time since the last investigation has brought about in the different establishments, the plan of confining the comparison to data from identical establishments would have two disadvantages. It would in some cases seriously limit the numbers on which the comparative figures are based; in other cases it might give undue weight to changes in hours and earnings taking place in one or another of the limited number of establishments covered when those changes did not reflect conditions in the industry as a whole. The present rela-

tives are based on the entire body of information available for each year for which a relative is shown.

Finally the effect of bonuses and of extra pay for overtime in increasing hourly earnings has been carefully noted and every effort has been put forth to make the full-time weekly earnings represent exactly what the employees would earn by working the full-time hours of the occupation and no more. For that purpose not only has the extra pay for overtime been eliminated but also every bonus which it required overtime work to secure. On the other hand attendance bonuses and others which could be earned in regular time have been included in the hourly rates from which full-time earnings were computed.

TABLE 5.—RELATIVE FULL-TIME HOURS PER WEEK, EARNINGS PER HOUR, AND FULL-TIME WEEKLY EARNINGS, 1913, 1914, AND 1919, IN THE HOSIERY AND UNDERWEAR AND SILK INDUSTRIES, BY OCCUPATION, SEX, AND YEAR.

The industrial survey covered eight industries for which the Bureau had material on hand for the calculation of industry relatives. That the increases in earnings in the industries included in this report may be compared with increases in the other six industries, the relatives of each industry are given in the following table:

TABLE 6.—RELATIVE EARNINGS PER HOUR IN EIGHT INDUSTRIES, 1913 TO 1919.
[1913=100.]

Year.	Cigars.	Clothing, men's.	Furniture.	Hosiery and underwear.	Iron and steel.	Lumber.	Mill-work.	Silk goods.
1913.....	100	100	100	100	100	100	100	100
1914.....	(¹)	(¹)	(¹)	103	103	(¹)	(¹)	100
1915.....	(¹)	(¹)	103	(¹)	101	91	99	(¹)
1916.....	(¹)	(¹)	(¹)	(¹)	(¹)	(¹)	(¹)	(¹)
1917.....	(¹)	(¹)	(¹)	(¹)	(¹)	(¹)	(¹)	(¹)
1918.....	(¹)	(¹)	(¹)	(¹)	(¹)	(¹)	(¹)	(¹)
1919.....	152	171	154	184	221	194	151	191

¹ Not reported.

An examination of the table shows that the two industries under consideration received increases in earnings somewhat in excess of the average of the eight industries for which the Bureau has figures. The silk industry is third from the top of the list, and the hosiery and underwear industry fourth. The index numbers 184 for hosiery and underwear and 191 for silk are both in excess of the Bureau's index number of 175 for the cost of living in the spring of 1919 on the 1913 basis.

Changes in Union Wage Scales, 1907 to 1919.

SUMMARIZED figures concerning the changes in recent years in union wage scales, drawn from a report prepared by the Bureau of Labor Statistics, are here presented. The statements are given in the form of index numbers (percentages) in which the figures for each other year are compared with the figures for 1913; in other words, 1913 is made the base, or 100 per cent. The wage figures are as of May each year.

INDEX NUMBERS OF UNION WAGE RATES, AND HOURS OF LABOR, 1907 TO 1919.

[1913=100.]

Year.	Index numbers of—		
	Rates of wages per hour.	Full-time hours per week.	Rates of wages per full-time week.
1907.....	90	103	92
1908.....	91	102	93
1909.....	92	102	93
1910.....	94	101	95
1911.....	96	101	96
1912.....	98	100	98
1913.....	100	100	100
1914.....	102	100	102
1915.....	103	99	102
1916.....	107	99	106
1917.....	114	98	112
1918.....	133	97	130
1919.....	155	95	148

For all trades covered in the report, taken collectively, the average union rate of wages per hour in May, 1919, was 155 per cent of the average in May, 1913, that is, the average rate in 1919 was 55 per cent higher than in 1913. In 1907 the average hourly rate was but 90 per cent of what it was in 1913; thus the average hourly rate had increased between 1907 and 1919 in the ratio of 90 to 155, an increase of 65 points in the index, which number is 72 per cent of 90, making an increase of 72 per cent in the rate of wages per hour between 1907 and 1919.

The index numbers for full-time hours per week decreased gradually from 103 in 1907 to 95 in 1919. It should be borne in mind that

these figures are percentages based on the year 1913, not actual hours. Index numbers for rates of wages per week increased from 92 in 1907 to 148 in 1919, or 61 per cent.

These index numbers are based on the union minimum rates as provided in agreements with employers. In some unions quite a percentage of members are actually paid, by individual arrangement, more than the union agreements specify. The average wage received by union men, therefore, to a greater or less extent, exceeds the prevailing union rate. The business agents and secretaries furnishing the information as to wage rates to the Bureau agents frequently had only indefinite knowledge concerning the exact amount above the scale received by some members of the union.

A Rest Day in Continuous Operation Industry.

By FRED C. CROXTON, OHIO INSTITUTE FOR PUBLIC EFFICIENCY.

VARIOUS plans have been suggested whereby 24 consecutive hours of rest one day in seven, combined with the 8-hour day, may be effected in industries requiring continuous operation.

It is essential that any plan adopted should:

1. Be easily understood in order to prevent confusion on the part of foremen and workmen.
2. Provide as far as possible for regularity of change or rotation of shifts.

EDITOR'S NOTE.—Certain industries require continuous operation. The simplest plan for manning such an industry has been to employ two crews, each working 12 hours a day and 7 days a week, with 24 hours of continuous service when day and night crews change place. This satisfies the need of the industry but is a heavy burden on the man. The tendency is toward an 8-hour day and a 6-day week. There are technical difficulties, however, in applying a 6-day personnel to a 7-day industry.

In the November, 1919, MONTHLY LABOR REVIEW, page 199, there was presented a working schedule for a continuous operation industry. The following table presents a brief comparison of the provisions of the plan with those of the three plans described by Mr. Croxton in this article:

Comparison of plans.

Item.	Plan published in November Review.	Plans here submitted.		
		No. 1.	No. 2.	No. 3.
Hours per turn.....	8.....	8.....	8.....	8.....
Days per week.....	6.....	Average 6.63.....	Average 6.....	Average 6.....
Hours per week.....	48.....	Average 53.....	Average 48.....	Average 48.....
Possible working hours per year.....	2,593.....	2,766.....	2,593.....	2,593.....
Rest period.....	32 or 56 hours once in 7 days.	24 hours after 6 turns.	40 hours, average once per week, with 24, 32, 48, or 56 hours twice in 13 weeks.	40 hours, average once per week.
Full calendar day of rest.....	Once in 7 days.	Once in 19 days.	Average once in 7 days.	Average once in 7 days.
Rotation in turn worked.....	Yes.....	Yes.....	Yes.....	No.....
Rotation in rest day.....	No.....	Yes.....	Yes.....	Yes.....

3. Eliminate unnecessarily long rest period, which might tend to demoralize the working force and to reduce earnings, and also to increase the number of men required.

In the MONTHLY LABOR REVIEW for November, 1919, one plan was suggested and it may be helpful to suggest three additional plans to meet varying needs and conditions. The plans here submitted cover six working positions, but the principles involved may be applied to any number of working positions excepting that the relief men in squads not multiples of six must be assigned to work relief for more than one squad in order to secure full time.

Plan No. 1.

THIS plan is probably the simplest which can be adopted. It does not provide for a full calendar day's rest each week, but for full 24-hours rest after six consecutive turns. The information is presented both in schedule and chart form merely for the sake of clearness. The plan covers 19 persons working in three 8-hour turns in six positions.

Each of the numbers 1 to 18 represents an individual worker. The letter "A" also represents an individual worker who may be termed a relief man, although, as a matter of fact, he has opportunity to work with exactly the same regularity as the employees indicated by numbers. He is a relief worker merely in the sense of working in the positions of persons numbered 1, 2, 3, etc., when these persons are off duty.

In the first presentation the turns are indicated in the first column and in the column for each day has been entered the individual number of each person on duty. The first turn may begin at any hour that is most expedient. In the second presentation, which is in chart form, the several employees are indicated by numbers in the first column, and under each day the space has been crossed for the turn worked and left blank for the period of rest.

The plan provides for each man, except the relief man, remaining continuously in the same position. Thus, it will be noted that on Monday of the first week position No. 1 is filled by employee No. 1 in the first turn; by employee No. 7 in the second turn; and by employee No. 13 in the third turn. As a matter of fact, in many lines of work all members of the squad would be engaged in the same work without any distinction as to positions.

SCHEDULE FOR 8-HOUR TURNS WITH 24 HOURS OFF AFTER 6 DAYS, IN CONTINUOUS OPERATION INDUSTRIES.

3	1.....	13	7	7	7	7	7	7	1	1	1	1	1	1	A	13	13	13	13	13	13	13	
	2.....	14	14	8	8	8	8	8	2	2	2	2	2	2	2	A	14	14	14	14	14	14	
	3.....	15	15	15	9	9	9	9	3	3	3	3	3	3	3	3	A	15	15	15	15	15	
	4.....	16	16	16	16	10	10	10	10	10	10	4	4	4	4	4	4	A	16	16	16	16	
	5.....	17	17	17	17	17	11	11	11	11	11	11	5	5	5	5	5	5	A	17	17	17	
	6.....	18	18	18	18	18	18	12	12	12	12	12	12	12	12	12	6	6	6	6	A	18	

Each man, including the relief worker, works 8 consecutive hours and is off 16 consecutive hours in each 24-hour day. After 6 consecutive turns of work each man, including the relief worker, has 24 hours off. Each man, including the relief worker, after he gets a 24-hour instead of a 16-hour rest period, starts work on the shift beginning eight hours later than the one on which he worked immediately preceding the rest period. Thus, employee No. 1 who works the first turn on the first Monday gets 24 hours of rest immediately thereafter, and then takes the second turn on Tuesday.

A complete rotation in turns is made in 19 days; the 20th day (Saturday of the third week) has been included in both schedule and chart merely to show that it exactly duplicates the first Monday. Seven periods of 19 calendar days (133 calendar days) elapse before the employees get back to the same schedule of turn and day per week: for example, until employee No. 1 again gets his 24-hour rest period following the first turn on Monday.

Working full time on the basis of 8 hours per day and 7 days per week, each worker could work 2,920 hours per year. Under the plan here submitted for an 8-hour day with 24 hours off after six turns, each full-time worker could work 2,766 hours per year. On a working schedule of 6 days per week and 8 hours per day, he could work 2,503 hours per year.

In large plants it may be more satisfactory to use a squad of relief men for several groups of workers instead of a single relief man for each group of six. In other words, instead of having "A" substitute for employees 1 to 18 in one squad it may be more desirable to have him substitute for employees 1, 7, and 13 in six different squads.

Plan No. 2.

THE Bureau of Labor Statistics has referred to the writer a letter just received from a very large corporation, stating that they have "entered into a definite agreement giving to its * * * shift employees a 48-hour week without reduction of earnings," and asking for "any information as to a practical shift schedule, providing *rotation in turns and rotation of the day of rest with an average of 48 hours per week.*"

In an effort to meet the needs of this corporation the schedule presented on page 124 has been drafted.

Each of the numbers 1 to 18 represents an individual worker. The letters A, B, and C represent what may be termed "regular relief workers," and the letters D, E, and F what may be termed "extra relief workers." In a period of 13 weeks a complete rotation of the day of rest is made for each regular worker and each "regular relief worker," and the average number of hours per week is 48 for the regular workers. The three regular relief workers have had only 72 days each in the 13 weeks and the three extra relief workers have had 6 days each. In large establishments, however, the three extra relief workers can be eliminated and the three regular relief workers can be given full 78 days in 13 weeks by starting the squads of 6 (18 for three turns) at different times, so that one of the two consecutive rest

days for the regular relief workers on one squad can fall at the time when extra relief workers are needed on another squad.

The time off duty at the rest period is 40 hours, excepting when the turn is shifted as follows:

During the sixth and seventh weeks—

Nos. 1 to 6 in shifting from the first to the third turn get a rest period of 56 hours.

Nos. 7 to 12 in shifting from the second to the first turn get a rest period of 32 hours.

Nos. 13 to 18 in shifting from the third to the second turn get a rest period of 32 hours.

During the thirteenth week—

Nos. 1 to 6 in shifting from third to first get 24 hours.

Nos. 7 to 12 in shifting from first to second get 48 hours.

Nos. 13 to 18 in shifting from second to third get 48 hours.

In order to give each regular man a chance to work on each of the three turns the schedule must be continued to cover 26 weeks. The principle involved, however, is exactly the same as for the 13-week period, except that at the next turn rotation (the third in the 26-week period) Nos. 1 to 6 are shifted from turn No. I to turn No. II with a 24-hour rest period and shifted back in the twenty-sixth week with a 56-hour rest period. In the same way Nos. 7 to 12 are shifted from turn No. II to turn No. III with a 24-hour rest period and back again with a 56-hour rest period, and Nos. 13 to 18 are shifted from turn No. III to turn No. I with a 24-hour rest period and back again with a 56-hour rest period.¹ The schedule follows:

¹ EDITOR'S NOTE.—While this change provides work on each turn it does not give the same number of days on each turn. By continuing the period to 39 weeks and shifting turns in the thirteenth, twenty-sixth, and thirty-ninth weeks, the same number of days on each turn may be obtained for the regular men.

SCHEDULE PROVIDING ROTATION IN TURNS AND ROTATION OF THE DAY OF REST, WITH AN AVERAGE OF FORTY-EIGHT HOURS PER WEEK.

From the schedule it will be noted that during the early weeks of the 13-week period the day of rest comes after five consecutive turns and during the later weeks after seven consecutive turns. In one calendar week there are two days of rest and in one calendar week no day of rest for each of the regular workers excepting the three filling position No. 6 (employees Nos. 6, 12, and 18).

The day of rest for each of the regular workers and for each of the three regular relief workers makes a complete rotation as shown in the following table:

DAY OF WEEK UPON WHICH DAY OF REST FALLS.

Week of period.	Designation of worker.						
	Numbers 1, 7, and 13.	Numbers 2, 8, and 14.	Numbers 3, 9, and 15.	Numbers 4, 10, and 16.	Numbers 5, 11, and 17.	Numbers 6, 12, and 18.	Numbers A, B, and C.
First.....	Tuesday	Wednesday	Thursday	Friday	Saturday	Sunday	Monday (Sunday
Second....	Monday (Sunday	Tuesday	Wednesday	Thursday	Friday	Saturday	Saturday
Third.....	Saturday	Monday (Sunday	Tuesday	Wednesday	Thursday	Friday	Friday
Fourth....	Friday	Saturday	Monday (Sunday	Tuesday	Wednesday	Thursday	Thursday

Sixth.....	Wednesday	Thursday	Friday	Saturday	Monday (Sunday	Tuesday	Tuesday
Seventh...	Thursday	Friday	Saturday	Sunday	None	Monday	Tuesday (Wednesday
Eighth....	Friday	Saturday	Sunday	None	Monday	Tuesday	Wednesday (Thursday
Ninth.....	Saturday	Sunday	None	Monday	Tuesday	Wednesday	Thursday (Friday
Tenth.....	Sunday	None	Monday	Tuesday	Wednesday	Thursday	Friday (Saturday
Eleventh..	None	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday (Sunday
Twelfth...	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday	Sunday
Thirteenth	Tuesday	Wednesday	Thursday	Friday	Saturday	Sunday	Monday

For the regular workers the day of rest during the 13-week period falls twice on each day of the week except for Wednesday in the first column, Thursday in the second, Friday in the third, Saturday in the fourth, Sunday in the fifth, and Monday in the sixth.

If it is satisfactory to make a partial instead of a complete rotation of the day of rest the period required for rotation of the turns and the partial rotation of the day of rest can be cut down accordingly, but these two principles must be kept in mind:

1. That during a certain portion of the period the days worked between rest periods will be five in order to secure the day of rest one day earlier each succeeding week and that during the remaining portion of the period the days worked between rest periods will be seven in order to secure the day of rest one day later each succeeding week.

2. That in rotation of the turn the total hours of rest for the two rotations during the period must be 80 hours, or twice the rest period of 40 hours without rotation of turn.

If desired in large plants, a squad of relief men for several groups of workers may be used under this plan, following the general lines indicated in the paragraph preceding the second schedule under plan No. 1.

Plan No. 3.

IT IS often asserted that workers prefer to remain on the same turn rather than to rotate, and that there is also an economic loss in rotation of turns. It is not the purpose of this article to discuss the merits of such contention. The schedule which follows, however, provides for the 8-hour turn with an average of 48 hours per week and rotation of the day of rest but without rotation of the turn. The period required for rotation is 12 weeks. It is not believed that further explanation of this schedule is necessary in view of the discussions of those presented under plans Nos. 1 and 2.

SCHEDULE PROVIDING ROTATION OF THE DAY OF REST, BUT WITHOUT ROTATION IN TURNS, WITH AN AVERAGE OF FORTY-EIGHT HOURS PER WEEK.

Turn number.	Position number.	First week.	Second week.	Third week.	Fourth week.	Fifth week.	Sixth week.	Seventh week.

Comparison of Earnings of New York State Factory Workers With Retail Prices of Food.

THE following table, taken from the Labor Market Bulletin, issued by the New York State Industrial Commission, gives a comparison of the course of average weekly earnings in the factories of the State with the course of retail food prices in the United States. The figures are index numbers, with June, 1914, as 100, and those for prices are derived from the relative prices published by the United States Bureau of Labor Statistics in the MONTHLY LABOR REVIEW.

² Drop in November, 1918, was due to closing of factories on Nov. 11, Armistice Day.

Increased Wages for Workers in Engineering and Foundry Trades, Great Britain.¹

WORKERS in the engineering and foundry trades recently put forward a claim to an increase of \$3.65 per week for men and \$1.82 for workers and apprentices under 18 years of age. The arbitration court has now made its award, which gives to workers over 18 an advance of \$1.22 per full ordinary week. The increase takes effect on December 1 and will remain in force for

¹ Data from American consulate general at London, published in Commerce Reports for Dec. 9, 1919. U. S. Department of Commerce.

four months. The workers affected are those belonging to the Amalgamated Society of Engineers, the Federation of Engineering and Shipbuilding Trades, National Federation of General Workers, the National Brass Workers and Metal Mechanics, the Amalgamated Machine Engine and Iron Grinders and Glaziers' Society, the Amalgamated Molders' Union, and the General Iron Fitters' Association.

The arbitrators state that the total advances over prewar rates given under former awards amount to not less than \$6.94 a week plus 12½ per cent on earnings in the case of time workers, and to \$5.23 a week plus 10 per cent or over on piece rates, and 7½ per cent on earnings in the case of pieceworkers.

The present award continues:

It has been prominently brought before the court that industry is seriously handicapped by the uncertainty which must prevail when rates of wages are changed at short intervals. In many branches of trade employers are obliged when quoting prices to attach a condition providing for variation in the event of changes taking place in the rates of wages before the order is executed. As a result, contracts are sometimes withheld, postponed, or diverted abroad, and employment is adversely affected.

There appears to the court to be no lack of demand at the present time for the products of the various industries in which the parties concerned are engaged. The state of trade, therefore, sets no limitation on production, and the court concurs in the view expressed by many prominent men who speak with authority for both employers and workmen that great need exists for increased output. Such increased output is necessary if the industry is to meet foreign competition successfully; and is a condition without which increased employment and the higher remuneration of the workers can not be achieved. Statements have been made that even with that reduction of working hours which has been made during the present year the proportionate loss of time by both time and piece workers is very great. Good timekeeping is obviously essential if a satisfactory rate of production is to be maintained.

In the view of the court, production would also be stimulated by the adoption, wherever practicable, of the system of payment by results. As already stated, the percentage increase in the cost of living, as known at the date of hearing, was practically the same as in October, 1918, when the hearing took place which resulted in the last advance of wages. The court feels obliged, however, to bear in mind that the ensuing months are winter months, and that there is a general expectation, based on what appears to the court to be substantial grounds, that considerable increases in the prices of various important articles of food and commodities in common use will take place. Since the publication of the last Labor Gazette figures the prices of meat, milk, and sugar have, in fact, been advanced by an amount which will materially affect the working-class expenditure.

The amount hereby awarded is to be taken into account in the calculation of payment for overtime and night duty, and for work on Sundays and holidays and will form part of the total earnings of time and piece workers upon which the bonuses of 12½ per cent and 7½ per cent, respectively, are to be calculated, but it is not otherwise to apply to or affect present time rates, premium bonus rates, or piecework prices, and is not to be taken into account as part of the time rates for the purpose of fixing new piecework prices or bonus rates.

Commenting on the situation, the London Daily Express refers to the recurrence of the "vicious circle," whereby increase in cost of living is followed by demands for more wages; this being given raises the price of products, results in higher living costs, and is followed automatically by further claims to greater wages. In an effort to break this circle labor leaders have suggested several plans. As given in the Express, these plans include:

Increased production in conditions whereby the workers will be completely safeguarded from any attempt at exploitation and given an adequate share in the results of the extra production.

Legislation to prevent restriction of competition among manufacturers.

Universal payment by results, with binding guaranties against the reduction of piece rates.

Release by the Government of the great stocks of foodstuffs still held, and the removal of control in order to stimulate competition.

Expropriation of war fortunes and the limitation of present profits.

Prevention of speculative and overcapitalizing operations of great industrial syndicates.

More stringent antiprofitteering action.

Regulation of wage standards in accordance with the conditions of the respective industries.

Wages and Hours of Domestic Servants in England and Bavaria.

England.¹

ACCORDING to a dispatch from the American consulate general at London, the following scale of wages and conditions prepared by the joint advisory council representing the Mistresses' Association and the domestic section of the Workers' Union, has been adopted by the Association of Employers of Domestic Workers for Birmingham and the Midland Counties:

Girls of 14 to 16 in training: Minimum of \$75.90 to \$90.50 per year.

Girls of 17: Minimum of \$105.10, rising by stages to \$158.65 for servants aged 24, including an allowance of \$12.65 for uniform.

Ordinary working hours: 6.30 a. m. to 10 p. m., with 2½ hours for meals, and 2 hours off for leisure. One-half day (3 p. m. to 10 p. m.) per week, and a similar half day alternate Sundays, with a fortnight's holiday each year.

For servants over 24: Minimum wages are to be agreed upon by mistress and maid. Long service in one situation is recommended for special recognition.

¹ Commerce Reports, Dec. 9, 1919. U. S. Department of Commerce.

Bavaria.¹

THE Republican Government of Germany having abrogated the old oppressive laws regulating domestic service and granted new rights to domestic servants, the latter's wage and working conditions have of late been newly regulated in a number of States and districts through laws, awards, and collective agreements. In Bavaria, for instance, a Government decree has proclaimed a 10-hour workday for domestic servants, leaving the arrangement of working hours to mistresses and servants.

In the Bavarian twin cities Nuremberg-Fürth, the local union of the Central Federation of Domestic Servants, conjointly with the Christian and Catholic Servants' societies and the National Federation of Female Domestic Servants, had initiated a wage movement and invited the Housewives' League to discuss with them their demands with a view of concluding a collective agreement. These discussions took up more than three months, but were without result, as the housewives steadily refused to consent to shorter working hours and better wages. A friendly settlement not being achievable, negotiations were broken off and the demobilization office at Nuremberg was requested to take the dispute under consideration and to make an award.

An award was made on June 4, 1919. The award, which was declared legally binding by the Bavarian Government, granted the demands of the domestic servants with respect to working conditions and provided a minimum wage scale. Representatives of the Central Federation of Domestic Servants, the National Federation of Female Domestic Servants, and the Housewives' League were given a hearing by the arbitration board before the award was handed down. The award applies to the Nuremberg-Fürth district only, and its principal provisions are as follows:

Service record books are to be replaced by separate discharge certificates. Notice must be given before the 15th to take effect on the first of the following month. Leaving a situation without notice is also provided for, sections 123 and 124 of the Industrial Code applying here. The municipal employment exchange is to be used. After nine months' service, eight days' leave is to be allowed. After more than one year's service, longer leave must be given. During leave servants are entitled to full wages and to compensation for board.

Hours of work must be between 6 a. m. and 8 p. m., and rest periods amounting to four hours must be included within this period, as follows: Early coffee, one-quarter hour; breakfast, one-quarter hour; dinner, one hour; tea, one-quarter hour; supper, one-half hour; and

¹ Correspondenzblatt der Generalkommission der Gewerkschaften Deutschlands. Berlin, July 26, 1919.

one and three-quarters hours' free time in the afternoon, which may be spent outside the house. On Sundays and holidays only the most necessary work shall be done. When spring cleaning is to be done, extra help must be hired, unless the mistress helps. The hours for afternoons and evenings out are arranged differently for juvenile and for adult servants. Juvenile servants must be home by 8 p. m., adults by 12 p. m. Opportunity must be given in the evenings to attend night schools, lectures, meetings, theaters, etc. Wednesday afternoon is to be free in each week, and in addition to the Sunday half day a whole free Sunday in each month must be allowed in the summer months.

Wages are fixed for beginners up to the age of 18. Domestic servants under 16 years of age are to get 18 to 24 marks,¹ and those between 16 and 18, 25 to 32 marks a month. For those over 18 the minimum monthly wages are as follows:

MINIMUM MONTHLY WAGE RATES OF ADULT DOMESTIC SERVANTS IN THE NUREM-BERG-FÜRTH DISTRICT (BAVARIA), FIXED BY ARBITRATION AWARD OF JUNE 4, 1919.

Occupation.	Monthly minimum wage.	Occupation.	Monthly minimum wage.
	Marks.		Marks.
Housemaid under 20 years of age.....	35	Chamber maid, highly qualified.....	55
Housemaid over 20 years of age.....	40	Lady's maid or nursery governess.....	60
Nursemaid.....	40	Cook, plain.....	65
Maid of all work.....	45	Cook, highly qualified.....	75
Maid of all work and cook.....	55	Housekeeper.....	85
Chamber maid.....	45		

Overtime is to be paid at the rate of 1 mark an hour. In addition to money wages, domestic servants are entitled to full board and lodging. Laundresses and charwomen are to be paid 8 marks a day for 8 hours' work, or 5 marks a day if they are furnished meals.

During the first weeks of the application of the award the housewives experienced great difficulty in adapting their households to its provisions, but the servants insisted on full observance. At the end of July, however, the mistresses had with good grace accepted the new order of things, and, as servants are scarce, were frequently offering and paying wages much higher than those fixed by the award.

¹ Owing to the unsettled condition of German exchange wage rates are quoted in this article in marks without conversion into the equivalent in American money. Normally the par value of the mark is 23.8 cents.

COOPERATION.

Joint Farmer-Labor Cooperative Congresses.¹

A JOINT farmer-labor cooperative congress will be held in Chicago, February 12-15, whose purpose will be "to give effective aid to strengthening and developing the cooperative movement in America by the establishment of a Nation-wide commission, which shall serve in a comprehensive way to coordinate and build up cooperative effort between and among producers and consumers, and to unify action in eliminating speculation and profiteering in the necessities of life, and develop, to the mutual profit and advantage of all concerned, permanent good will and understanding." It is not proposed, it is explained, to establish any new cooperative organizations, but simply to bring together existing organizations among industrial workers and farmers. The conference will endeavor to work out some system of direct distribution whereby the products of the farmers' and the growers' associations can be brought to the industrial workers in cities, and, later, the products of the workers be sent to rural districts.

At the conference will be delegates from the progressive farmers' organizations, representing some eight or nine hundred thousand farmers, from the various fruit growers' associations, the Potato Growers' Association, the National Nonpartisan League, the Public Ownership League, labor organizations, and the cooperative societies, both wholesale and retail.

The congress is the outgrowth of a similar conference, also held in Chicago, November 21 and 22.

At the November conference the "National Cooperative Manifesto" was adopted. This manifesto affirmed the belief of the conference that the present high prices are due to the "wasteful methods, speculation, and profiteering of the middlemen," and declared the remedy to be the elimination of these middlemen through cooperative organizations. The growth of cooperation in the United States was noted

¹ The data on which this article is based were obtained from the National Cooperative News (Chicago), Jan. 10, 1920, the Cooperative Herald (Fargo, N. Dak.), Dec. 19, 1919, and Mr. Warren S. Stone, grand chief of the Brotherhood of Locomotive Engineers.

and indorsement made of the efforts to establish a national wholesale society and to unify the cooperative movement along national lines. The manifesto recommended that schools for training cooperative managers and employees and for the inauguration of approved systems of accounting and auditing be established.

The conference authorized the appointment of a committee of 12, representing the farmers, organized labor, and cooperative associations, to act as a joint board in developing the cooperative movement, and to submit the manifesto to the Labor Conference held in Washington, D. C., on December 13. The committee carried out its instructions and duly submitted the manifesto. The Labor Conference, however, took no action on it, merely referring the whole matter of cooperation to the American Federation of Labor committee on cooperation. In spite of the national body's failure to act, organized labor is giving the February conference its strong support, the railroad brotherhoods being particularly active.

Consumers' Cooperation.

THAT most of the literature dealing with cooperation has led to confusion in determining the true character of the movement is asserted by Albert Sonnichsen, secretary of the Cooperative League of America, in his recent book, *Consumers' Cooperation*.¹ Because the practical experience of the movement has, until recently, been too limited for a philosophy to be formulated, writers have "invariably confused its boundaries and extended them into other fields of joint action, associating the movement with enterprises thoroughly out of sympathy with it." They have regarded the cooperative movement as having four phases: Productive, agricultural, credit, and distributive—with consumers' cooperation forming the last-named phase.

The author eliminates the first three forms—the productive enterprises for the reason that "as a movement the self-governing workshops have ceased to exist," and the agricultural associations because they are not truly cooperative. In the agricultural society the "unit of membership is not a person but a private business interest"; neither is private profit eliminated, "for the goods are sold at as big a margin above the cost of production as possible, and this margin goes into the pocket of the original seller, the farmer. True this margin is very often not more than a just return for the labor involved in the

¹ Albert Sonnichsen: *Consumers' Cooperation*. New York, 1919. 223 pp.

production of the goods, but the margin is not regulated on that basis. It is a purely speculative margin." The farmers' associations, he declares, are "an integral part of the capitalist system," and it is this very system—private profit taking—that the cooperative movement combats. The credit societies organized among the working classes are, he thinks, very closely akin to consumers' cooperation, since they are in the nature of cooperative savings banks. He points out, however, that when the regular consumers' societies begin to appear, the credit societies disappear, being taken over as part of the business operations of the consumers' societies. The credit societies are not necessarily truly cooperative in principle, inasmuch as they may be formed by a group of small tradesmen to finance just the sort of enterprises (i. e., the profit-taking ones) to which the cooperative movement is opposed.

The author therefore restricts the cooperative movement to consumers' cooperation.

Part I of the book is devoted to the history of cooperation in the various countries—England, Switzerland, France, Denmark, Germany, Italy, Russia, Belgium, and the United States.

Part II is a discussion of consumers' cooperation as a factor in the social revolution. Stating that the ultimate aims of cooperation, the realization of an international cooperative commonwealth "coequal and coextensive with the whole civilized world," are essentially revolutionary, though slow and peaceful in the methods of attainment, the author takes up such movements as socialism, syndicalism, and anarchism and shows the differences and similarities between them and cooperation.

The final chapter deals with the relation of cooperation and labor. Under labor the author includes all "whose means of livelihood are dependent on the remuneration they receive for service rendered, regardless of its social value"; the difference between worker and capitalist lies in the nature of the source of their income: the one lives by effort, the other by speculative trade.

The writer remarks upon the capitalistic aspect of the cooperative movement as shown by the fact that although the forty or fifty thousand workers employed by the English cooperative wholesale societies have, on the average, higher wages, shorter hours, and better working conditions than do workers under capitalistic management, they have, as workers, no voice in the management, and may be discharged at the will of their employer. The stand taken by the societies is that the workers in the consumers' productive plants are really in the service of the social body of which they are themselves also members, and, as members, have as much control over working conditions as they are entitled to.

In spite of this aspect, cooperation is a labor movement, and it is pointed out that in all general labor disputes the cooperative societies have allied themselves with the workers.

The People Organized as Consumers.

IN SO far as cooperation tends to eliminate private profit, it also tends to increase the numbers of the working class. Thus the transformation of all members of society into workers would be the natural result of the complete abolition of private profit as a means of subsistence.

Carrying out the cooperative program to its logical conclusion, this would mean that the entire membership of all the cooperative societies would consist of workers, organized as consumers. Thus the workers in the cooperative factories would be their own employees and, through their cooperative societies, would have full power to regulate working conditions to suit themselves. This power the workers in the wholesale societies' factories already have, but, of course, they are now only 1 per cent of the total membership, the other 99 per cent being employed outside the movement. They have, therefore, only 1 vote out of 100 in the regulation of working conditions in their factories, and if the other 99 votes are invariably cast in their favor it is only through sympathy, and not through direct interest. But as cooperative production tends to increase at a faster rate than the membership, this ratio of 1 to 100 will gradually change, with 100 to 100 as a final, though perhaps an impossible, ideal. To all practical purposes the ideal will be accomplished when the ratio is 51 to 100, and that is well within the limits of possibility. Such a situation would give the cooperative workers a majority control of their own working conditions.

For the purpose of indicating tendencies, however, I shall continue to argue from the point of view of the ideal; the possible 100 out of a 100. Here, obviously, the workers and the consumers would be completely identical. With full power to raise their own wages as workers, there would be no incentive to do so, for the cost of living would rise automatically with the standard of wages. Under a system involving production for use only, labor would get the full product of effort, and there would be no question of either high or low wages. True, a certain portion of the wealth accruing from labor might be utilized in manufacturing machinery, or building new factories, or set aside in the national treasury, for the purpose of carrying on future productions, but all this would constitute social capital and would eventually revert to labor anyhow.

Summed up, and considered in its social aspect, as a universal institution, cooperation would mean the people of the country organized as consumers, employing themselves as workers, producing their own needs on a basis of actual labor cost, for use only. Thus not only the incentive, but the means, to exploitation of labor would be entirely absent.

Cooperation would not, in the author's opinion, entirely eliminate labor disputes. "Under universal cooperation, society as a whole would dominate, and all the labor groups would be subservient to it. This would entail no injustice to labor as a whole, because all members of society would be workers, and all of the product of labor would

therefore go to labor since none would be devoted to private profit. But there would always be the possibility of dispute between one trade and another." Cooperation would, however, adjust the conflicting trade interests "as nearly as humanly possible, by making labor entirely subsidiary to the great motive behind it—consumption, the human desire to fulfill the needs and pleasures of life."

As to the destiny of the movement, the writer says: "The basis of the membership is a human being, pure and simple. Potentially, membership includes all society—it is all-inclusive. Consumers' cooperation is essentially a social movement, for the interests it represents permeate all society." He thinks, however, that cooperation, being entirely voluntary with the individual, will never become "absolutely universal." It will never wholly supplant private enterprise. While theoretically it would accomplish the complete socialization of industry, there would always be an opportunity for "the private capitalist who could, or thought he could, carry on business in competition with the socialized industry," for the inventor, and for the man with originality and individuality in creative work. Cooperation "is based on the happiness, the free will, of the individual. It desires to include no one it can not benefit. When cooperation has spread just so far as it can benefit human beings it will stop, and be perfectly content to stop." The victory of cooperation has been and will be "through its own inherent superiority."

VOCATIONAL EDUCATION.

Training and Placement of Disabled ex-Service Men in the United States.

BY THE Vocational Rehabilitation Act, approved June 27, 1918, the training of discharged disabled soldiers, sailors, and marines and their replacement in industry were made a special duty of the Federal Board for Vocational Education.

According to the provisions of the act training was to be furnished to two classes of disabled men: (1) Cases in which disability prevented a return to previous employment, necessitating preparation for an entirely new employment; (2) cases in which minor disabilities, though not preventing a return to former employment, did require what the board terms "job-improvement instruction," or instruction for the purpose of advancement in the occupation followed.

One of the conditions of eligibility for training in cases under number (1), previously cited, was that the discharged disabled man must be entitled to compensation under Article III of the War-Risk Insurance Act. The care which of necessity the War-Risk Insurance Bureau was forced to exercise in securing proofs before ruling regarding such compensation often caused considerable delay in placing men in training; even when funds were available for doing so, and finally in May, 1919, a bill, approved by the Secretary of the Treasury, who represented the War-Risk Insurance Bureau, and by the Federal Board for Vocational Education, was introduced into Congress, amending the original act in this respect and disassociating the work of vocational rehabilitation under the Federal Board and the determination of compensation by the War Risk Insurance Bureau.

Those eligible for training under the act¹ which became a law July 11, 1919, include: "Every person enlisted, enrolled, drafted, inducted, or appointed in the military or naval forces of the United States, including members of training camps authorized by law, who since April 7, 1917, has resigned or has been discharged or furloughed therefrom under honorable conditions, having a disability incurred, in-

¹ Public, No. 178, 65th Cong. (S. 4557).

creased, or aggravated while a member of such forces, or later developing a disability traceable in the opinion of the board to service with such forces, and who, in the opinion of the Federal Board for Vocational Education, is in need of vocational rehabilitation to overcome the handicap of such disability, shall be furnished by the said board, where vocational rehabilitation is feasible, such course of vocational rehabilitation as the board shall prescribe and provide."

The act also provides that every person who elects to take advantage of courses of vocational rehabilitation prescribed by the board shall be paid a monthly sum during his period of training sufficient for his support and for the maintenance of his dependents, if any. The sum so paid shall not, however, "be more than \$80 per month for a single man without dependents, or for a man with dependents \$100 per month plus the several sums prescribed as family allowances under section 204 of Article II of the War-Risk Insurance Act." The sum of \$6,000,000 was appropriated for the use of the Federal Board in carrying out the provisions of this law, and by subsequent legislation, July 18, 1919, an additional appropriation of \$8,000,000 was placed at its disposal for carrying on the work of vocational rehabilitation.

Regulations Regarding Training and Placement.

THE Federal Board, being thus given a free hand to speed up its work, adopted, soon after the passage of the act on July 11, 1919, certain regulations which experience had demonstrated as advisable in the training and placement of the men and of which the following are noteworthy:

(a) No wages earned by men in training to be taken from the men, either directly or indirectly by diminishing the amount of their support and maintenance.

(b) Men in training to be paid twice a month. Provision for making payments semimonthly has presented a large administrative problem, but has helped to relieve the financial straits of disabled men.

(c) Men finishing school training to be put in probationary employment for a period of two months on pay where necessary.

(d) Men in placement training on the job to be eligible for transfer back to school, as may be required in any case, for further institutional training with pay.

(e) Men not to be dropped from the rolls on finishing courses of instruction for a period of 60 days, until every effort has been made to secure employment for them.

(f) Men discontinuing training for any reason to be carried on the pay roll to the 15th of the month or the last of the month, in order to give the district office opportunity to make further adjustments and assign new courses of instruction.

(g) Men to be provided with proper medical care. As there are legal difficulties in the way of the War Risk Insurance Bureau as regards provision of proper medical care for men in training who are in receipt of compensation

from the bureau, and in cases of sickness or injury not traceable to service, the Federal Board has arranged to pay for medical care in all cases where it becomes necessary and where such care is not provided by the War Risk Insurance Bureau or the Public Health Service, and to arrange for adjustment of the payment of claims for this medical care by the proper responsible Government agency.¹

In carrying out its work of rehabilitation and placement the board is authorized to cooperate with public and private agencies. Very satisfactory cooperative arrangements have therefore been established with the following bodies: The Departments of Commerce, Labor, and Agriculture; the War and Navy Departments; the Public Health Service; the Surgeon General's Office, War Department; the Bureau of Medicine and Surgery, Navy Department; the War-Risk Insurance Bureau; United States Employment Service; the American Red Cross; the Council of National Defense; the National Catholic War Council; the National Manufacturers' Association; the American Federation of Labor; the United States Chamber of Commerce; the Elks' War Relief Commission; the Elks' Clubs throughout the country; the Rotary Clubs throughout the country; and with casualty insurance companies throughout the country, as well as many hundreds of others. In addition thousands of smaller agencies are rendering efficient aid in the discharge of this task.

The word "disabled" is capable of various interpretations, according to the degree of injury received. The board has therefore found it necessary to set a standard of disability for the application of its efforts. A disabled man, as at present defined by the board, is one suffering a major disability resulting in a vocational handicap of approximately 15 per cent or more.

Training and Placement.

THE rehabilitation work is divided into institutional training and placement training, some of the men requiring one kind, some another, and still others both.

In each of the 14 districts into which the country is divided for the work of vocational rehabilitation carried on by the board, there is a supervisor of training and a supervisor of placement. The supervisor of training deals exclusively with the institutional end of the work. It is his business to link up with the Federal Board such schools and colleges as will furnish the training required to men approved for institutional courses. While it is necessary for the board to use all possible existing agencies, since it is not authorized to construct buildings for its work, the task of providing for training along professional, engineering, agricultural, and commercial

¹ Vocational Summary, November, 1919, p. 134. Washington.

lines, according to a recent report,¹ has not been a difficult one, the response from the universities, colleges, and schools throughout the country having been most gratifying, and the facilities offered adequate.

On the other hand, the task of the placement supervisor, who is always selected because of actual experience in industry, has been much less simple. He must provide both placement training and placement for men who do not desire to take institutional training or who from their anxiety to get back into regular employment feel that they can not afford the time to take such training. School facilities for training along trade and industrial lines are either inadequate or unavailable for several reasons. Schools furnishing a complete industrial training are few in number, and such as do exist have been crowded with regular students, especially since the close of the war. Moreover, the range of occupations in which trade schools offer courses is limited to 15 or 20, and these are quite insufficient to meet the variety of trade training demanded by the discharged men.

It has been necessary, therefore, to make arrangements for industrial training in shops, mills, factories, and offices for men whose previous experience and present physical condition best fit them for these lines of work. While the responses from employers pledging their facilities for placement training have been equally as prompt and generous as those regarding institutional work, there are considerations which complicate arrangements of this character.

In order to make the best use of previous experience or skill the board endeavors to give every man a thorough training in a pursuit as closely related to his former occupation as his disability and other circumstances allow, and furthermore one which will restore him to his full wage-earning capacity, thus making him eligible for membership in the union of his trade if he desires to join it. Effort is also made to select places for training where the best working conditions prevail. Any interference, due to the introduction of intensive courses of placement training, with the relationship or agreements existing between employers and employees is carefully avoided.

The cooperation of the employees as well as of the employers in plants where the placement training is done is sought and already many of the labor organizations have pledged their assistance in this work. Notable among these are the railway employees of the United States whose resolution² regarding aid to disabled soldiers and sailors, adopted at Washington, September 18, 1919, follows:

Whereas many of the soldiers, sailors, and marines who served the country in the recent war with Germany, have sustained permanent injuries, by which

¹ U. S. Federal Board for Vocational Education. Third annual report. 1919. Vol. II, p. 18. Vocational rehabilitation. Washington, 1919.

² Vocational Summary, December, 1919, pp. 149. Washington.

they are handicapped in pursuing their former vocations, and in some cases prevented from engaging in any self-supporting pursuit, and

Whereas society owes to these men a debt which can neither be estimated in terms of money nor paid in measures of praise or applause, and

Whereas these disabled men would in many cases become mendicants and liabilities upon society unless rehabilitated to usefulness and economic equality with other workers, and

Whereas the Federal Government has made provisions for these men to be educated, apprenticed, and trained, free of cost to them, in the various professions, trades, and occupations according to their several circumstances, and that they and their dependents shall be maintained and subsisted at the Government's expense during such preparation for future life, and

Whereas the most suitable training for some pursuits is available only "on the job," where instruction can be given concurrently with practice, and

Whereas the Federal Board for Vocational Education has expressed as its policy that each disabled man shall be returned to as nearly his former pursuit as is compatible with his disability and most promising to his future economic success, and, that all training will be thorough and designed in each case to fit the man with the ability to earn the prevailing wage in the occupation for which he is trained, and

Whereas it has come to our attention that some of these men who have made such sacrifices for the common good of society can best profit by training in the railroad shops of the country: Therefore, be it

Resolved, That we, the representatives of the machinists, boiler makers, blacksmiths, sheet-metal workers, carmen, and electricians, employed on the railroads of the United States, pledge the full cooperation of these workers with the Federal Board for Vocational Education in carrying on this great work; and further be it

Resolved, That disabled ex-service men entitled to training under the direction of the Federal Board shall be given special consideration and privilege in pursuing courses of training in railroad shops and that apprenticeship regulations shall not operate to prevent the entrance of such worthy men into courses of special instruction in railroad shops; and further be it

Resolved, That the local committees and local representatives of these trades on the railroads will upon request meet with the local representatives of the Federal Board for the purpose of cooperation in the induction of such men into shop training; and further be it

Resolved, That the officers of the railway employees' department of the American Federation of Labor and the officers of the machinists, boiler makers, blacksmiths, sheet-metal workers, carmen, and electricians' organizations be requested to send out this plan of cooperation to all local lodges and local representatives on the railroads; and further be it

Resolved, That copies of this resolution shall be furnished to the editors of the official journals of our respective organizations with the request that same be published in the next issues thereof, and that copies of the resolution be also sent to the Director of the Federal Board and to the Private Soldiers and Sailors' Legion and the American Legion.

Officers of the railway employees' department, United States Railroad Administration and Federal Board, have arranged the following plan of cooperation which, by order of the Director General of Railroads, Mr. Walker D. Hines, became effective October 31 on all railroads under Government control.

1. Only disabled men who are trained by the Federal Board for Vocational Education are covered by this arrangement.

2. Each of these handicapped men will require special consideration in the light of their particular circumstances; every case will be taken up separately by the representatives of the Federal Board with the representatives of the shop employees and the shop management, with a view to reaching a complete understanding of its circumstances and the establishment of thorough cooperation in arranging the details of the training.

3. As these men will require a special character of training they will not be considered as apprentices, but will be admitted to shops for the purpose of such special training as their injuries or circumstances require, irrespective of the number of apprentices in the shop or on the system.

4. If for any reason there is a failure to reach a satisfactory understanding locally concerning the training of any disabled man, as herein provided for, the case will be taken up immediately with the railway employees' department and the central office of the Federal Board for Vocational Education in Washington, D. C., for adjustment.

5. Each man while in training under this arrangement will be paid at the rate of 25 cents per hour, irrespective of the amount received by him as training pay from the Federal Board for Vocational Education.

6. No man in training under this special arrangement will be permitted to work overtime or on legal holidays, nor will his course of training be governed by apprenticeship regulations, but otherwise he will be required to observe the rules and regulations of the shop.

7. Each man at the completion of training will be as free to accept employment where he is trained as elsewhere, as circumstances may require and opportunity presents itself, but if he continues in the service as a workman he will be paid the prevailing rate from the date upon which his training is completed.

Courses Offered Disabled ex-Service Men.

THE courses pursued by disabled soldiers, sailors, and marines under the Vocational Rehabilitation Act, together with the number of men in each course, are shown in a table under date of November 22, 1919, as follows:¹

It is apparent from this table, as the Vocational Summary points out, that the largest number of men, 27.8 per cent, is enrolled in the trade and industrial courses. The business or commercial courses hold second place with 26.5 per cent, while prevocational training, agricultural training, and professional training follow with 16 per cent, 15.4 per cent, and 14.2 per cent of the men enrolled, respectively.

Up to December 11, 1919, a total of 39,000 men, from the 14 districts, had been recommended for training; 23,000 had been approved for training, and of these 20,081 were taking courses of one kind or another. Only 2,500, however, were in placement training. From June 27, 1918, to November 29, 1919, the board had placed 3,752 without training and 118 with training. There have been in addition 13,544 self-placements. Since August, 1919, the board has placed only those whom it has trained. In a consideration of the number of placements made attention should be called to the fact that many cases require a training period of about two years and from six months to one year of practice, before placement is possible or practicable. Delays, too, are apt to occur in both training and placement. Sometimes a man who, from every indication and all available information, should be given a certain kind of training fails to show any aptitude in it and must be transferred to some other

line. It also happens that after training disabled men can not always be promptly placed because firms are not ready to assume the risk incurred in employing them.

The self-placements very frequently result from indirect assistance given by the board. In refusing to take full credit for the large number of self-placements resulting indirectly from its good offices the board is pursuing a somewhat different policy from that adopted in some of the other countries dealing with the same problem.

Recent Agreements in Building Trades.

New York City.

THE following is the text of the agreement entered into on November 20, 1919, between the Building Trades Employers' Association and the Building Trades Council of the City of New York, the latter representing 33 trade-unions. The agreement was effective on January 1, 1920.

In order to secure continuity of employment and uninterrupted production it is hereby agreed between the Building Trades Employers' Association of the City of New York and the Building Trades Council of the City of New York * * * that:

1. The working week shall consist of forty-four (44) hours.
2. The rates of wages from January 1, 1920, to December 31, 1921, inclusive, shall be as follows:

	Per day of 8 hours.
Art-glass workers.....	\$7. 00
Asbestos workers and insulators.....	8. 00
Blue-stone cutters.....	8. 00
Carpenters.....	8. 00
Dock builders, house shorers, and sheath pilers.....	7. 50
Cement masons.....	8. 00
Cement and concrete workers (laborers).....	(¹)
Composition roofers and waterproofers.....	7. 00
Composition roofers and waterproofers (foremen).....	7. 50
Electrical workers.....	8. 00
Electrical workers' helpers.....	4. 50
Elevator constructors.....	8. 00
Elevator constructors' helpers.....	6. 00
Granite cutters.....	8. 00
Hoisting engineers, by the week.....	46. 75
Hoisting engineers, by the day.....	9. 00
Hoisting engineers, running compressors, extra per week....	7. 00
Housesmiths and bridgemen, Local No. 40.....	8. 00
Housesmiths' finishers, Local No. 52.....	8. 00
Housesmiths' helpers.....	6. 00

Provided, should the cost of living materially change, upon five months' notice from the Building Trades Council or the Building Trades Employers' Association given prior to January 1, 1921, the wage schedule for the calendar year 1921 shall be reopened and readjusted by the representatives of the parties hereto.

3. The existing trade agreements between the several trade associations, members of the Building Trades Employers' Association and the unions of their respective trades shall be continued upon their present terms and conditions until the expiration of this agreement, unless changed by the mutual consent of the parties thereto; except, that the working week and the wage schedule herein agreed upon shall not be changed, except as herein provided for.

4. Regular or consecutive overtime shall not be worked unless permission to do so shall have been given by a joint committee, consisting of the chairman of the board of governors of the Building Trades Employers' Association and the chairman of the Building Trades Council; provided that this shall not apply to occasional overtime made necessary by the exigencies of the work.

5. The unions as a whole or as a single union shall not order any strike against a member of the Building Trades Employers' Association, neither shall any number of union men leave the work of a member of the Building Trades Employers' Association, nor shall any member of the Building Trades Employers' Association lock out his employees; and, should any union or the members of any union violate this agreement and the violation is not discontinued within one week from the time notice of said violation is sent to the Building Trades Council, it shall not be considered a violation of this agreement or of any trade agreement if the Building Trades Employers' Association or any member or members thereof proceed to man the work with such men as can be secured, or, in case of such violation, if the Building Trades Employers' Association lock out the members of the defaulting union or declares a general cessation of work. It is further agreed that if workmen not members of the unions parties hereto are alleged to be employed on any job whereon any member or members of the Building Trades Employers' Association are doing work, it shall be brought immediately to the attention of the board of arbitration hereinafter provided

¹ Now being adjusted.

for, and if the facts are found by said board to be as alleged, it shall not be deemed a violation of this agreement, or of any trade agreement, for any member of the unions above mentioned to refuse to work on the job in question, unless such workmen are justifiably employed in the case above provided for, that is, where a union or a number of members of a union have first violated this agreement.

6. A permanent board of arbitration shall be established, said board to consist of five members of the executive committee of the board of governors of the Building Trades Employers' Association and five members of the executive committee of the Building Trades Council, to whom shall be referred all disputes that may arise relative to alleged violations of this agreement or the intent and meaning of any part thereof. The decision of said board of arbitration upon any matter submitted to it shall be final and binding upon all parties hereto; and, should said board of arbitration fail to agree after three consecutive daily meetings, said board of arbitration shall select an umpire, and each side shall make its arguments before the umpire, and his decision shall be final and binding upon all the parties hereto.

7. This agreement shall apply upon all work performed within the geographical limits of Greater New York and Long Island and in such additional territory as is included in the provisions of the existing trade agreements between the several trade associations of employers and the unions of their trades.

8. The unions parties to this agreement agree to furnish at all times sufficient men to man the work of the members of the Building Trades Employers' Association.

Norfolk, Va.

AN AGREEMENT recently made between employing contractors and members of unions with which the Norfolk Builders and Contractors' Association has contracts, created a joint arbitration board to which all disputes are referred. The agreement is given in full:¹

This agreement made this 1st day of August, 1919, between the Builders' and Contractors' Association, of Norfolk, Va., party of the first part, hereinafter called the builders' association and the ----- union, party of the second part, hereinafter called the "union."

Witnesseth: That the parties hereto hereby agree for their respective members as follows: |

1. There shall at all times be maintained a joint arbitration board to consist of the members of a board of five, hereinafter called builders' board, to be selected from year to year by the builders' association and of the members of a board of five, hereinafter called union board, to be selected from year to year by and to represent the following unions: Asbestos Workers and Pipe Coverers; Steam and Operating Engineers; Carpenters' District Council; Painters Decorators and Paper Hangers; Structural Ornamental and Reinforced Iron Workers; Electricians; Lathers; Sheet-Metal Workers.

Chairmen Preside Alternately.

The five members constituting the builders' board shall select its chairman, and the five members constituting the union board shall select its chairman. These chairmen shall be chairmen of the joint arbitration board. At the

¹ From Association General Contractor of America, Members' News Letter, Dec. 20, 1919. Chicago.

first meeting of the said joint arbitration board the chairman selected by the union board shall preside, at the next meeting of the said joint arbitration board the chairman selected by the builders' board shall preside, and so on alternately. There shall also be selected by the five members constituting the builders' board, a secretary, and there shall be selected by the five members constituting the union board, a secretary. These secretaries shall both serve as secretaries of the joint arbitration board. A quorum of said joint arbitration board shall consist of nine members, and no action shall be taken in any case unless at least six members vote in the affirmative. The said joint arbitration board shall meet at rooms to be provided by the builders' association, in the Monticello Hotel, Norfolk, Va., on the second and fourth Saturdays of each month, at 3.30 p. m., the first regular meeting to be held on the 23d day of August, 1919. Special meetings may be called at any time, to be held at said place, by either chairman of said joint arbitration board. Notice of said special meetings shall be given by either secretary by mailing same at least two days in advance of the time of the meeting. In the event of the absence from the meeting of the joint arbitration board of any member or members of the union board the chairman of the union board may appoint the secretary thereof, or a member or members of the union to take his or their place, and in case of the absence of a member or members of the builders' board the chairman of the builders' board may appoint the secretary thereof, or any member or members of the builders' board to take his or their place.

2. The builders' association agrees, for its members, that they will, beginning August 1, 1919, pay ----- to all employees employed by them and belonging to the mentioned unions, party of the second part. A day's work shall consist of eight hours' work, beginning at 8 o'clock a. m. and ending not later than 5 p. m. except on Saturdays, and a day's work on Saturday shall consist of four hours. All overtime work on Saturday afternoons and holidays shall be paid for at the rate of double time. Holidays shall be those named in the international union laws and of said union approved for this district.

Only Union Men to be Employed.

3. The builders' association for its members agrees that said members shall employ for the work covered by said union only men belonging to said union, unless said union can not furnish sufficient men to meet the demand within 48 hours from the time notice is furnished a representative of said union, in which event the members of the builders' association shall have the right to engage nonunion men until such time as the union can replace them with satisfactory union men.

4. The builders' association, for its members, agrees that it will, so far as possible, observe the by-laws and working rules approved by the international of the said union, and the union agrees, on its part, that there shall not be any strike nor tie-up on jobs of members of the builders' association except by an affirmative vote of six members of the joint arbitration board, in writing, signed by them, unless a general strike or tie-up is called by the international of said union.

Decision of Board Binding.

5. All matters pertaining to or disputes affecting the job, held by any member of the union with a member of the builders' association, shall be referred to the joint arbitration board, and no other action shall be taken thereon until the said joint arbitration board shall reach a decision with reference thereto, as

hereinabove provided, or as hereinafter provided for, and any decision so reached shall be binding upon the members of the union and the members of the builders' association.

6. In any case where six members of the joint arbitration board are unable to agree and thereby reach a decision, there shall be selected by an affirmative vote of at least six members of the said joint arbitration board a referee, to whom the said matters in dispute shall be referred, and his decision shall be binding upon all parties hereto and shall be treated and considered as the decision of the joint arbitration board.

7. The joint arbitration board shall have the right by an affirmative vote of six members thereon, at any meeting, to impose a fine of not less than \$25 and not more than \$100 on any members of the builders' association or said union for any violation of this contract, or any finding of the joint arbitration board, by either party. There shall, however, be only one fine imposed for any one act, violation, or offense, and the said fine so imposed therefor shall go to that union which may be determined by the joint arbitration board, be divided between several unions as said board may determine, and if the fine is imposed upon said union said fine shall go to that member of the association on whose job the offense was committed.

Wage Scale Fixed by Agreement.

8. Both the builders' association and the union hereby agree that the rate of wages fixed herein for the members of the union shall remain in effect for nine months from the 1st day of August, 1919, and no change be demanded unless notice is given to the joint arbitration board by either party hereto, in writing, of its intention to ask for a change 90 days prior to the 30th day of April, 1920; otherwise, shall continue and remain in force for a period of 12 months longer from the 30th day of April, 1920.

9. Any member of the builders' association shall have the right to retain men not belonging to said union, now in his employ, for a period of 90 days only from the 1st day of August, 1919, but in all events said association member shall and must unionize his men before 90 days, if possible.

10. It is understood and agreed, as far as possible, that nothing herein contained shall give the right to the union, or its members, to complain or make any dispute, or take action for a period of 90 days from date thereof, because any member of the builders' association has contracts on jobs on which nonunion men have worked, or are working; but this shall not prevent complaint, dispute, or action for any matter within his own craft. But in no case shall said union complain or bring charges against any association member for engaging or doing his work with nonunion bricklayers, plasterers, plumbers, and steam fitters for the full duration of this agreement or until such time as these unions shall make an arrangement with the builders and contractors' association with the consent of the arbitration board.

11. It is understood and agreed that this contract is made for and on behalf of the regular members of the builders' association only, and does not apply to the associate or honorary members thereof; said associate or honorary members consisting of building-material dealers, retail lumber dealers, etc., a list of which from time to time will be furnished by the builders' association to the union on request.

Creation of a German Archive for Collective Agreements.¹

SINCE the compact of November 15, 1918,² in which the central organizations of German employers and workers had agreed that in the future the working and wage conditions for all workers of both sexes should be regulated in accordance with conditions in the trade in question through collective agreements with the trade organizations of the workers, and since the people's commissioners by a decree of December 23, 1918,³ had given such collective agreements legally binding force, collective bargaining has steadily grown in importance. While hitherto collective bargaining predominated only in handicrafts establishments, now the handicrafts and large scale industries, commerce and agriculture, manual workers, and salaried employees outdo each other in concluding collective agreements, and the subjects regulated by these agreements become more and more numerous.

In view of the steadily growing extent of collective bargaining it is comprehensible that the various agreements frequently show greater diversities than would seem justified by occupational or local peculiarities. In the interest of sound social development it is, however, desirable that the stipulations of the various agreements be equalized as much as possible. This applies not only to wage rates but also to all other subjects regulated in collective agreements. Provisions that have stood the test and make for efficiency should as far as possible be incorporated in all the agreements, while provisions that are out of date and have proved impracticable should be avoided. This can, however, only be accomplished by a central office in which all collective agreements concluded in Germany are gathered and arranged for easy and ready reference for interested parties. A number of employers' and workers' organizations have to a larger or lesser extent been active in gathering such material. As commendable as such activities may be they can at the best only cover the collective agreements coming within the sphere of organization of the individual federations, and do not make superfluous a centralized collection. Such private activity of interested parties, moreover, can never render the same service as an official archive. Moreover, only such a non-partisan institution will enjoy among all social classes that measure of confidence which is required when the furnishing of reliable documentary bases for the settlement of labor disputes and the conclusion of collective agreements comes in question.

¹ Reichs-Arbeitsblatt. Berlin. Sept. 25, 1919, p. 691.

² MONTHLY LABOR REVIEW, April, 1919, pp. 158-160.

³ Idem, pp. 160-167.

In view of these considerations the bureau of labor statistics in the German statistical office, which is charged with the annual compilation of statistics on collective bargaining has established an archive for collective agreements (Tarifarchiv) which will try to gather and arrange for reference all agreements concluded in Germany at the earliest possible date after their conclusion. This archive is not to be confounded with the collection of legally binding collective agreements which is maintained by the Ministry of Labor as an adjunct of the register of collective agreements and embraces only a small number of such agreements. The archive in the bureau of labor statistics will contain not only the legally binding but the great mass of all the other collective agreements. In September, 1919, it had already collected 2,500 agreements newly concluded during that year.

EMPLOYMENT AND UNEMPLOYMENT.

Employment in Selected Industries in December, 1919.

THE Bureau of Labor Statistics received and tabulated reports concerning the volume of employment in December, 1919, from representative establishments in 13 selected industries. Comparing the figures of December, 1919, with those of identical establishments for December, 1918, it appears that in 10 industries there were increases in the number of persons employed. The largest increase, 26.9 per cent, appears in automobile manufacturing. Three industries show decreases, the largest being 25.8 per cent in car building and repairing and 21.6 per cent in iron and steel.

Eleven of the 13 industries show an increase in the total amount of the pay roll for December, 1919, as compared with December, 1918, and 2 a decrease. Percentage increase of 96.4, 58.7, 48.8, and 44.9 appear in men's ready-made clothing, woolen, silk, and automobile manufacturing, respectively. A decrease of 22.8 per cent is found in car building and repairing, while iron and steel shows a decrease of 22 per cent.

COMPARISON OF EMPLOYMENT IN IDENTICAL ESTABLISHMENTS IN DECEMBER, 1918, AND DECEMBER, 1919.

Industry.	Establishments reporting for December, both years.	Period of pay roll.	Number on pay roll in December—		Per cent of increase (+) or decrease (—).	Amount of pay roll in December—		Per cent of increase (+) or decrease (—).

Woolen.....	46	1 week....	32,298	39,864	+23.4

Comparative data for December, 1919, and November, 1919, appear in the following table. The figures show that in 10 industries there was an increase in the number of persons on the pay roll in December as compared with November, and in 3 a decrease. The greatest increase, 18.3 per cent, is shown in iron and steel, while a decrease of 10.2 per cent appears in men's ready-made clothing.

When comparing December, 1919, with November, 1919, 12 industries show an increase in the amount of money paid to employees and 1 shows a decrease. The most important increases, 23.7, 22.8, 20.3, and 17.9 per cent, appear in cotton manufacturing, iron and steel, cotton finishing, and woolen. Automobile manufacturing shows a decrease of 5.5 per cent.

Changes in Wage Rates.

IN ALL of the 13 industries there were establishments reporting wage-rate increases during the period November 15 to December 15, 1919. Of the establishments reporting, many did not answer the inquiry relative to this item, but in such cases it is not likely that changes were made.

Automobile manufacturing.—One plant granted an increase of 3 per cent to 12 per cent of the employees. Three per cent of the men in one concern received a 2 per cent increase. One establishment reported increases to 25 individuals but gave no further data, and another firm gave some small increases but made no other statement.

Boots and shoes.—One concern gave an increase of $16\frac{2}{3}$ per cent to $23\frac{2}{3}$ per cent of the employees. Two firms reported a 15 per cent increase affecting about $33\frac{1}{3}$ per cent of the force in one plant and the cutters and fitters, or about 32 per cent of the men, in the other. An increase of 10 per cent was granted by five establishments, affecting all of the men in one, 68 per cent of the force in another, $66\frac{2}{3}$ per cent of the employees in the third, and one-fourth of the workers in the fourth, while the fifth plant did not state the number of persons affected. In one concern $21\frac{1}{2}$ per cent of the employees received an increase of about 7 per cent. All of the outside cutters in one firm received an increase of one-half cent per pair.

Cigar manufacturing.—One establishment reported an increase of 10 per cent, affecting 78 per cent of the employees.

Men's ready-made clothing.—One establishment reported a 25 per cent increase throughout the plant. One concern gave a 20 per cent increase to 40 per cent of the employees. Eighty per cent of the employees in one firm received a 15 per cent increase. Three men in one plant were given an increase of \$6 a week and 75 per cent of the men received an increase of \$5 per week. Two establishments granted a \$5 increase, affecting all of the employees in one plant and 81 per cent of the men in the other; the second plant also gave an increase of 1 cent per piece to the remainder of the force. An increase of 10 per cent, affecting 50 per cent of the employees, was given by one concern. One plant gave an increase of 3 per cent to 6 per cent of the force.

Cotton finishing.—All of the employees in four plants received an increase of $12\frac{1}{2}$ per cent. Six concerns granted an increase of $12\frac{1}{2}$ per cent, affecting 95 per cent of the help; and one of these firms also gave a $6\frac{1}{4}$ per cent increase to 5 per cent of the force. Six per cent of the employees in one plant received an increase of 0.139 per cent. Another concern gave increases of 12 cents, 5 cents, 4 cents, and 3 cents per hour affecting the printers, 21 per cent of the females, all of the men, and 79 per cent of the females, respectively.

Cotton manufacturing.—One establishment reported an increase of 14 per cent affecting all of their employees. All of the men in 21 plants received an increase of $12\frac{1}{2}$ per cent. Three plants gave a $12\frac{1}{2}$ per cent increase but did not state the per cent of the force affected. One mill gave all of the force a 12 per cent increase. An average increase of 9 per cent, affecting all of the employees, was given by one concern.

Hosiery and underwear.—Increases ranging from 15 to 20 per cent, affecting all of the employees was given by one concern. Five plants reported an increase of $12\frac{1}{2}$ per cent to all of the force. One establishment gave a $12\frac{1}{2}$ per cent increase but did not state the number of men affected.

Iron and steel.—An increase of 10 per cent to 6 per cent of the force was given by one plant.

Leather manufacturing.—All of the men in one establishment received an increase of $12\frac{1}{2}$ per cent, and another concern gave a \$2 bonus to all full-time workers (90 per cent of the force).

Paper making.—All of the employees in one concern were given a 10 per cent increase, and about 88 per cent of the men in another plant received an increase of about 10 per cent. A 6 per cent raise, affecting 6 per cent of the employees, was reported by one establishment. Every man in one mill was advanced 50 cents per day.

Silk.—One establishment granted increases ranging from 15 to 20 per cent affecting all of the pieceworkers, and gave increases ranging from 10 to 15 per cent to all time workers. All of the employees in one firm received a $12\frac{1}{2}$ per cent increase. Four plants reported an increase of 10 per cent affecting the entire force in two mills, 66 per cent of the force in another mill, and 50 per cent of the employees in the fourth establishment. One concern gave an increase of $0.06\frac{2}{3}$ per cent to 0.087 per cent of the force and a $12\frac{1}{2}$ per cent increase to 0.101 per cent of the men. Ninety-five per cent of the workers in one concern received a 9 per cent increase and all of the force in another mill were granted an increase of $8\frac{1}{2}$ per cent. The weavers, or about 70 per cent of the employees, in one establishment were advanced 5 cents per hour.

Woolen.—Thirty establishments gave increases ranging from $12\frac{1}{2}$ to 20 per cent to their employees. An increase of $12\frac{1}{2}$ per cent, affecting all of the force, was granted by 13 firms. One plant gave a $12\frac{1}{2}$ per cent increase to 99 per cent of the men. Two concerns gave increases to all their employees, but did not state the amount of the increase, and two establishments reported increases, but made no further statement.

Provisions for Employment of ex-Service Men.

United States.

WITH the signing of the armistice and the accompanying prospect of an immediate return to the United States of the American forces, their proper placement in industry became an engrossing question. The War Department felt that some means other than the existing employment agencies which dealt with employment generally were necessary in order to secure information regarding possible vacancies.

Accordingly a scheme having for its object the proper placement of ex-service men in industry was instituted by the Service and Information Department of the War Department, and was operated from March 3 to September 20, 1919, when, upon the resignation of Col. Arthur Woods, who had the reemployment work in charge, it was transferred to the War Plans Division of the General Staff, where it is now being carried on under the direction of Maj. Gen. William G. Haan, Assistant Chief of Staff.

The importance of work of this character being done by the War Department was later emphasized when the United States Employment Service, which had endeavored to meet the situation of placing the discharged soldier as adequately as possible in conjunction with

its general work, was, through lack of funds, forced to suspend many of its activities and depend upon State and local agencies for information regarding the status of employment throughout the country.

In order to facilitate the carrying out of the scheme, the United States was divided into four districts, with Washington as a central office, and with a branch in each district as follows: Boston as a center for the New England States; New York for the Middle Eastern States; Indianapolis for the Central States; and San Francisco for the Western States. Recently the New England and Middle Eastern branches have been consolidated. No branch was established in the South, the reason given being that the South has no unemployment problem. South Carolina, for instance, reports that she has reabsorbed her 50,000 returned men and could use more.

The War Department has no employment agencies of its own in these districts, but has striven to establish cooperative arrangements with all of the soldier job-hunting agencies in each town or city. As a result the local employment offices of all kinds—War Camp Community Service, Bureaus for Returning Soldiers, Sailors, and Marines; Salvation Army, Y. M. C. A., American Red Cross, Knights of Columbus, National Catholic War Council, Boy Scouts of America, and Jewish Welfare Board—are all cooperating with the War Department in an effort to place every ex-service man in satisfactory employment.

In addition to furnishing buildings, office furniture, and paid employees, these local offices and welfare organizations have contributed generously of their funds and of their time. They also make weekly reports on the applications for work received and the placements made. The American Legion also is putting its strength behind this movement, and reports from various parts of the country show that it is rendering efficient aid in placing ex-service men.

The department keeps in touch with these local agencies, and through them with the labor situation in each district, by means of a force of traveling representatives, composed of 30 officers and 12 civilians, who travel from town to town enlisting cooperation with local agencies, supervising the work, and giving all possible assistance to ex-soldiers, especially in those places where unemployment is the greatest.

As a part of the headquarters work a special service was instituted which undertakes to furnish technical ex-service men located in Washington, or those coming to the city, with employment. The scope of this work has gradually extended to cover men and places in the various districts, so that now when a firm makes a requisition for a man having certain qualifications the office selects, from the soldiers' personnel cards, a man whose training and experience satisfy

the requirements, and he is immediately notified of the opportunity for work. In many of these instances, moreover, the office is able to certify a man from the same part of the country from which such a request comes, and thus the additional advantage is gained of placing a man near his home. On the other hand, in many cases firms are notified of available men in their vicinity.

To stimulate the interest of employers in the employment of soldiers, what is known as the Legion of Patriotic Employers was organized. Included among such employers are "merchants, manufacturers, corporations, tradesmen, city governments, farmers, professional men, banks, insurance companies, newspapers, storekeepers, railways, private individuals, and all concerns, great and small, who have put themselves down in writing with the Assistant Secretary of War as agreeing to take back every man who left them to serve in the war."

To every employer making this promise the War and Navy Departments issue a certificate signed by the Secretaries of War and Navy and bearing the seal of the United States, the American eagle, and the name of the firm. On December 15, 1919, 62,964 of these certificates had been issued to employers throughout the country.

On October 1, 1919, about 20,000 men remained unplaced. Between that date and November 1 this number was increased by 90,000 officers and men who had been discharged during that period. If past experience holds good 80 per cent of this latter number will go back to their old jobs, which leaves 38,000 still to be placed—a large problem.

Releases from the War Department for December 1, 1919, summarize the soldier employment statistics secured by the Service and Information Branch as follows: In eight representative cities of the New England district 1,642 ex-service men out of 2,708 seeking employment were placed in positions. Boston, with 1,265 men seeking work and 594 placements, represented one-half of this unemployment. Thirty-seven cities in the Eastern States reported for the same period 15,315 men applying for work and 9,513 placements, the relative number of placements having greatly decreased during November. New York City for the last week reported on had 2,318 applicants and 1,192 men placed, or about 50 per cent. In 58 cities of the Central States 12,408 ex-service men were placed out of 16,125 applying for work, leaving 3,717 unplaced, as against 4,518 in October, showing an improvement in the number of placements made in this district, though the number registering for employment was higher than in the preceding month. The Pacific Coast States reported difficulty in placing all the discharged men of that district in suitable employment. In 21 cities of that district 7,172 men registered for work during the month of November and 4,913 were placed, San Francisco showing the largest proportion of unemployment.

What Some of the States Have Been Doing.¹

INDIVIDUAL States, especially since the forced suspension of much of the work of the Federal Employment Service, have endeavored as far as possible to place in employment their own citizens who had entered the service. This was accomplished in some cases by means of State legislation, but generally through a continuance of the Federal Employment Service in conjunction with State and local employment agencies and the cooperation of the local councils of national defense and welfare organizations of all kinds.

State legislation providing for the placement of ex-service men, while confined to a limited number of States, covers a rather wide range of method, no two States making quite the same provision. A number of States, among them Illinois, Massachusetts, Minnesota, New Jersey, New York, and Pennsylvania, enacted legislation restoring ex-service men to civil-service positions or giving them preference in municipal and other public works. Connecticut, Delaware, Rhode Island, and Minnesota allow peddling without licenses. The Indiana Legislature enacted a law (S. B. 306) creating a board of seven members, known as the employment commission of Indiana, one section of which in cooperation with the Federal Board for Vocational Education is endeavoring to secure employment for ex-service men. Illinois also has a commission with wide powers for obtaining employment for soldiers. A Preference of Employment Act (chap. 253, Acts of 1919) passed by the Massachusetts Legislature gives preference to discharged soldiers and sailors "in the employment of mechanics, teamsters, and laborers in the construction of public works by the Commonwealth or by a county, city, town, or district, or by persons contracting therewith for such construction."

It has been the duty of the Missouri Soldiers' and Sailors' Employment Organization, created by legislative enactment, to assist ex-soldiers and ex-sailors to obtain employment, to interview former employers of ex-service men as to their reasons for failure to reemploy such men, and to make a public report of their investigations to the governor. The Veterans' Welfare Commission of Montana, approved March 4, 1919, in its effort to educate and place returning soldiers, may "establish employment agencies, furnish employment, provide institutions, assist the United States in reclamation or reconstruction work, make grants or loans, and expend the funds entirely in the discretion of the commission." One hundred thousand dollars was appropriated by the Oregon Legislature to finance a commission

¹ Data taken largely from information furnished by the American Red Cross, Come Back, Nov. 8, 15, 22, and 29, and from U. S. Council of National Defense, Readjustment and Reconstruction Information, Part II. Washington, D. C. (In press.)

of five members, called the soldiers' and sailors' commission, whose duty it shall be to spend this sum as it deems best in assisting honorably discharged soldiers and sailors and marines to obtain employment and in such other ways as will best promote the interests of the men, while Rhode Island appropriated \$9,550 for the maintenance of free employment offices for discharged soldiers and sailors and other unemployed in such centers as the governor selects.

As early as January 25, 1919, California appointed a State committee on soldiers' reemployment readjustment to succeed to the activities of the State council of defense. In addition to concentrating upon the placement of soldiers, accelerating the payment of allotments, controlling relief collections, and carrying out an Americanization program, the committee operating through 58 county divisions of the council of national defense has sent requests to mayors, chambers of commerce, and other organizations, asking them to form placement or readjustment committees. In addition the committee made out the quota of returning soldiers for each county so that each could know just what its obligation was. Surplus and shortage of labor were also revealed by this means and men seeking jobs were sent to places where work was available. California has in operation a successful land settlement scheme, one of the few not in some way dependent upon proposed Federal aid and giving preference to the honorably discharged soldier, sailor, or marine. North and South Dakota and Colorado also have independent land settlement schemes.

A sum of \$500,000 was appropriated by the Legislature of the State of Washington to assist ex-service men back to civil life. The fund is administered by the veterans' welfare commission, which may use it in the manner best suited to carry out the purposes of the appropriation. To this end the commission may establish employment agencies, provide for institutions, and make grants and loans. New Jersey created a nonsalaried State employment bureau to act in cooperation with the Federal Government in furnishing employment for men discharged from the service.

A number of States have provided through legislative enactment for the vocational rehabilitation and training of ex-service men, and have provided free tuition in State universities as a preparation for future employment.

What may be termed private means taken in the various States, cities, and towns throughout the country to solve ex-soldier unemployment problems are almost too numerous to mention. In many places councils of national defense took over the work of the Federal Government along this line. Welfare organizations, such as those cooperating in the War Department scheme previously outlined, have used every facility at hand to carry on this important work. Sys-

tematic canvasses of factories and business houses have been made to obtain jobs for men discharged from the forces. Governors have called on employers to reemploy all employees. Many States and cities have assisted men financially until they found employment. Citizen committees have given their services and the means to keep up existing local agencies or to create new ones. Special courses in vocational education have been offered to train men for certain lines of employment and many universities are giving free tuition.

A fine spirit is manifested in many of these local agencies. Placement is not merely a matter of furnishing a man some sort of job. An effort is being made to make each case, as far as possible, a personal matter, and from a consideration of the circumstances surrounding each case to place each man in the right job. Reports from various parts of the country, however, show that even all these agencies are not adequately meeting the situation, and that while a sincere effort has been made to meet the soldier unemployment problem, much undoubtedly still remains to be done.

Belgium.¹

THE text of a law, dated October 24, 1919, dealing with the reengagement of demobilized soldiers, appears in the *Moniteur Belge* of October 31. Among the principal provisions of this measure are the following:

Where a contract of service existed between an employer and a man called to the colors, and the period of the contract was not stated, the soldier, on his return to civil life, can demand to be reinstated in the position formerly held. Mobilization, in short, can not be considered as a reason for the breaking of a contract of service. Application for reinstatement must be made within two weeks of the man's demobilization, or, if he should be suffering from wounds or sickness, within two weeks from his recovery. For men already discharged, this period is extended to one month from the date of publication of the law.

If such reasons exist as the destruction of the works, lack of machinery, raw materials or orders, disablement of the worker, etc., the employer can not be forced to reinstate a man in the position formerly held, but if there is a similar suitable post vacant he is bound to offer this. If the hindrances to reinstatement are temporary in nature the employer is bound to reengage the ex-soldier when these are removed.

The rate of remuneration of a reinstated worker must be the normal wage currently paid to workers of the same category, and not less

¹ Data from *The Labour Gazette*, London, December, 1919, p. 517.

than the rate he was receiving before being called up for military service.

During the year following his reinstatement, a demobilized workman is entitled to three months' notice of dismissal, unless there is a recognized legal reason for breaking the contract of service, or unless a longer period is customary.

Employers may not allege, as a reason for noncompliance with the demand for reinstatement, that a contract of service has been made with a worker or workers who replaced the man when he was mobilized.

If the contract of service at the time of mobilization was for a specified period of time, then, instead of a demand for reinstatement, the man is required simply to notify his employer of his return to civil life, or of his cure within two weeks after demobilization or discharge. Where the length of the unexpired period of contract is less than three months the date of termination shall be postponed for an unspecified period, should the man so demand.

Germany.

ACCORDING to the British Labour Gazette for November, 1919 (p. 468), the order of January 9, 1919, providing that all public and private establishments, offices, and administrations should engage at least 1 disabled ex-soldier for each 100 persons employed, including officials, salaried employees, and manual workers of both sexes, has been amended by a subsequent order, dated September 24, 1919, which provides that 1 disabled ex-service man shall be engaged where the number of persons employed is 25 or over and not more than 50, and 1 in addition for each further 50.

As applying to agricultural undertakings, the original order provided that 1 disabled man was to be employed in every 50 persons engaged, and this has been repealed.

A disabled person is described as one who is in receipt of a military disablement pension amounting to 50 per cent or upward of the full pension.

Overcoming Opposition to Physical Examination of Workers.

THERE is a growing attitude of opposition among labor unions to the physical examination of industrial workers, according to Dr. C. D. Selby in an article on "Reclaiming the physical examination of industrial workers," published in *Modern Hospital*

for December¹. The author divides the problem presented by this attitude into three phases and analyzes the phases in their practical relations to the workers, the employers, and the industrial physicians. It is the latter, however, upon whom he places the responsibility for the existence of conditions which have led to this attitude as well as for readjustments which would bring about a more generally effective medical examination and supervision service, the value of which they should demonstrate to both employers and employees.

The reason for the opposition of the labor unions to physical examinations is ascribed to the rejection of applicants for employment, rejections having been the only effect of such examinations which the unions seem to have observed. Dr. Selby believes that physicians are partly responsible for this, since they have not measured up to what industry was led to expect of them in the way of fitting men to their jobs and helping them to correct physical defects. Consequently, the outstanding result has been the rejection of those who were deemed physically disqualified. "Inasmuch as physical examinations are essential to the betterment of health among working people, efforts to offset this growing antagonism would seem to be not only justified, but urgent as well; otherwise the whole movement of industrial health supervision may fall."

It is suggested that the first step in settling the problem is to satisfy the unions. This would require:

First, that the number of rejections be reduced to the minimum; and second, that means be provided for (a) the industrial rehabilitation of the essential "rejects" capable of restoration, and (b) the pensioning or institutionalizing of those who are not.

To reduce the number of rejections it is imperative that industry be induced to absorb more of the physically handicapped workers than it now does, which is difficult to accomplish. In the first place, compensation acts tend to place full responsibility upon employers for the results of injuries to such workers even though preexisting conditions may have been largely responsible. Furthermore, handicapped workers may or may not be competent, depending upon (a) the skill of physicians in interpreting their physical values, (b) the judgment of employing officers in assigning them to jobs, (c) the special facilities they are furnished for work, and (d) the quality of supervision they work under. In other words, handicapped workers require special and unusual attention and facilities in order that their labor may be used with advantage and to the profit of their employers. Few employers care to go to this effort and do not attempt to if they can maintain their working forces without.

Under existing conditions only a shortage of labor will induce the average employer to hire handicapped workers, declares the author, but he thinks that if employers could be assured of relief, in case of injury, from the whole responsibility of end results due to preexist-

¹ Reclaiming the physical examination of industrial workers, by C. D. Selby, formerly consulting hygienist, United States Public Health Service. In *Modern Hospital*, Chicago, December, 1919, pp. 528-530.

ing conditions, they would be willing to hire physically defective workmen. In order that the number of rejections be reduced, compensation acts must be "so modified as to relieve employers from at least a part of the responsibility of results of injuries that are influenced by conditions beyond their control and for which the employees themselves are responsible."

The second phase of the problem is to make it easier for employers to utilize the labor of handicapped workers to advantage and with profit. The greatest responsibility in dealing with this phase lies with the physicians, and the author thinks that, in general, physicians have, so far, fallen short of fulfilling possibilities open to them for the greatest service; that "industrial physicians recognize and believe in the theory of fitting men to their jobs, but fail in the majority of instances in its application."

Industrial physicians must demonstrate to their employers that not only handicapped workers may be competent if properly employed, but that likewise all workers will be more competent if they also are fitted into jobs they are physically adapted to.

At the present time it is doubtful if physicians are prepared to do this, for something more than a mere conception of physical values is required, and this is a knowledge, a very intimate knowledge in fact, of working conditions. Industrial doctors must be prepared to advise intelligently and convincingly on the hiring and placing of all employees whether impaired or normal, and to do so they must study each operation in their plants, classifying and codifying the physical requirements of each so that their knowledge of working conditions is instantly available.

Studies of this nature need not be of an ultra-scientific character. On the contrary a few simple observations are all that are necessary. For example, consider the physical requirements of iron molding in a fairly dusty foundry. The workman must have (1) no disease of the respiratory tract, (2) no heart or vascular disease, (3) no hernia; he must be (4) 5 feet 8 inches tall, and (5) fairly strong (as indicated by his musculature); he must have (6) good back action (for lifting), and (7) sound extremities. Then take the man in the same foundry whose business it is to weigh the castings. About the only requirement to be expected of him is that he have sufficient eyesight to read the scales. He could be ruptured, have high blood pressure, and what not—it matters little.

The third phase of the problem suggested by Dr. Selby is concerned with the physical supervision of the handicapped workers after they are placed. The men should be looked up from time to time by the physician to see what effect the work has on them. Not only does this enable physicians to advise handicapped workers if they are doing harm to themselves, but it enables them to do their own work more competently. It is suggested, in this connection, that examining physicians should be expected to spend some time each day in their plants for the purpose of observing impaired workers at their work. Such workers should be required to report for further

examination occasionally, particularly in connection with their impairment.

The writer touches on the subject of the industrial rehabilitation of essential "rejects" capable of restoration and of the pensioning or institutionalizing of those who are not, commending to students of sociology and particularly to those who are interested in the sociological phases of hospital work the problem presented by this subject. Dr. Selby's conclusions are as follows:

Two essential thoughts concerning industrial physicians have developed out of this brief study. They will be emphasized in closing. The first is that the doctors of industry must study working conditions and apply the information they gain therefrom to the practical fitting of men to their jobs. The other is that industrial physicians must, absolutely must, exercise more in the way of physical supervision after the men get on their jobs. These two measures are imperatively necessary if the physical examination is to be saved from the antagonism of labor, and as a matter of fact they are quite essential to the proper pursuit of industrial hygiene. The opposition of labor should not be required to stimulate physicians to do what is very properly their self-assigned but greatly neglected task.

Effect of Employment of Mothers Upon Sickness Among School Children.

LACK of supervision of the child owing to the mother being employed away from home is cited by Dr. G. W. N. Joseph, school medical officer of the borough of Warrington (England), as the one cause which was especially responsible for noticeable increase in the number of minor ailments and the length of time necessary for their cure among the children attending the schools of Warrington last year, according to an article in *The Medical Officer*¹ (London). Referring to Dr. Joseph's report, upon which the statement is based, the article continues:

In inquiring into the results of the employment of mothers the infantile mortality and sickness returns do not help much, because the infant is probably less affected than any other member of the family. In Warrington, at any rate, it appears that as many as 84 per cent of the women stay at home for a minimum of three months to breast feed the child from its birth. More than this, when the mother does leave home she arranges for some responsible person to look after her infant, and, if necessary, pays for this to be done. It is the older child that suffers most from this lack of attention, for the older a child is the more it has to shift for itself. In rare cases only, when the mother goes out to work, are hot meals provided at midday, and the children generally have to forage for themselves and make a meal of such things as bread and butter or jam, meat pies, fruit tarts, and cake. Adult members of the family, too, suffer

¹ Industrial employment of mothers. In *The Medical Officer*, London, Nov. 22, 1919, p. 190.

in this respect. The effect on the nutrition of the child has been marked to a large extent by the increased family income enabling a higher standard of living to be reached, but this increased income was due more often to State allowances than to the earnings of the mother.

Dr. Joseph therefore considers it is not surprising, seeing that the number of mothers employed in industry reached a maximum in 1918, that the number of children suffering from minor ailments should be larger than previously, and the time taken to cure the home treatment cases was nearly twice that of the previous year. He urges that something must be done to prevent the mother from engaging in work away from her own home if any real social progress is to be made. Definite prohibition of employment of women with children is not necessary, but our policy must be to make it easy for the mother to stay at home as opposed to the policy of making it easy for her to engage in industrial work. Dr. Joseph makes the interesting suggestion that possibly legislation is needed to secure that a mother should be entitled to a proportion of the husband's earnings to enable her to look after the home and children when she is capable and willing to do so. Undoubtedly, where the mother is a widow, deserted, or the wife of an invalid husband, the desirability of some form of mother's or, rather, child's pension requires consideration. The multiplication of institutions such as creches or day nurseries, however essential they were during the war, can not be in the best interests of the nation. As Dr. Joseph says, the basis of all public health must be to give the people healthy homes, to teach them to lead healthy lives in those homes, and to arrange that there is a sufficient income for every family to enable the mother, or, where there is no mother, some other responsible person, to remain in each home to look after the little ones.

Unemployment and Unemployment Relief in Germany and Austria.

Germany.

DEUTSCHER Reichsanzeiger,¹ the official German gazette, publishes the following data as to changes in the general level of employment and unemployment in Germany during September and October, 1919:

The premature commencement of cold weather, the ending of the harvest season, the suspension of building operations, the increased shortage of coal, transport difficulties, numerous stoppages of work, and the continued return of war prisoners and refugees from occupied territories and territories to be surrendered, have all combined to put a considerable strain on the labor market. This is shown primarily by increased unemployment.

According to returns from 32 trade-unions, covering in the aggregate 4,256,398 members, 110,626 (2.6 per cent) were out of employment at the end of October, 1919, as compared with 2.2 per cent in September of the same year and 0.7 per cent in October, 1918. Unemployment among men increased from 1.7 per cent in September to

¹ Deutscher Reichsanzeiger. Berlin, Dec. 1, 1919.

2.3 per cent in October, chiefly in consequence of the suspension of building operations and the unsuccessful strike of the Berlin Metal Workers. Among women, unemployment decreased from 4.1 per cent in September to 3.9 per cent in October, principally on account of the improvement in the textile industry.

The number of persons in receipt of unemployment relief in 97 cities dropped from 234,242 (of whom 164,544 were males and 69,698 females) on September 27, 1919, to 218,695 (158,409 males and 60,286 females) on November 1, 1919. As, however, no returns on the situation on November 1 had been received from Hamburg, Munich, and several other large cities, care must be taken in using these figures.

Returns relating to employment exchanges in October show that for every 100 vacant situations for men there were 150 applicants, as against 143 in September; in the case of women the applications numbered 115 as against 116 in September. Applications by men have therefore increased considerably since the preceding month, whereas those made by women were slightly fewer. There is a continued demand for labor in the mining industry. For every 100 vacancies there were 52 male applicants in October as compared with 40 in September. A shortage of labor was also experienced in agriculture, where, for every 100 vacancies there were 88 male applicants as compared with 81 in September, and 44 female applicants as compared with 37 in September. In commerce there was a large surplus of labor; for every 100 vacancies there were 430 male applicants (459 in September), and 287 female applicants (277 in September). Considerable improvement in the labor market of the textile industry was shown by the fact that the number of male applicants for every 100 vacancies dropped from 410 in September to 277 in October, while in the case of women the number of applicants decreased from 402 in September to 287 in October.

The *Börsen-Zeitung*¹ reports a further decrease of unemployment in Berlin during September and October, 1919. The following table shows the number of unemployed at the beginning and end of these two months.

UNEMPLOYMENT IN BERLIN, SEPTEMBER AND OCTOBER, 1919.

Item.	September, 1919.			October, 1919.		
	Men.	Wom- en.	Total	Men.	Wom- en.	Total.
Number of unemployed—						
At the beginning of the month.....	71,000	24,000	95,000	61,000	20,000	84,000
At the end of the month.....	64,000	20,000	84,000	59,000	17,000	76,000
Number placed in situations during the month.....	17,000	7,500	24,500	13,500	6,500	20,000
Number of unemployed added to register during the month.....			13,500			12,000

¹ *Börsen-Zeitung*. Berlin, Oct. 12 and Nov. 16, 1919.

The total amount paid out for unemployment relief was 12,000,000 marks¹ in September and 8,000,000 marks in October.

In Saxony the number of unemployed is decreasing almost everywhere, according to the *Münchener Neueste Nachrichten*.² Strikes have decreased in number and duration. There is a growing tendency to settle disputes by negotiation or arbitration. It is only in the metal industry that great difficulties exist. A growing sense of duty is noticeable, one proof of which is seen in the decision to work on Sundays in all lignite pits in Saxony. Even among the workers themselves, a return to piecework is supported on condition that a certain minimum wage is guaranteed. Only the workers in the railway workshops are opposed to piecework. The trade-unions do not oppose the piecework system on principle, and in many industries it has been reintroduced to the satisfaction of all concerned.

The extent of unemployment in Saxony during July, August, and September, 1919, is shown in the following table:

UNEMPLOYMENT IN SAXONY, JULY, AUGUST, AND SEPTEMBER, 1919.

Unemployed.	July.	August.	September.
Men.....	70,636	67,874	59,931
Women.....	55,652	56,989	48,272
Persons under 21.....	11,255	11,911	7,875
Total.....	137,543	136,774	116,078

The *Frankfurter Zeitung*³ reports that in September the labor market in Frankfort on the Main was favorably influenced by several circumstances, including the gardening exhibition and the preparations for the fair. The reinstatement of returned prisoners of war is proceeding smoothly on the whole without burdening the open market. According to official figures about 1,500 prisoners whose place of residence is Frankfort had returned up to the end of September. The number of persons in receipt of unemployment grants decreased by 33 per cent during September, or from 5,600 in August to 3,772 in September, 1919. Work was found for 12,085 persons through the municipal employment office, as against 10,572 in August. Agricultural workers were much in demand. Skilled workers for the metal industry and for the woodworking and building trades were also in demand and in the printing trade conditions have much improved. In commerce and industry there was a demand for young people. In the case of women, the number of industrial workers has decreased. There is a considerable demand for expe-

¹ In view of the unsettled condition of foreign exchange sums of German and Austrian money in this article are not converted into their equivalents in American money.

² *Münchener Neueste Nachrichten*. Munich, Oct. 30, 1919.

³ *Frankfurter Zeitung*. Frankfort-on-the-Main, Oct. 17, 1919.

rienced stenographer-typewriters, but, on the other hand, the market is flooded with average and badly-trained workers.

New Regulation of Unemployment Relief.

IMMEDIATELY after the signing of the armistice, namely on November 13, 1918, the German Government issued an order regulating the payment of unemployment grants.¹ Under this order the communal authorities were required to pay unemployment benefits to residents who were without employment. One-half of the expenditure incurred by the communes was to be refunded by the central Government and one-third by the government of the particular State concerned. Various abuses were soon found to exist in connection with the above-named order, which was amended by one dated January 15, 1919. Under this measure the communes were required to refuse or withdraw unemployment benefit if the unemployed person refused to accept work offered to him. Furthermore, maximum rates of unemployment benefits were fixed in the order. These were not to exceed one and one-half times the daily rate of pay of unskilled labor as ascertained in accordance with the provisions of the Workmen's Insurance Code to be locally current, nor the maximum rates of relief prescribed for each locality according to certain district classes, arranged in connection with the rent allowance of Government officials, based on local variations in the cost of living. These district classes were divided into four groups, A, B, C, and a fourth group including both D and E, the unemployment relief rates for adult men ranging from 6 marks per diem in district class A, to 3.5 marks in district class D and E.

A further order dated April 16, 1919, amalgamated the two earlier orders and added further provisions in matters of detail.

The *Deutscher Reichsanzeiger*² contains an order dated October 27, 1919, issued by the German Minister of Labor amending in certain respects the regulations as to payment of unemployment relief contained in the order of April 16, 1919, and making the following additional provisions:

Grants from national or State resources to communes or unions of communes in refund of sums expended by them for unemployment relief may in future be withheld where the rate of relief exceeds the maximum laid down in the order of April 16, 1919.

If an unemployed person accepts a situation in which the full normal rate of pay can be earned only after a certain degree of familiarity with the processes, etc., has been acquired, the authorities of the place in which the person in question last resided are authorized

¹ See MONTHLY LABOR REVIEW, September, 1919, p. 170.

² *Deutscher Reichsanzeiger*. Berlin, Oct. 29, 1919.

to grant an allowance from their unemployment relief fund, for a period not exceeding six weeks, to supplement such earnings, provided the earnings do not exceed the rate of unemployment relief by more than one mark per day. The amount granted must not exceed the difference between the wages and the daily rate (increased by one mark) of the unemployment relief.

In localities belonging to the district classes A and B referred to above, the municipal authorities are empowered to grant to unemployed persons over 18, who for 60 days or more during the preceding three months have been in receipt of the full unemployment relief, a special additional "winter relief" from their unemployment funds, during the period from November 1, 1919, to March 31, 1920. The amount of such grant per month shall be equal to four times the daily rate of unemployment relief for persons out of work who have families dependent upon them and three times for other persons.

The central authorities of the individual States may authorize the payment of this "winter relief" in localities other than those situated in district classes A and B.

The national minister of labor is empowered to make grants to communes in aid of measures which have for their object the reduction of unemployment; the cost of such grants is to be borne by the national treasury, the State and the communes in specified proportions.

According to official statistics, the unemployed in Germany have received in the form of unemployment relief, from the revolution up to October 4, 1919, a total sum of 4,500,000,000 marks.¹ In the period from December, 1918, to September, 1919, the city of Leipzig has paid out in all 42,500,000 marks for unemployment relief, while the total sum spent for the same purposes during the three-year period 1915-1917 did not amount to 3,000,000 marks.²

Austria.³

ACCORDING to the latest estimates there are 96,000 unemployed persons in Vienna. This number, for a city with somewhat more than 2,000,000 inhabitants is alarmingly high, even though it has dropped since the days of the revolution, when the figure was 135,000. The degree of unemployment can best be realized when this is compared with the figure for the whole of lower Austria (exclusive of Vienna), which is barely 17,000. Nonmanual workers form the bulk of the unemployed, and of these the highly qualified employees are chiefly concerned. Former officials and private salaried employees in commerce are particularly affected, and have not the slightest

¹ Frankfurter Zeitung. Frankfort on the Main, Oct. 12, 1919.

² Münchner Neueste Nachrichten. Munich, Oct. 30, 1919.

³ Der Morgen. Vienna, Oct. 22, 1919.

hope of finding employment in their former occupation. The authorities in charge of unemployment relief, in conjunction with the Vienna Workers' Council, are endeavoring to formulate a scheme to enable these workers to utilize their previous experience in productive work.

A demand has been made on the Government that a new order should be issued at once which would place employers under the obligation to reinstate 20 per cent of the unemployed in their former situations. A previous order in this respect had not been complied with. The workers' council is to supervise the carrying out of the new order. The necessity for converting nonmanual into manual workers has been recognized.

The unemployed complain that the unemployment benefits paid are totally inadequate to meet the present cost of living. Representatives of the unemployed conferred with Secretary of State Hanusch. They did not demand an increase of the pecuniary unemployment benefits, but asked that the food ration should be increased by 50 per cent. Herr Hanusch explained the difficulties which this would involve, and the increase was not granted because the Government had already granted large subsidies, as follows: For bread alone, up to the present, 300,000,000 crowns; for meat 500,000,000 crowns; and for sugar 780,000 crowns daily.

The agreement between France and Austria concerning the employment of Austrian workers in the north of France will soon be signed. The communists are opposing the sending of workers to France and are working up public opinion in favor of sending the unemployed to Russia, where 800,000 workers are needed. The unemployed are also demanding that they shall be supplied with clothing and footwear during the winter months. This has been refused, as it would involve an expenditure of 100,000,000 crowns, and the State in its present financial condition can not undertake such expenditure.

CHILD LABOR.

Child Labor and the War.

HOW the barriers against child labor were let down during the war is among the subjects dealt with in the seventh annual report of the Children's Bureau of the United States Department of Labor. Even before the entry of the United States into the war American children went to work in increasing numbers to help fill contracts placed with American manufacturers by the belligerent nations. After this country entered the war, "a mistaken sense of patriotism and the many opportunities for employment at an abnormally high wage combined to draw permanently into industry large numbers of boys and girls, many of whom under normal conditions would have continued in school for several years."

The Federal child-labor law which had gone into effect on September 1, 1917, prohibited the employment of children under 16 in mines and quarries and of children under 14 in factories; limited the working day to 8 hours for children under 16 employed in factories and prohibited work for them between 6 p. m. and 7 a. m. But this law was declared unconstitutional by the Supreme Court on June 3, 1918.

The immediate effect of the Supreme Court decision in States where the State child-labor standards were lower than those imposed by the Federal law was the prompt restoration of the longer working day for children under 16 and an increase in the number of working children. In a number of States there was an appreciable increase in the violation of State laws. For example, in one State the inspectors of the Children's Bureau found that 47 out of 53 factories visited after the Federal law had been declared unconstitutional were violating the State law by employing children under 12. Four hundred and thirty such children were employed. In 49 factories visited when the Federal law was in force, only 95 such children under 14 had been found at work. In one State where the minimum age for employment in canneries was 14 years, 721 children under that age, including 50 who were not yet 10 years old, were found at work in the canneries in the summer of 1918.

It was in recognition of the seriousness of this increasing employment of young children that the War Labor Policies Board voted that compliance with the standards of the former Federal child-

labor law should be required of establishments engaged on Government war contracts made after the date of the decision.

In consequence of a number of complaints received by the Children's Bureau regarding illegal employment of children in shipbuilding plants, a special investigation of this industry was made by the Bureau in cooperation with the United States Shipping Board Emergency Fleet Corporation in the winter and early spring of 1919. Practically all the important shipbuilding plants on the Atlantic coast, Gulf of Mexico, and the Great Lakes were inspected, and there were found to be numerous violations of State and Federal laws. Even more serious, however, was the employment of children in hazardous occupations which in prewar times had been confined to older boys and men.

In order to counteract the effects of the war-time employment of children and to discourage such employment in the future, many communities undertook back-to-school and stay-in-school campaigns during 1918 and 1919 under the impetus of Children's Year. Some work to keep children in school and out of industry has been undertaken in the majority of the States. This work has included agitation for better enforcement of school-attendance laws; more attendance officers; more schoolhouses; more and better teachers with higher salaries; a longer school term; better child-labor laws; and provision for advising children in choice of occupation and assisting them in finding suitable employment.

By these and similar means many States hope to reduce the illiteracy which is so alarmingly prevalent, especially in rural districts of the United States and which is so great a stumbling block to Americanization; and to protect children against the hazards of too early employment.

INDUSTRIAL HYGIENE AND MEDICINE.

Composite Industrial Poisons: A Review.¹

BY WM. H. RAND, M. D.

IN A case of occupational poisoning the investigator usually attempts to isolate a single toxic factor that happens to be present as raw material, or as a by-product, waste product, or end product in an industry, and to hold it responsible for the syndrome of diverse and perhaps incongruous symptoms of a subjective or objective character which may develop in the workman.

There is an obvious fallacy in the conclusion to which this mode of procedure leads the observer. It is like a crude piece of detective work which attempts to fasten the guilt of a mysterious crime upon the one man in a community whose ill repute constitutes the sole ground of suspicion against him.

In the particular instance at issue the suspect may be innocent, and able to prove an alibi; or, if culpable, he may have been only an accessory or *particeps criminis*.

Every occupational disease is an industrial problem. Its diagnosis is often obscured and rendered doubtful by apparently incompatible physical signs. Each of these should receive due consideration, for a differential diagnosis can not be determined by giving attention to any salient feature in the case to the exclusion of all else. Ultimately the clinical picture must be visualized as a whole; but the separate symptoms must first be considered one by one.

The etiology of an occupational disease is always important, for a knowledge of the source of danger is prerequisite in order that appropriate measures may be adopted for its elimination. Against poisons used in the trades a man can often protect himself, provided he knows their origin and what their composition is.

For example, take the risk of poisoning in hat manufacture. It is commonly assumed that the peculiar danger in this industry arises from poisoning with the acid nitrate of mercury with which the fur is brushed in the process of carroting.

¹ This article is a review of a series of articles by Dr. Johann Mueller which appeared in the April to August, 1919, issues of the *Zentralblatt für Gewerbehygiene*.

But aberrant symptoms sometimes manifest themselves in carroters which are never present in uncomplicated mercurialism. Since every phenomenon must be accounted for, how are these anomalies to be explained? Not by attributing all unexpected developments and uncoordinated symptoms to the existence of some hypothetical idiosyncrasy of the individual. That is an overworked method of begging the question.

Inquiry at once elicits the fact that the carroting solution is not a simple mixture containing a single poison. Teleky gives the following formula for "die Sekretage:"

Mercury-----	Parts. 4
Sublimate-----	1
Nitric acid-----	32
Arsenic-----	2
Water-----	120

In handling such a compound one is exposed to a number of poisons. Consequently, the physical effects produced by the solution are not uniform but multiform.

It is true that the manifestations of arsenic poisoning in this instance may be masked or obscured by the more obvious effects of the mercury. But the more insidious lesions occasioned by the arsenic, and the systemic disturbances due to nitric acid can not be ignored. The problem is not to be solved by finding the value of x . The statement of the equation involves also the values of y and z .

Whenever possible, of course, it is advisable to isolate and identify the specific toxic agent in any case of industrial poisoning. But when several poisons enter into the composition of a mixture handled by the workman, the determination of the relative degrees of toxicity in the ingredients offers a complex question for analysis. Yet a candid investigator can not disregard any of the conditions.

In the instance already cited, where mercury is one of the elements in a carroting mixture, it is neither legitimate nor logical to impute all of the ill effects of the preparation to mercury poisoning alone. The other components of the solution are not inert, and the concurrent or consecutive pathological signs due to the presence of poisons other than mercury in the compound must be recognized and appraised.

The net results of mixed poisoning are ascribable in part to definite chemical reactions, but partly, also, to antecedent physical conditions which determine the absorption and elimination of toxic substances. Our knowledge of the reactions between the body cells and poisons is still meager, and better acquaintance with the molecular changes produced in the organism by agents of this nature is most desirable. But while much is still uncertain, some points have been made clear.

Buergi (cited by Mueller) has shown that the variable effects of mixed poisons depend on several factors:

1. Mixtures of two substances may yield a new chemical body.
2. The solubility of one substance may be modified by the addition of another.
3. The penetrability of the cell membranes by one substance may be affected by the addition of another.
4. The cell becomes by saturation with one substance more or less absorptive of another.

These statements seem like self-evident propositions, but it is well to have them explicitly formulated, since they have important corollaries. Thus, from the combination of two virulent poisons, for example, copper sulphate and phosphorus, there may arise an innocuous compound. Conversely, a highly poisonous compound may result from mixing two nontoxic substances (iodide of potassium and calomel). It is in this way that industrial poisons often originate.

Now, the toxicity of a substance depends on its potential penetrability into the body, and on its combination in the body with the tissues of vitally important organs in sufficient concentration to cause functional disturbances.

Poisons are absorbed by the system at a variable rate, which depends mainly on the solubility of the substances. Lead and its salts, for example, produce their effects on the nervous and muscular tissues only after the lapse of weeks or months. Lead is very slowly absorbed, but it is still more slowly eliminated; hence its cumulative action.

Rapidity, facility, and degree of poisoning are conditioned also by the quantity absorbed, and by the frequency with which the poison is introduced into the system. A given amount of morphine, for example, administered in fractional doses at brief intervals, produces a more powerful effect than the entire quantity given as one dose.

The principle holds good in reference to many industrial poisons. A short exposure to the hazard of poisoning in an atmosphere heavily charged with lead dust may occasion little trouble or none at all, while long-continued employment in a room where lead-dust diffusion is much less dense may give rise to chronic plumbism of the gravest type.

List of Industries Involving Use of Poisons.

DR. JOHANN Mueller of Taegervilen has published in the *Zentralblatt für Gewerbehygiene* (for April, 1919) a table in which are listed numerous industries and their peculiar processes in which workmen are subjected to the influence of multiple toxic agents (mixed poisons). The table is reproduced in full on account of its intrinsic value and its practical suggestiveness.

LIST OF MIXED POISONS TO WHOSE INFLUENCE WORKMEN ARE SUBJECTED IN VARIOUS INDUSTRIES.

Industry.	Process and product.	Poisons used in manufacture, and chief end products.	Poisonous by-products and impurities.	Remarks.
Sulphuric acid manufacture.	Roasting of pyrites.	Sulphurous acid; lead; sulphuric acid.	Arsenic impurities; arsenic; lead; evolution of arseniureted hydrogen; development of nitrous gases in the lead chamber and tower.	Specially dangerous is cleaning of the lead chamber in case of insufficient ventilation. Nitrous gases. Arsenic compounds. Sulphurous acid. Chronic lead poisoning.
Nitric acid manufacture.	Distillation of niter and sulphuric acid in cast-iron cylinders.	Fuming nitric acid with nitrous acid.	Nitrous gases.....	Acid fumes, especially in case of leaks.
	Production of baryte nitrate by dissolving barium sulphate in nitric acid.	Nitrous acid; tetroxide of nitrogen.	Nitrous gases.....	In the ignitions and explosions much nitrous gas is set free. Used in pyrotechnics and explosive trades.
	Manufacture of lead nitrate by dissolving lead oxide in nitric acid.	Nitrous acid; tetroxide of nitrogen; lead.	Nitrous gases.....	Used in color printing plants, match manufacture, and chrome-yellow pigment.
	Manufacture of the acid nitrate of mercury.	Nitrous acid; tetroxide of nitrogen; mercury.	Nitrous gases.....	Carroting fur, hat manufacture, metal amalgam production, bronzing and silvering.
	Manufacture of silver nitrate.	Nitrous acid; tetroxide of nitrogen; silver.	Nitrous gases.....	Silver.
Soda manufacture.	Manufacture of sodium nitrate by fusing niter with metallic lead.	Nitrous acid; tetroxide of nitrogen; lead.	Nitrous gases.....	Used in photography and in silvering glass pearls.
	Leblanc process...	Sulphuric acid; nitric acid.	Arseniureted hydrogen from impurities of arsenic. From smelting comes much carbon monoxide and carbon dioxide. By the efflorescence of soda residua, sulphureted hydrogen.	The evolution of carbon monoxide is especially dangerous. Acid fumes also injure the organs of respiration and the teeth.
Chlorine manufacture.	Veldén process....	Hydrochloric acid; manganese; chlorine.		Chlorine danger great.
	Deacon process....	Hydrochloric acid; chlorine.	Since the sulphuric acid is taken from the sulphate furnace direct, it holds as impurities arsenic, sulphuric acid, and nitric acid.	Chlorine acne, probably a combined effect of chlorine and tar (chlorinated phenol).
	Electrolytic processes.	Alkaline chlorides; chlorine; mercury.		
Chloride of lime manufacture.	Manufacture of the salt from lime and chlorine.	Lead (chambers); chlorine.		Chlorine poisoning from shoveling the lime; too early entrance into chamber.
Chloride of phosphorus manufacture.	Oxidation of phosphorus and hydrochloric acid. Use of carbon disulphide as solvent.	Hydrochloric acid; chlorine; carbon disulphide.	Carbon monoxide; phosphorus trichloride; phosphorus pentachloride; arseniureted hydrogen.	
Sulphur chloride manufacture.	Heating chlorine and sulphur.	Chlorine; hydrochloric acid.	Hyposulphurous acid.	Decomposition by addition of water with formation of hydrochloric acid fumes.
Phosgene manufacture.	Chlorine and carbon monoxide treated with animal charcoal.	Chlorine; carbon monoxide; phosgene.		Used mainly in dyestuff manufacture. The effect is a combined one—of the entire molecules and decomposition products.

LIST OF MIXED POISONS TO WHOSE INFLUENCE WORKMEN ARE SUBJECTED IN VARIOUS INDUSTRIES—Continued.

Industry.	Process and product.	Poisons used in manufacture, and chief end products.	Poisonous by-products and impurities.	Remarks.
Chloride of zinc manufacture.	Heating of zinc oxide and hydrochloric acid.	Chlorine; hydrochloric acid.	Arseniureted hydrogen.	Used as a mordant.
Methyl chloride manufacture.	Made from methyl alcohol, common salt, and sulphuric acid.	Methyl alcohol; acid fumes; methylchloride.	Arseniureted hydrogen; nitrous gases; impurities of methyl alcohol.	
Chloroform manufacture.	Distillation of alcohol, acetone, and chloride of lime.	Chlorine; acetone; alcohols.	The most important are: Amyl alcohol; ethyl chloride; aldehyde; allylchloride; tetrachloromethane; phosgene; chlorine derivatives of propyl, butyl, amyl acids.	Decomposition of phosgene, ethyl chloride, and other chlorine compounds by free hydrochloric acid in the air. In gas illumination evolve carbon dioxide, carbon monoxide, and hydrochloric acid, with traces of free chlorine, but no phosgene. These products of combustion may cause severe irritation of the mucous membranes.
Carbon tetrachloride manufacture.	Action of chlorine in carbon disulphide with chloride of antimony or aluminium.	Chlorine; carbon disulphide; methylchloride.		
Nitrous chloride manufacture.	Chlorine and sal ammoniac.	Chlorine; ammonia.		Highly explosive.
Cyanochloride manufacture.	Chlorine and cyanide of mercury.	Chlorine; mercury; cyanochloride.	Hydrocyanic acid.	
Dimethyl sulphate.	Sulphuric acid and methyl alcohol.	Alcohol; sulphuric acid; dimethyl sulphate.	Arseniureted hydrogen; nitrous gases.	It acts: (a) As a whole molecule; (b) By splitting up with water it develops sulphuric acid effect.
Explosives: Fulminate of mercury.	Solution of mercury in nitric acid with alcohol.	Mercury; nitrous gases; fulminate of mercury.	Acetic acid; cyanide compounds.	Used in percussion-cap manufacture. In filling the caps there is special danger of chronic mercury poisoning from mercury fumes given off in pressing and filling as a result of small explosions giving rise to nitrous gases.
Nitroglycerin.	Action of mixed nitric and sulphuric acids on glycerin in lead vats.	Sulphuric acid fumes; nitrous gases (from the acid mixture especially, but also by denitrating of waste acids); nitroglycerin; lead.	Arseniureted hydrogen.	Dynamite is produced by mixing nitroglycerin with siliceous earth ("dope"). Mixing and sifting of dynamite cause chronic ulcers at the finger tips and under the nails.
Gun cotton.	Action of a mixture of nitric and sulphuric acid on cellulose.	Acid fumes; nitrous gases; cyanide compounds.	Arseniureted hydrogen.	According to Koelsch, the nitrated benzols are virulent poisons, and, primarily, blood poisons: (Methemoglobin formation, damage to red blood cells.) Perhaps, also, primary injury to the central nervous system.
Smokeless powder.	Gelatinizing of gun cotton with acetone.	Solvents like acetone, alcohol, ether, carbon disulphide, etc.		Toluol nitrites are relatively harmless and cause symptoms of poisoning only after long-continued exposure. Severe poisonings are traceable to impurities.—Koelsch.

LIST OF MIXED POISONS TO WHOSE INFLUENCE WORKMEN ARE SUBJECTED IN
VARIOUS INDUSTRIES—Continued.

Industry.	Process and product.	Poisons used in manufacture, and chief end products.	Poisonous by-products and impurities.	Remarks.
Explosives— Concluded. Smokeless powder— Concluded. (Other ingredi- ents.)	Nitrites.....	Nitrobenzol; nitro- toluol; dinitro- benzol; phenols; picric acid, etc.	Benzol; benzol ni- trites; unnitri- table hydrocar- bons; tetra- nitromethane.	
Shot and bullet manufacture.	For hardening ar- senic and anti- mony are em- ployed.	Lead; arsenic; an- timony.	The proportion of arsenic used is 0.2 to 0.8 per cent; of anti- mony 8 to 14 per cent.	
Iodine and bro- mine manu- facture.	Production of io- dine and bro- mine salts from mother liquors by the action of chlorine and oxidation agents.	Chlorine; iodine; bromine (wood spirit as extrac- tion agent).	Irritating chlorine compounds in small quantities. (Slight action).	
Phosphorus in- dustry.	Production of phos- phorus from phosphorites by means of sul- phuric acid, or by electrolytic process.	Acid fumes; phos- phorus fumes. In the distillation of the phos- phorus, phos- phine is given off, with phos- phorus fumes and carbon monoxide.	Arseniureted hy- drogen. By disintegration of the bleached bones with sul- phuric acid arise sulphureted hy- drogen, carbon dioxide, hydro- cyanic acid, hy- drochloric acid, hydrofluoric acid.	
Swedish matches.	Phosphorus sul- phide produc- tion by melting together red phosphorus and sulphur.	Carbon disulphide in the extrac- tion of phos- phorus.	Sulphureted hy- drogen.	Besides the trouble from gases, acid fumes, etc., the dust is especially dangerous on account of its gross content of caustic lime (in Thomas slag as high as 50 per cent).
Artificial fertil- izers.	Extraction of phosphate of lime by sulphur- ic acid.	Acid fumes; sul- phurous acid; carbon dioxide.	Hydrofluoric acid (since nearly all phosphates con- tain calcium fluoride); ni- trous gases; ar- seniureted hy- drogen.	
India rubber: Vulcanizing.	By the hot pro- cess at about 140° sulphur compounds emerge (chlor- ine, barium, and antimony sulphides). By the cold pro- cess, dipping the gum in a mix- ture of sulphur chloride and carbon disul- phide (or its substitute prod- ucts).	Sulphur chloride; antimony. Carbon disulphide, as a substitute; benzine; turpen- tine oil; carbon tetrachloride; dichlorometh- ane; ether; ace- tone; benzol and its derivatives; anilin.	By disintegrating sulphur chloride in water: sul- phurous acid; sulphureted hy- drogen (from antimony sul- phide).	Nearly all rubber goods are reinforced, often to the extent of 50 per cent of substitutes mostly compounds with vege- table oils and sulphur chlorides, but sometimes containing lead or mer- cury. Hygienic control can under no circumstances be slackened over processes conducted often accord- ing to secret formulae which prescribe strange ingredients for the mak- ing of dyestuffs.

LIST OF MIXED POISONS TO WHOSE INFLUENCE WORKMEN ARE SUBJECTED IN VARIOUS INDUSTRIES—Continued.

Industry.	Process and product.	Poisons used in manufacture, and chief end products.	Poisonous by-products and impurities.	Remarks.
Dyeing.....	Substances principally used are: antimony sulphide; cinnabar; zinc white; frankfort black; white lead and other lead colors (in the making of rubber gloves); also arsenic colors.	Mercury; lead; arsenic.	Sulphureted hydrogen especially by the reduction of the sulphide of antimony with acids.	
Artificial silk manufacture: 1. Nitrocellulose.	Nitriting cellulose. Action of a mixture of nitric and sulphuric acids on cellulose. Dissolving camphor, toluol, etc., in acetic acid. Drying and spinning room processes.	Acid fumes; nitrous gases; cyanide compounds; acetic acid; camphor; toluol alcohol fumes; ethers; undissolved hydrocarbons; ammonium sulphate.	Arsenureted hydrogen; sulphureted hydrogen; ammonia.	
2. Oxide of copper and ammoniac process.	Denitrating..... Precipitation of copper oxide and solution in strong ammoniac menstruum.	Strong alkalis and acids; acid fumes; ammonia.		The alkali and ammoniac manufacturers should do away with this method. Fire risk small.
3. Viscose manufacture (nitrocellulose).	By use of strong alkalis, but mostly with very large quantities of carbon disulphide.	Strong alkalis; ammonia; carbon disulphide.		Like rubber manufacture.
4. Acetylcellulose.	Production of acetylcellulose by addition of ethyl chloride to a solution of nitrocellulose. Use of large quantities of anhydrous acetic acid. Spinning process: Dissolving in ether, alcohol, acetone, etc., and drying. The solvents are poisonous beyond all else.	Nitrocellulose; acid fumes; nitrous gases; cyanide compounds; solvents—acetone; amyl acetate; carbureted hydrogen; benzol and its derivatives or homologues. Ether and alcohol fumes; acetone, etc.		Fire danger very great.
Celluloid industry.		Acetone; aceto-chlorhydrin; ether; benzine; benzol; amyl acetate; anhydrous acetic acid; nitrobenzol; dinitrobenzol; nitrochlorbenzol; epichlorhydrin; methyl alcohol; carbon disulphide; carbon tetrachloride; hexachlor-ethylin, and many other chlorine products. Mixtures: Benzine + amyl acetate; benzine + methyl alcohol; benzine + alcohol; xylol + alcohol; ether + alcohol + acetic acid.	Ignition and detonation, especially when there are drafts of air, evolve fumes of carbon monoxide, carbon dioxide, nitrous gases, hydrocyanic acid, acrolein, and camphor.	Celluloid technique is extremely complicated. Dangers are mostly occasioned by the solvents; but celluloid itself has many peculiarities which make it very unsafe when stored in great heaps: 1. Ready decomposability. 2. Inflammability so that it ignites like a match. 3. Evolution of poisonous gases—(a) by decomposition and detonation; (b) by secondary explosions of detonating gases mixed with air. (Limit of explosibility, a content of 8 to 40 per cent.)

LIST OF MIXED POISONS TO WHOSE INFLUENCE WORKMEN ARE SUBJECTED IN VARIOUS INDUSTRIES—Continued.

Industry.	Process and product.	Poisons used in manufacture, and chief end products.	Poisonous by-products and impurities.	Remarks.
Celluloid manufacture.	Made of camphor, alcohol, and pyroxalin. Pyroxalin is obtained from vegetable fibers by treatment with sulphuric acid and nitric acid.	Alcohol; camphor; acid fumes; nitrous gases.		
Gas industry: Coke ovens.	Dry distillation, purification processes.	Illuminating gas: carbon monoxide, carbon dioxide, ammonia, methane, tar; ammoniac water gas: sulphureted hydrogen, carbon disulphide, hydrocyanic acid; rhodan compounds (phosphorus, arsenic, etc.).		According to Jehle and Layet, the hygienic condition of the gas-plant workman is by no means satisfactory. Especially in the condensing and purification rooms, the air is always charged with gas. Danger of poisoning is notably great in case of leaks and industrial accidents (bursting of pipes, etc.).
Process of gas purification.	Extraction of ammonium salts by washing with water. Extraction of sulphur with carbon disulphide. Production of the ferrocyanide of potassium.	Cyanogen; ammonia; cyanide compounds; rhodan compounds. Carbon disulphide; ethyl trichloride.		
Ammoniac production.	Disintegration of the nonvolatile ammonium compounds with caustic alkali. Distillation.	Ammonia; sulphuric acid; metaphosphoric acid. Penetration of ammonia fume into the acids gives rise to ill-smelling gases. Sulphureted hydrogen; cyanogen. Lead poisoning from lead.	Pyridin, pyvrol, phenols, tar.	
Calcium carbide manufacture.	Reduction by smelting or electrochemical process, producing acetylene by addition of water.	Acetylene; carbon dioxide; carbon monoxide.	Ammonia; sulphureted hydrogen; especially phosphine (to the amount of 0.2 per cent).	
Tar industry...	Dry distillation of anthracite coal. Fractional distillation.	Tar fumes consisting of: 1. Hydrocarbons of the methane series, paraffin, olefin. Hydrocarbons of the aromatic series, benzol and its homologues, naphthalin, anthracene, phenanthrin, etc. 2. Phenols, (cresolin, naphthalin). 3. Sulphides (sulphureted hydrogen, carbon disulphide, mercaptan, thiophen).	Poisonous end-products: Pyridin, benzol, toluol, zylol, naphthalin, phenols, salicylic acid, picric acid, cresols, naphthols, anthracene.	Production of dense fumes of tar, especially in extraction plants, wood-preserving establishments, roofing-paper factories, and, above all, from open kettles. Severe skin diseases occur (tar itch).

LIST OF MIXED POISONS TO WHOSE INFLUENCE WORKMEN ARE SUBJECTED IN VARIOUS INDUSTRIES—Continued.

Industry.	Process and product.	Poisons used in manufacture, and chief end products.	Poisonous by-products and impurities.	Remarks.
Tar industry— Concluded.		4. Nitrogen compounds (ammonia, methylamin, anilin, etc., pyridin, etc.).		
Dye manufacture.	1. Nitrites with nitric acid and sulphuric acid. 2. Reduction to amines. 3. Sulphurization with concentrated sulphuric acid. 4. Conversion of sulphur acids into phenols by fusion with caustic soda. 5. Chlorinating, brominating, combining with phosgene. 6. Methylating.	(a) Poisonous products: Methyl alcohol, ethyl alcohol, phosgene, formaldehyde, hydrocarbons of the aromatic series (benzol, toluol, xylol, naphthalin, anthracene, phenols, cresols), oxalic acid, tar, acetaldehyde, anilin, toluidin, nitrobenzol, picric acid, phenylglycoccol, nitrosodimethylanilin, monodinitrobenzol. (b) Toxic reagents: chlorine, nitric acid, sulphuric acid, sulphureted hydrogen, ammonia, methylbromide, methyl iodide, arsenic, antimony, lead, chromium dimethyl sulphate. (c) Poisonous end-products: Nitrous products (nitrobenzol, toluol, picric acid), aromatic bases (toluidin, anilin, xylidin, dimethylanilin), sulphur acids, phenols and cresols, paraphenylenediamin, suspected dyestuffs (as a rule, of course, dangerous only in large quantities), saffron yellow, anilin orange, picric acid, dinitronaphthol, nitrous dyestuffs, aurantia-hexanitrodiphenylamin, kaiser yellow, ethyl and methyl violet maldola dyes, corbulin, fast blue, etc.	Incidental products: Nitro and amino compounds of many varieties (nitrobenzol, acridin, cyanogen, diamin. By-products and impurities: Ammonia, sulphureted hydrogen (from sulphur dyes), nitrous gases, acid fumes, cyanogen compounds, arseniureted hydrogen stibine.	The most frequent poisonings are due to anilinbenzol and its homologues, nitrobenzol, nitrous gases, arsenic. The shops are generally well equipped from a sanitary point of view. But poisonings continually occur as results of improvidence or accident. A special danger is that arsenic acts partly as an acid impurity in arseniureted hydrogen, partly also because it is used in substance for bright colors. (Every factory boasts of special patents and special processes.)
Metal industry: Lead.....	Roasting ore. Reduction of the oxides by coal, Patterson crystallization process. Lead refining.	Lead danger.....	Sulphur dioxide; arsenic; antimony; smoke of smelteries.	

LIST OF MIXED POISONS TO WHOSE INFLUENCE WORKMEN ARE SUBJECTED IN VARIOUS INDUSTRIES—Continued.

Industry.	Process and product.	Poisons used in manufacture, and chief end products.	Poisonous by-products and impurities.	Remarks.
Metal industry—Con.	Whitelead manufacture by the action of acetic acid fumes and carbon dioxide (coke burning) on lead plates in closed chambers.	Carbon dioxide; acetic acid; lead.	-----	Especially hazardous is the work in the oxidizing chamber. Smeltery smoke: A product of imperfect combustion. It contains carbon monoxide, sulphur dioxide, dust of toxic metals (lead, zinc, mercury, arsenic, antimony). Smelting disease. Pallor of countenance. Lowering of physical resistance. Finally, specific poisonous effects. The smeltery smoke is always heavily charged with arsenic. There is absorption of small quantities of arsenic or arsenious oxide.
Mercury....	Extraction from cinnabar in blast furnaces. Condensation and distillation.	Mercury.....	Sulphur dioxide; smeltery smoke.	Like risks exist in the smelting of cobalt, nickel, lead, copper, iron, silver, and zinc.
Arsenic and antimony	Roasting of arsenic-bearing ores.	Arsenic; antimony	Smeltery smoke, arseniureted hydrogen, stibine.	
Iron.....	-----	-----	Furnace gases constitute the chief danger. These consist of arseniureted hydrogen, stibine, carbon monoxide, sulphur dioxide, hydrocyanic acid.	
Ferrosilicon	-----	From this come some mineral acid products, sulphureted hydrogen, for example.	Phosphine, arseniureted hydrogen, sulphureted hydrogen (with moisture), especially under 70 per cent in amount; carbon dioxide; carbon monoxide; sulphureted hydrogen; sulphur dioxide; and arseniureted hydrogen.	Ferrosilicon virtually always contains phosphorus, arsenic, and sulphur, so that the development of very poisonous compounds is to be expected. (Poisonings occur on ocean vessels when as a result of the entrance of water such gases evolve.)
Lime burning..	In blast furnaces which are filled with a mixture of limestone and coke.	-----	-----	-----
Dyeing.....	Mordanting the fiber and dyeing it, often in leaden vats.	Mordants: Chromium compounds, especially potassium dichromate, acetic acid, sulphuric acid, zinc chloride, potassium chlorate. Solvents: Methyl-ethyl-amyl alcohol, turpentine, benzine, benzol-acetone. Dyes: Lead and arsenic colors, anilin colors, nitrite of lead colors, lead chromates. Bleaches: chlorine, sulphurous acid, chloride of lime, phenol, fluorine.	Acid fumes, especially hydrochloric acid, chlorine, ammonia, acetic acid, cyanogen, rhodan compounds.	Schuler reports that severe epidermal inflammations result from using anilin black.
Tanning.....	Depilation and curing of skins.	Sulphide of soda, lime gas, arsenite of potas-	Carbon dioxide; cyanogen compounds; sul-	Great danger from pollution of the waste water.

LIST OF MIXED POISONS TO WHOSE INFLUENCE WORKMEN ARE SUBJECTED IN VARIOUS INDUSTRIES—Continued.

Industry.	Process and product.	Poisons used in manufacture, and chief end products.	Poisonous by-products and impurities.	Remarks.
Tanning—Con.	Arsenic for denuding of wool, cyanogen for depilation. Ash process.	sium, formaldehyde, oxalic acid, cyanogen. Lime water, arsenite of sulphur.	phureted hydrogen; sulphur compounds. Putrid substances like sulphureted hydrogen, methane, carbon dioxide, sulphur compounds, cyanogen.	
	Mordant of tan and its substitutes (quebracho, clay mordants, decoction of wheat, bran, and water, etc. Chrome tanning. Dyeing with anilin colors, lead colors, etc.	Chromium..... Anilin, anilin colors, potassium ferrocyanide, lead, arsenic, sulphuric acid, mercury colors, color solvents.	Sulphur dioxide.	
	Used especially for bright colors: Lead acetate and sulphuric acid solutions.			
	Carroting.....	Mercury; nitric acid; nitrous gases; arsenic.		
Furrier industry.	Fur dyeing.....	White lead, lead sulphate, phenylendiamin.		Especially hazardous as a house industry.
Accumulator (electric) factories.		Litharge, minium, sulphuric acid, mercury.	Acid fumes, arseniureted hydrogen.	There is a whole series of ill-defined ailments produced by the action of irritating acetone fumes, and which, according to Lewin, cause asthma and bronchitis, and, according to Cossmann, result in a condition resembling diabetic coma, and complicated at the same time by lead poisoning. There are other combinations of lead and acid action.
	Celluloid solutions.	Usually acetone and amyl acetate (but other solvents also).		
Incandescent lamp factories.	Use of air pumps. Incineration of incandescent bodies.	Mercury; fumes of nitric acid, colloidion, and ether.	Nitrous gases.	
	Phosphorus pentachloride drying.	Amyl acetate; smelter gases. Mixtures: Acetylene, illuminating gas, nitrous gas, etc.		
Galvanotechnic.	Galvanic reduction of gold, silver, copper, nickel, zinc, etc.	Hydrocyanic acid, dicyanogen, ferrocyanide of potassium, mercury (from the electrodes).	Lead, arsenic, and antimony from impure metals.	Workmen may be as much endangered by maceration fluids as by the escaping fumes, though acute poisoning by prussic acid is rare. Chronic effects are more frequent (owing especially to the inadequacy of precautionary regulations). Chronic eczema is common as a result of contact with the solvents.
	Breweries.....	Arsenious acids, hydrochloric acid, antimony.		
Tinning, etc., by hand.	Cleaning and corroding of metals.	Sulphuric acid, hydrochloric acid. Metals, such as lead, arsenic, etc.; sal ammoniac.	Arseniureted hydrogen, ammonia.	
	Tinning.....	Acid fumes, metal fumes.	Arseniureted hydrogen, ammonia.	
	Brass refining.....	Nitrous gases, chlorine oxides.		Widely practiced in every small metal works.

LIST OF MIXED POISONS TO WHOSE INFLUENCE WORKMEN ARE SUBJECTED IN VARIOUS INDUSTRIES—Concluded.

Industry.	Process and product.	Poisons used in manufacture, and chief end products.	Poisonous by-products and impurities.	Remarks.
Solder manufacture.	Hard solder is made of brass and zinc. Soft solder is applied to the joint as a saturated solution of tin and lead in hydrochloric acid. (Gases Acetylene, illuminating gas, oxygen admixtures.)	Zinc fumes, zinc oxides, lead, hydrochloric acid.	In this category belong gases and fumes of the arseniureted hydrogen combustion material, hence mostly carbon monoxide.	Morbidity directly due to occupational poisonings (aside from plumbism) is not, indeed, great. Roth shows, however, that phthisis plays a leading role among tinsmiths. For this result the gases and fumes rising from the solder are surely responsible, provoking irritation of the respiratory organs (and by their continual action greatly lowering the resistance of the system).
Glue, putty, cement, etc., manufacture.	Extraction of fats..	Benzine, benzol, acetone, carbon disulphide, sulphur chloride, sulphur dioxide, turpentine, carbon tetrachloride, etc. Acid fumes.....	Acrolein, sulphureted hydrogen.	It is worthy of notice that there are many secondary or collateral trades which are subject to special risks of the same sort.
	Recovery of the residua from the glue kettles with sulphuric acid.	Lead colors; catalytic agents.	Ammonia, nitrogen fermentation products, Mercaptan. Arseniureted hydrogen.	
	Compositions.....		Combustion gases, like carbon monoxide.	In putty factories there are mixed poisonings from lead, mercury, and carbon disulphide.
	Putty made of litharge, red lead, and linseed oil.	Lead, mercury, carbon disulphide, turpentine, benzine, benzol tar products.		
	Resinous cement made of wax, turpentine, etc. Solution of india-rubber and shellac in coal tar oil.			
Porcelain manufacture.	Ultramarine production is a result of fusing a mixture of kaolin, sulphates and charcoal.		Sulphuric acid, sulphur dioxide, carbon monoxide, carbon dioxide.	Mixtures of carbon disulphide holding materials are used as cleansing agents or grease detergents in combination with lead, less often with mercury compounds in cement, and in plastic masses for insulation.
	Dyeing and painting.	Lead; arsenic; silver nitrate; nitric acid; chromium compounds (hydrochloric acid, hydrofluoric acid; sulphuric acid).		
Enamelled ware manufacture.	As raw materials are used felspar, fluorspar, clay, niter, soda, borax, lead oxide, tin oxide.	Lead; tin oxide; sulphur dioxide; antimony.	Nitrous gases, acid fumes, carbon dioxide, carbon monoxide.	Glazes react powerfully in combination. Dry-handed. Dust, etc. Furnace gases, etc.
	Colors.....	Chromium, manganese, lead, arsenic.		
Photography...		Bromine, chlorine, iodine, chromium, mercury, silver nitrate, cyanogen, ferrocyanide of potassium, anilin, nitrobenzol, reducing agents (blood poisons).		

A cursory survey of Mueller's tabulation is likely to leave on the reader an unfavorable impression as to its value. The author avoids a discussion of such matters as the diagnosis, symptoms, and treatment of occupational poisonings, and waives all reference to other related subjects of equal importance. His grouping of the industries seems arbitrary and anomalous, and the toxic substances said to be used or generated in the processes of manufacture are so diverse in their nature and effects that the entire presentation appears like a capricious collection of ill-assorted and incoordinate data.

But on closer analysis and from a different angle, what seemed a caricature becomes a clear picture. Let us take the author's point of view. He did not propose to make an elaborate and exhaustive classification of industrial poisons. He merely undertook to study intensively a single phase of the subject and to report his observations.

Now the lesions produced by exposure to conglomerate poisons are hybrid and heterogeneous; and it is the distinguishing merit of Mueller's work that it is the first to take cognizance of the complex and erratic forms of what may be termed amalgam poisonings in the trades.

The dominant features in the author's classification are found in columns 3 and 4 of the table, and relate to the poisons used in manufacture, and poisonous by-products and impurities. Everything else is subordinate. The industry and the process are relatively unimportant. It is the mixed character of the poisoning that Mueller aims to illustrate, and that alone. He is a pioneer in this field of exploration; though analogous examples of multiple infection are common in other departments of medicine. In influenza, for instance, it has been proved that Pfeiffer's bacillus is not the sole infective agency, but that pneumonococci, staphylococci, and streptococci are often present in a given case, causing grave and discrepant complications.

The appearance at this juncture of the foregoing elaborate table of mixed poisons used in the industries may be regarded as significant. It will be recalled that a time limit of 10 years was suggested by the International Association for Labor Legislation in 1911 as the maximum interval before the "List of industrial poisons" adopted and promulgated in that year should be subject to revision and brought up to date. This period has nearly expired, and it is evident that preparations are under way to insure incorporation in the revised list of additional matter of special importance.

Though this work of Mueller in its present form contains no intimation that it is intended to serve as a basis for preliminary discussion or subsequent action at some future session of the association, many of its innovations deserve, and will undoubtedly obtain, recognition in the prospective revision.

Value of Mueller's Records.

MUELLER resumes the consideration of composite industrial poisonings in the May number of *Zentralblatt für Gwerbe-hygiene*, analyzing and correlating the data tabulated in his paper published in the April issue of that periodical. He amplifies the discussion still further in a series of articles in the same magazine for the months of June, July, and August.

These consecutive records constitute an authentic and valuable contribution to the knowledge of a subject concerning which there is yet much to learn.

Mueller regards as an imminent danger the practice, now so common in many industries, of manufacturing substitute products to replace staple commodities. What was called an adulterated article before the war at present goes under the euphonious name of a "substitute product"; and the middleman, the author says, has no interest in exposing the fraud. When methods and processes of production are fraught with danger it is customary to conceal the fact, and Mueller's experience indicates that fraudulent dealers seek to avoid an expert investigation.

In one instance cited he saw the oily waste products of a chemical factory made into shoe polish, washing powder, etc., disguised sometimes with perfumes so as to fit the product for trade competition. The manufacturer troubled himself very little when the excessive proportion of nitrobenzol added to the mixture caused hemoglobi-nuria and severe poisoning, "such as we have repeatedly seen from the use of shoe polish and floor wax." (In a footnote the author adds that during the war not less than 3,000 washing powders, dangerous to health and injurious to the laundry linen were manufactured in Germany.)

Such reckless contempt for the consequences of their action on the part of unscrupulous manufacturers is likely to ruin the conscientious producer who has some regard for the law and the general welfare. The author holds that it is the plain duty of the Government to pluck up by the roots these fraudulent enterprises which vegetate in the dark, in order to protect the honest producer on the one hand and the unsophisticated user on the other. The latter can not know his danger, since, so far as possible, it is kept out of sight.

The coal used in the manufacture of acetylene often contains much sulphur and phosphorus. Although acetylene gas is poisonous only when highly concentrated, reports and observations attest the frequent occurrence of poisonings by this agent. The impure products which are evolved in the processes of manufacture form poisonous compounds that prove injurious, especially the hydrocarbons.

Acetylene made from poor coal contains as much as 0.1 per cent phosphine and sometimes arseniured hydrogen, sulphureted hydrogen, and telluric compounds like ferrosilicium, the dangers of which have only recently become known.

We saw one man whose duty was to clean a great many acetylene lamps. For a long time he felt ill when engaged in this work, especially when these lamps were not lighted but gave off acetylene gas. He suffered from headache, nausea and malaise, choking sensations, tenderness in the region of the liver, etc.

Another form of acetylene poisoning results from imperfect combustion of the gas. This affords an example of the manner in which a host of industrial poisons may crop out in a single trade. The example is all the more interesting because in an industrial process now extensively employed in every large metal works the acetylene jet is utilized for welding. In this operation oxygen and acetylene must be kept mixed in definite proportions. The optimum for perfect combustion consists of an acetylene content of about 7.3 per cent. If acetylene enters into the combination in higher proportions, combustion is imperfect; and, as a result, there are evolved hydrogen, water, carbon dioxide, and above all carbon monoxide. From prolonged imperfect combustion of acetylene comes phosphine which with an attenuation of 1:100,000 kills rabbits in one hour; so it appears that even when slight concentrations occur, they are liable to injure the health.¹

With the diffusion of unconsumed acetylene we may have sulphureted hydrogen and arseniured hydrogen, so that in acetylene welding it is possible that six poisons may be produced:

1. Acetylene (which forms an unstable combination with the hemoglobin of the blood).
2. Carbon dioxide.
3. Carbon monoxide (product of imperfect combustion).
4. Sulphureted hydrogen (from the sulphur content of the coal which is converted into sulphureted hydrogen by the carbide process and finally oxidized into sulphur dioxide).
5. Phosphine (from the phosphorus content of the coal).
6. Arseniured hydrogen (also resulting from the production of hydrogen).

A workman often solders with an acetylene blast under a large, open brewery vat. The space overhead is closed in, so that hot gases remain in the cupola. Sometimes while at work the apparatus is extinguished because the nozzle of the oxygen blast pipe becomes stopped up. Hence arise—

1. Products of imperfect combustion in consequence of the great variation in pressure of the blast jet.

¹ In the Journal of the American Medical Association for Sept. 6, 1919, p. 801, the death by acetylene gas poisoning is reported of "a man of 34 who had been welding for half an hour inside a large boiler."

2. The constituents of acetylene. After a variable period the workman becomes ill and is obliged to go into the open air; he suffers from nausea and has an irritating cough. Icteric symptoms follow. Recovery is slow.¹

This process is used also by tinsmiths, and the resulting ailments are often regarded as the effects of acetylene poisoning; but they are in reality manifestations of mixed poisoning due to impurity of the products and to carbon monoxide.

Diagnosis of Poisoning and Clinical Histories.

THE diagnosis of poisoning is often difficult. Poison acts upon the body like any other injurious agent, causing functional disturbance; and the human body reacts in the same way whether this disturbance is due to a foreign substance invading it from without or whether the noxious material is generated within the organism itself. "There are no symptoms of exogenous poisoning which may not with equal propriety be traced to another cause."

Current popular opinion assumes that an exact chemical reaction is necessary to demonstrate the presence of poisonous ingredients in a mixture and establish a differential diagnosis of poisoning. But it is possible to satisfy this requirement in only a few instances, mostly those of acute poisoning. In chronic cases, as encountered in the industries, the proof of poisoning by a single toxic substance is often very difficult, and the diagnosis becomes impracticable by this method when several poisonous substances act in combination.

In a certain number of cases it is feasible, of course, directly to identify the poison (lead, mercury, etc.) though generally the clinical diagnosis must rest on secondary symptoms. It is deserving of attention that, at the time the symptoms of poisoning appear in chronic cases, many poisons can no longer be isolated as such by chemical means, and under special conditions are not demonstrable at all. Not only are the readily decomposed substances (such as sulphureted hydrogen, carbon disulphide, nitrous bodies, cyanogen, and carbon monoxide) often changed or eliminated, but even lead may have left the body when symptoms of plumbism first develop. Under these circumstances a positive certainty is attainable only when one can analyze the clinical picture by the aid of all accessory means, and especially by an examination of the blood and of the nervous system.

"In industrial poisonings," says Mueller, "we do not meet with the clinical pictures which correspond to the typical lecture-room examples, and by the combination of different poisons there naturally arise the most divergent variations of effect, according to the quantity and the time of absorption. Experiments as to the effects

¹ *Zentralblatt für Gewerbehygiene*, June, 1919, p. 99.

of mixed medicaments are not yet so far advanced as to enable one to deduce any general law; but they most impressively show that through new combinations specific reactions may be produced, that the action of some components may be intensified, as the effect of each is sometimes reduced, sometimes potentized, according to the mutations in the nature of the mixture."¹

The author relates some illustrative clinical histories:²

I. A workman suffered an attack of enteritis without apparent cause. He felt as if he were intoxicated, especially in the evening, and complained of headache, profuse perspiration, and loss of appetite. In addition he had periodical lancinating pains in the pectoral muscles and in the thighs, without paralysis or aggravation on pressure. Patellar reflexes were lowered. With fingers outspread, a rapid, fine, lateral tremor occurs. There is slight albuminuria. On questioning him, salivation is found to exist. The whole clinical picture, with entire absence of fever, suggests a diagnosis of probable poisoning.

The peculiar lancinating pains in the pectoralis muscles lead to the conjecture that this is a case of carbon disulphide poisoning. It is well known that in carbon disulphide poisoning polyneuritis is often present, particularly in the muscles of the leg and chest, without degeneration or paralysis. These neuritic symptoms are almost always accompanied, in chronic poisonings, by a condition simulating inebriation which increases toward evening, with general irritability, loss of appetite, and intestinal disturbances, but with entire absence of sensory disorders. We commonly find, however, in mere carbon disulphide poisoning a tremor of the outspread fingers quite unlike this, while the very rapid, exceedingly fine lateral trembling, with exaggerated intensity at the beginning of a voluntary movement, is almost pathognomonic of mercury poisoning. (Pieraccini, Zangger.) In our case the patient's salivation and traces of mercury in the urine furnished infallible clues. Inquiry as to the labor conditions in this case elicited the fact that the workman had to handle a mixture of carbon disulphide, lead, and mercury compounds which smeared his arms for hours before it could be washed off. So absorption of mixed poisons (carbon disulphide and mercury) was demonstrated. Whether lead did not also play a part could not be determined. At most its presence could not be directly proved, and some of its typical effects (on the blood, mouth, and nervous system) were completely eclipsed by the symptoms of mercury poisoning.

In this case the nervous symptoms alone led to the immediate diagnosis of poisoning by two agents, one of which could be positively identified in the urine.

II. A workman employed as a brass and tin smith, complained of gastric disturbances, vertigo, nausea, headache, and debility, becoming greatly emaciated. Several physicians made a diagnosis of digestive trouble and treated him for gastritis. But as no improvement occurred and no other cause of illness was apparent, some one finally suspected poisoning, "probably by tin." A thorough examination of the man revealed a typical lead line, and hematologically there was marked anemia with basophile erythrocytes. Lead was found in the urine, and the man was certainly suffering from plumbism. But besides this, the man had light brown spots on the fingers, and his mustache and beard were discolored with a yellowish brown pigment. These signs led to the presumption of exposure to nitric acid and nitrous fumes. In workmen exposed to such fumes it is usual to find this faint discoloration of the beard combined with intense anemia, pallor, and chronic bronchial catarrh. Analysis of the situation showed

¹ Zentralblatt für Gewerbehygiene, June, 1919, p. 104.

² Idem, pp. 104, 105.

that the man came into contact not only with the two poisons indicated by the symptoms, but with six or seven more. It is noteworthy that all these other poisons left no specific symptoms by which they could be identified. They were in fact obscured and submerged by the predominant symptoms of indigestion and grave anemia.

III. A workman had to pour a large quantity of anilin oil into a receptacle and mix hydrochloric acid with it. Hence arose a dense cloud of anilin hydrochloride. He used diazo compounds also with materials which may be injurious to health, among them the nitrites. After a while the man became ill with violent headache and vertigo, followed by dyspnea and persistent coryza with sore throat, nausea, and obstinate enteritis. At intervals he had attacks of profuse perspiration. Finally a fine eruption broke out over his entire body; he noticed that there was always much water in his mouth, and that his teeth became rough and crumbled away in small spicules.

On examination about three months after the beginning of his illness, the man had a sallow complexion, pale mucous membranes, but no disturbances of vision, though when nauseated his sight grew dim. No organic cause of the nausea and gastric symptoms could be ascertained. All reflexes were present, varying somewhat, but within the normal limits. Blood condition: Leukopenia, eosinophilia.

That the workman had been exposed to acid fumes was highly probable, for he exhibited the well-nigh pathognomonic sign of friability of the front teeth. (Kulmert and Boppert.) Such splintering deformities of the teeth are demonstrable for a long time. If one has inhaled hydrochloric acid fumes, he has certainly absorbed some anilin also. The blood condition shows a picture such as one finds after the action of benzol derivatives and their poisonous homologues like anilin (polychromasia and diminution of leucocytes), so that the eosinophilia is probably to be interpreted as a sign of a general condition of irritability. Concerning the effect of nitrites in this case nothing can be positively affirmed. But Heingeling declares that the nitrite worker often suffers the loss of his front teeth.

The cephalic congestion and the occurrence of perspiration are to be regarded as incidental effects of nitrites upon the nerves. Possibly, too, the eruption is traceable to the same source, for typical cases of nitrite poisoning are known in which, along with the general symptoms, roseola-like eruptions have been observed. (Harnack.) It is interesting to learn that this man was for a long time considered under a mistaken diagnosis as syphilitic, on account of this eruption. No other diseases are nowadays so frequently—indeed so uniformly—misunderstood in a high percentage of instances as the mixed poisonings.

Difficulties of Diagnosis.

MUELLER has observed a series of mixed poisonings in which the diagnosis of two or several poisons could be determined by the symptoms; but in many other cases it could be arrived at only by exclusion, and under the most painstaking scrutiny of the situation (grouping of cases, recurrence under like conditions, acute illness without fever).

The following points indicate the difficulties of diagnosis:

1. The human body is limited in its reactions.
2. The clinical pictures are often masked by acute illnesses of a different etiology.

3. Individual differences: Pernicious influences act upon a body that has definite and altogether individual antecedents.

It is well known that a cell or an organ reacts to external stimulus by irritation or paralysis, and that the form of reaction depends on the intensity of the stimulation. So an irritant action superadded to a paralyzing injury will not lessen the paralysis but increase it. If, now, another injury occurs which in and of itself is merely irritating, the total effect will be intensified paralysis. In this way the cumulative effect of several slight irritations is paralyzing, since the system reacts to a succession of minor injuries as if they were a single severe injury.

This is true in general, and in particular, also, of mixed poisonings. For example, vomiting is a symptom of ambiguous import. If we would enumerate all its causes, we must begin with the poisons which directly affect the vomiting center in the oblongata; then cause to pass in review all impressions made on the organism acting indirectly by way of the reflexes; and finally include the anatomico-pathologic changes which act as secondary stimuli to that center.

By analogy there exist many other general symptoms like anemia, debility, emaciation, etc., and especially the heightened nerve reflexes, causing instability and irritability, which so often sail under the common flag of nervousness, hysteria, etc. These are mere signs that the body is reacting to injurious influences that have no specific character. Chemical effects especially belong wholly in the category of ordinary diseases. Curschmann says:

Poisonings are general diseases occasioned by specific causes. A great variety of symptoms may be produced by absorption of poison, as well as by other etiological agents. Even the symptoms of specific poisoning are so completely hidden in the mass of diverse toxic effects that they are scarcely perceptible; hence, in many cases, one must be satisfied if he can clinically establish a general diagnosis of probable poisoning.

It is not to be wondered at that the organism under the influence of a mixture of poisonous gases responds simply by collapse or suffocation on the one hand, or by inebriation and confusion of ideas on the other. In either case, the several component poisons may, of course, play an important rôle, but their specific effect is merged in the general effect. The typical is lost. (Compare the poisonings by modern war gases.) Naturally, we find similar conditions in chronic poisonings which, according to Lewin, are nothing else than the cumulative total of single, small, acute effects.

A misleading clue, conducting to an erroneous or incomplete diagnosis, is the fact that mixed poisons seem to have a selective though somewhat erratic action on different organs, producing a diversity of symptoms. As a result of exposure one man may suffer solely from indigestion and nausea, others subject to the same conditions have bronchial catarrh.

In Switzerland the law discriminates between the effects of poisoning and the effects of infection.¹

Other circumstances may cloud the issue. Fatigue, infections, diabetes, and arteriosclerosis may combine and shed on the clinical picture refracted lights which distort the vision and render the diagnosis problematical. Or alcoholism may complicate the situation. Every physician divides his patients into two classes, the alcoholics and the nonalcoholics; for experience teaches how much the treatment and prognosis, as well as the effects of medicine, are determined by chronic alcohol poisoning.

Importance of Alcohol in Industrial Poisoning.

ACCORDING to Mueller, the importance of alcohol in industrial poisoning may be regarded from three points of view:

1. The purely physico-chemical action: On individual cells the alcohol acts as a solvent of fats on the one hand, and, on the other, through pronounced changes in surface tension of watery solutions, it at the same time facilitates the penetration and action of other extraneous substances which are present.

2. Functional disturbances: By its paralyzing influence on all vital reactions it reduces the normal resistance of the system.

3. Anatomical changes as a result of irreversible processes: (Circulatory and nervous system, the liver, the kidneys, the internal secretions, etc.)²

It is because of the well-known injurious effects of alcoholic beverages that in many industries, especially where lead, arsenic, anilin, and mercury are employed, the consumption of alcohol is expressly forbidden.

Friedländer and Moor characterize alcohol as "the deadly enemy" of anilin workers, and Pieraccini makes a similar observation concerning its pernicious influence upon the health of those who handle mercury.

Alcohol is never used in food products unless in mixtures with other ingredients. But aromatic essences are dissolved in alcohol that is often adulterated with fusel oil and amyl or methyl alcohol. The French absinth and all essence-flavored beverages of like character are much more toxic than alcohol itself.

To the alcohol addict traumatism is peculiarly dangerous. In England many cases of pneumonia are known to be occasioned by trivial injuries of any kind. The main cause of such attacks is attributable to the methyl alcohol used in schnapps.

In some factories female employees are said to induce a condition of intoxication by inhaling the vapor of ether, benzine, and benzol,

¹ Art. 19 des Schweiz. Unfallversicherungsgesetzes.

² Zentralblatt für Gewerbehygiene, July, 1919, p. 114.

or by rubbing carbon disulphide into the skin, or by eating sweet nitrous substances, by which practices severe chronic poisonings are produced.

In the *Zentralblatt* for July Mueller recites in detail the histories of many mixed poisoning cases which are deserving of analytical study by all physicians whose duties require them to treat obscure or ill-defined occupational diseases. The effects of carbon monoxide, arsenic, lead, phosphoreted hydrogen, acetylene, benzine, mercury, sulphureted hydrogen, etc., singly and in various combinations, are fully discussed in these clinical records, together with the complex syndrome of symptoms.

The increasing use of substitute raw materials and the adoption of new manufacturing processes in the industries are innovations which demand and deserve impartial consideration. It is no longer possible to assume that an industry which was formerly "safe" will remain so; and it is a fatal mistake for the physician to ignore the possibility of poisoning because a certain manufacturer, for example, in 1912 made use of none of the materials designated as dangerous to health in Sommerfeld and Fischer's "List of Industrial Poisons." Owing to the introduction of substitute products and the change of processes necessitated by the lack of the usual raw materials, new situations are constantly arising and new dangers are incurred.

Mueller emphasizes the fact that there has been a notable increase in the number of mixed poisonings coincidently with the development of modern technical processes. He assigns as the chief reasons for this increase:

1. The extensive use in various industries of materials which endanger the health by their chronic effects.

2. Impurities: The processes are seldom executed with chemically pure materials. (In fact, there is now no possibility of choice.)

3. Supervision and execution of many wholly diverse and variable industrial processes by the same workman. Complete ignorance of the dangers inherent in the materials used on the part of both workman and proprietor.

The dangers increase in the small shops and temporary factories especially, where even the most primitive means of protection are wanting. These places are not subject to factory inspection laws, and live in isolation by deceit and fraud.

4. Frequent change of methods and processes:

- (a) By the compulsion of competition.

- (b) Since the war in particular, through modification of the finished products, so that a characterization of the industry according to its specific chemical hazard is no longer feasible. Industries which yesterday were free from risk may be very dangerous to-day, though the changes in the processes are not generally known outside of the business. They are kept secret in order to avoid competition.¹

¹ *Lentralblatt für Gewerbehygiene*, August, 1919, p. 142

Difficulties in the recognition of mixed poisonings are occasioned by—

1. The atypical clinical picture. Experiment with mixed poisons has shown that wholly new, peculiar reactions may result from combinations of poisons acting together. Especially is it true that the effects of single substances are seldom proportionately evident; on the contrary, potentized action is to be expected. By the formation of new chemical substances changes take place in the chemical and physical conditions that can not be anticipated on account of the extraordinarily complex proportions in which the toxic effect enters the system.

2. Limited possibilities of reaction of the human organism. There are great individual differences. Complication with diseases of a nontoxic character (principally infectious) which may modify and mask the poisoning symptoms.

3. The difficulty of investigating the environment. The demands upon the physician's knowledge of chemical and technical relations are often very great and require special concentration of attention. On account of the rapid evolution of modern technique, it is very hard to secure a comprehensive view of the dangers in the several industries. Trade secrets and opposition of the management very often prevent a thorough analysis of the situation.

4. Complete disorientation of the workman, and very frequently of the business manager, also, by means of which the investigating expert is put on a false scent.

In view of the importance of a correct knowledge of mixed poisons the following measures are recommended:

1. Extension of prophylactic measures. It is a duty to call attention to threatening dangers in order that protection against them may be provided by the State. For reasons already specified, a modern industry encounters great dangers in connection with mixed poisonings. As a rule, it is impossible to discover existing risks except by an analysis of the injurious effects resulting from the employment.

2. By legislation concerning accidents the Government and the law should require the physician to execute these diagnostic tasks whenever possible in order to avoid inequities in the administration of the law.¹

Recommendations Concerning the Manufacture and Use of Wood Alcohol.

WITH a view of securing more specific and uniform regulations for the use of wood alcohol throughout the country, the National Committee for the Prevention of Blindness, with the cooperation of the Safety Institute of America and the National Safety Council, has been preparing recommendations which would be applicable and fair to the various lines of manufacture in which wood alcohol is used, and which would, at the same time, protect the public from misuse of the poison. These recommendations are

¹ Zentralblatt für Gewerbehygiene, August, 1919, p. 143.

published in a recent issue of *Safety*,¹ in an article by George L. Berry, field secretary of the National Committee for the Prevention of Blindness, who takes advantage of the publicity recently given by the press of the country to cases of poisoning and blindness from drinking wood alcohol, to emphasize the special industrial hazards concerned in its use and to ask for suggestions toward the perfection of the code of regulations. It is stated that "recommendations are especially sought which will develop means of securing proper ventilation for the worker, and will be just in their requirements so far as manufacturers are concerned. It must be determined, therefore, as to where the danger point is reached when considering the ratio of evaporation to the cubic foot air content of a workroom during a given period, say, an 8-hour work day."

The recommendations of the committee follow closely those made some time ago by the department of labor of the State of New York, which appear in Bulletin No. 86 of the New York State Industrial Commission.² Mr. Berry prepares the way for a thorough appreciation of these recommendations by a concise account of the dangers resulting from the use of wood alcohol, its manufacture, the commercial and industrial purposes which it serves, and the laws governing its use. He says:

The harmful physiologic action of wood alcohol may be induced by breathing its fumes, by taking it internally, or by absorption through the mucous membranes of the body. Its effect is usually noticeable very shortly after exposure, although this does not necessarily follow. It usually acts as an acute poison. As before stated, vision may become impaired, total blindness occur, or death itself result. One investigator has recorded more than 1,000 casualties which have occurred during the past 20 years due to the use of this poison. It appears, however, that there are some persons who are practically immune to any toxic effect from it.

The wood alcohol used in the United States is obtained chiefly from the destructive distillation of wood; hard wood, birch, beech, maple, oak, elm, and alder being best for the purpose. * * * After distillation and refinement the final product thus obtained is a commercial wood alcohol, usually sold at 95 per cent strength by Tralles' alcoholometer. It contains from 10 per cent to 20 per cent acetone and varying proportions of other organic impurities.

A law was enacted by Congress in 1906, permitting the use of a tax-free domestic alcohol for industrial purposes for which the high cost of grain alcohol was prohibitive. The law requires that the denaturing shall occur "in the presence and under the direction of an authorized Government officer, with methyl alcohol or other denaturing material or materials or admixtures of the same which will destroy its character as a beverage and render it unfit for liquid

¹ Hazards in the manufacture and use of wood alcohol, by Gordon L. Berry. In *Safety*, Sept.-Oct., 1919, pp. 161-170.

² This bulletin was summarized in an article in the *MONTHLY REVIEW* for May, 1918, pp. 252-254.

medicinal purposes." In addition to the denaturing process, pharmacists are permitted to denature alcohol in small quantities and to sell this for nonbeverage purposes, each container to bear a "poison" label.

Uses of Wood Alcohol.

IN THE arts and crafts wood alcohol is used in the making of hats, artificial flowers, incandescent mantles, and other articles. It is used as a solvent for shellacs, varnishes, and finishes used in the manufacture of pencils, rattan goods, toys, passenger coaches, carriages, furniture, pianos, organs, and picture molding, and in the manufacture of airplanes. As a solvent for lacquers and enamels it is used in the manufacture of brass beds, hardware, lighting fixtures, patent leather shoes, and leather clothing.

In the chemical industries wood alcohol is used primarily as a solvent for fats, volatile oils, camphor, resins, gums, varnishes, stains, shellacs, alkalies, and various salts, and in the manufacture of celluloid; also as an extractive in the manufacture of smokeless powder, fulminate of mercury, and other explosives, and as a reagent for the detection of salicylic acid, the determination of boric acid, the preparation of grape sugar, and as a substitute for ethyl (grain) alcohol for other purposes.

In pharmaceutical and medicinal preparations it is used as an extractive; it is substituted for ethyl alcohol in washes, tinctures, liniments, patent medicines, extracts and essences, such as Jamaica ginger, lemon extract, witch-hazel, bay rum, and numerous cosmetic preparations; and it is used in making the artificial oil of wintergreen, gallicin, methylal, methylene-blue, and methylene chloride.

It is also used to some extent as a fuel, as an illuminant, and as a cleaning fluid.

For many of these purposes denatured alcohol may be used with equal results. It is as cheap, if not cheaper, than methyl alcohol, and, while not always free from the dangerous qualities (dependent upon the nature of the denaturing agent), cases of poisoning from it have been exceedingly rare. The only advantage possessed by the wood alcohol over the denatured in manufacturing seems to be that it is claimed by some manufacturers to have better solvent and drying qualities.

Following are the regulations suggested by the National Committee for the Prevention of Blindness for the uniform control of the use of wood alcohol:

1. Definition: By the term "wood alcohol" is meant that substance whose composition, according to chemical nomenclature, is methyl hydrate, CH_3OH , whether pure or containing other substances as impurities, and is intended

to include either the crude or refined product under or by whatever name or trade-mark the same may be called or known.

2. Any inclosure in which processes are conducted where workmen are thereby exposed to the fumes of wood alcohol to the extent of one part per 10,000 volumes of air shall be isolated in such a manner that these fumes shall not enter other workplaces occupied by employees not immediately concerned with the process.

3. When the nature of the operation will permit, the same shall be carried on under a hood or other partial inclosure leading into an exhaust whereby the wood alcohol fumes shall be removed without reaching the operator.

4. In the case of workplaces where the fumes of wood alcohol in the general atmosphere might prove deleterious to the health of workers, natural or mechanical ventilation shall obtain providing for the exhaust of contaminated air at the rate of not less than 75 cubic feet of air per minute per employee, and likewise providing a complete change of air throughout the workplace every seven and a half minutes or oftener.¹

5. In processes involving the use of wood alcohol in small rooms, tanks, vats, and the like, where adequate general ventilation can not be provided, employees shall work on short shifts of from 20 minutes to not exceeding two hours in length, and shall be equipped with either an oxygen respiratory apparatus, a helmet connected by means of hose to fresh outside air supply, or a satisfactory chemical absorbent helmet. Where workers are dependent upon fresh air supplied from without the inclosure by means of hose connection, they shall in all cases be provided with a life line leading to the outside, and be attended by a fellow operator.

6. All jugs, bottles, cans, barrels, or other receptacles in which wood alcohol is stored shall be labeled as follows:

(Skull and Crossbones Represented)

Poison

Wood Alcohol

May cause blindness or death
if swallowed or inhaled

All containers of this nature shall be kept corked or properly covered when not in use.

7. Where wood alcohol is used by employees in processes which require that the hands of the operators come in continuous direct contact with this material, impervious gloves shall be supplied by the proprietors of factories where such processes are conducted.

8. Whenever it is necessary to enter an inclosure, tank, or still in which vapors of wood alcohol are present, an oxygen helmet or other approved respiratory device, as mentioned in section 5, shall be provided by the proprietors and worn by the person obliged to enter such inclosure, tank, or still.

9. Whenever wood alcohol is used or manufactured in the process as an incident of the business carried on, a printed sign shall be kept posted in all such workrooms, calling attention to the dangerous nature of wood alcohol.

¹ Take, for example, a room 10 feet square with ceiling 10 feet from floor. We have here 1,000 cubic feet of air to deal with. Four workers are engaged herein. For each of these workers 75 cubic feet of air per minute is provided, making a total of 300 cubic feet per minute. In consequence of this, the entire air content of the room would be changed every three and a third minutes. In a workplace 40 by 40 by 10 (16,000 cubic feet), with the same number of workers and the intake of air at the same rate of 75 cubic feet per minute, it would require 53 minutes to effect a complete change of air in the workroom, thus necessitating a readjustment of the intake.

This sign shall be prepared by the department of labor of the State industrial commission for free distribution.

10. While not required in plants where alcohol is manufactured, it is recommended that a runboard or walk shall be provided in each kiln when the temperature of the acetate or lime being dried is such as to make it uncomfortable for the operators to walk thereon. The use of wooden clogs in such work proves very satisfactory when the structural nature of the kiln is such as to prevent a satisfactory runboard or walk being provided.

Qualifications of Industrial Physicians.

PROBABLY the greatest opportunity for the promotion of the public health has arisen through the rapid development in industry of medical departments—manned as these departments should be by medical men giving their full time and thought to the conservation of human lives,” says Dr. C. E. Ford in a paper on The coordination of industrial and community health activities, which was read before the health section of the eighth annual congress of the National Safety Council, held in Cleveland in October, 1919.¹ Dr. Ford then reviews the relationship of the public health department, the medical profession, and the public, and says:

The closest possible relation should exist between the private or industrial physician and the public health official. Public-health departments heretofore have been limited in their relations with individuals for the purpose of teaching personal hygiene. The industrial health department can be made the new and strong arm of the public health department in bringing about precaution in matters of health. Morbidity statistics not now available may be secured, as well as organized assistance in time of epidemic.

The demand for this sort of service by the far-seeing executive, unappreciative of the necessary qualifications of a medical director capable of undertaking the responsibility, has led many medical men, the recent graduate, the unsuccessful or moderately so, into the field of industrial medicine; but until qualified men are created by university training or long and varied experience, the cause of industrial medicine, and in turn of industry itself, will not obtain the largest measure of benefit. It no longer suffices for an industrial organization of any size to employ a part-time physician who utilizes his job to pay office rent or automobile upkeep. The physician who considers accident work or casualty surgery as a mere “pot boiler” or “stop gap” for a period of financial stress will hardly prove ornamental to his profession.

To meet the present-day requirement of a medical director it seems that the following qualifications, in addition to a medical degree, are essential:

At least five years of general practice, in that a knowledge of man and his foibles may be acquired. * * *

The industrial physician should have a knowledge of practice, not necessarily profound, of the fundamentals of industrial relations and these include applied preventative medicine, medical and psychopathic medical investigation, recreation, accident prevention, and the methods leading thereto.

He should have knowledge of the special problems relating to the employment of women and children; some knowledge of pensions and insurance, in-

¹ The coordination of industrial and community health activities, by C. E. Ford. In *Journal of Industrial Hygiene*, New York, December, 1919, pp. 402-407.

cluding liability, group and social; some knowledge of plant organization, which is likely to prove effective in dealing with the problems of labor.

He should have knowledge of employment methods; some notion of job analysis, physical and mental tests, to determine the fitness of applicants; knowledge of race problems, knowledge of industrial training, apprenticeship, continuation schools for training in particular jobs; and at least some knowledge in relation to the cost of living according to local standards.

He should have knowledge of the hours of work in relation to fatigue and output; knowledge of shift systems, rest periods, regularity, absenteeism, etc.

He should have at least a superficial knowledge of the security and continuity of employment in slack seasons, while convalescing from accident or disease, in case of labor-saving improvements, as well as with the advent of old age.

He should have a general knowledge of physical working conditions, safeguards, disagreeable gases and dusts; heating, lighting, ventilation, locker rooms, wash rooms, rest rooms, restaurants, hospitals, laundries, toilets, showers, plant beautification, drinking water. Of course he should be responsible for the physical examination of applicants and the periodic reexamination of employees, as well as the medical attention to families of employees when such is supplied.

He should have very definite knowledge of housing, transportation, recreational and educational facilities; the transfer and replacement of misfits, or as has been said "fitting the square peg to the round hole."

He should be familiar with the follow-up work, especially among new employees and with the injured; the replacement of injured and crippled employees.

He should have at least some knowledge of the athletic and social activities, company stores, commissaries, the type of house suitable for economic administration and housing problems generally.

He should be familiar with labor turnover and its cost; designs and data for the construction and operation of hospitals, lunch rooms, neighborhood and community houses; general education and Americanization, together with a knowledge of broad methods of raising the standard of employees' living conditions and ideals.

Coordination of Federal, State, and Local Agencies to Promote Industrial Hygiene.

THE United States Public Health Service has all the power that may constitutionally be given to a Federal health agency; it has also a distinct industrial health program; and what the country needs for the promotion of industrial hygiene is not extension of Federal authority, but health education of the people in order to secure good financial support to what exists, according to a statement by Dr. Schereschewsky, assistant surgeon-general, United States Public Health Service, in his address before the section on industrial hygiene of the American Public Health Association, at New Orleans, October 28, 1919.¹

¹ Need and method of coordinating Federal, State, and local health agencies in promoting industrial hygiene, by J. W. Schereschewsky. In *American Journal of Public Health*, Boston, December, 1919, pp. 937-942.

The paper begins by calling attention to the lesson of the war in the rejection of 34 per cent of males of military age because of physical defects and diseases, and to the further fact that, as the average age of industrial workers is higher than that of the population group examined for the draft and the physical impairments tend to increase with age, it is to be expected that the number of physical impairments in the industrial group is higher than it was among those examined for the draft. The paper also refers to the introduction of new health hazards into industrial life along with the development of new industries, such as the dye industry. It emphasizes the better concept of the value of the individual to the Nation which the period of reconstruction has brought, and the fuller realization of the "utter folly of permitting needlessly unhealthful conditions to sap the man power of the country, to relegate the individual to the scrap heap at a time in life when he should still have many productive years before him."

The need is, therefore, imperative for a constructive national policy for the better production and conservation of industrial health. What we must aim at is the application of the principles of public health science to the field of industry so as ultimately to secure for all workers practically the same measure of health protection no matter in what part of the country they live. It is evident that, in attaining this end, Federal, State, and local health agencies must play an interlocking and coordinated part in improving health conditions, so that overlapping may be prevented, no power usurped, and yet each governmental agency perform its full duty.

Dr. Schereschewsky then discusses briefly the possibilities of Federal activities in connection with State and local governmental agencies. Existing health powers of the Federal Government, which under constitutional limitations are investigative, advisory, cooperative, and, to a certain extent—not fully defined—regulatory, are in main exercised through the Public Health Service, although other Federal bureaus, such as the Bureau of Chemistry in the Department of Agriculture, the Children's Bureau and the Bureau of Labor Statistics in the Department of Labor, have activities more or less related to the public health.

Under these powers the Public Health Service is authorized (a) to investigate any and all disease-producing conditions; (b) prevent the spread of disease through interstate channels; (c) prevent the introduction of disease into the country from without; (d) cooperate with and aid State and local authorities in carrying out health measures; (e) disseminate information to the public.

With these powers the Public Health Service may perform all functions for improving industrial health which were specified in the program to meet after-the-war needs proposed by the Public Health Service and presented to Congress by the Secretary of the Treasury

with an urgent appeal to provide the funds for carrying it out.¹ In this connection Dr. Schereschewsky emphasizes that "what we need is not so much an extension of Federal authority in health matters as the development of a sense of responsibility for good health conditions in the people of the State and locality. It is the development of this sense of responsibility which will enable the Federal Government to play its really powerful and useful part in improving health conditions generally." He says that the "only limitations on its activities are constitutional limitations and the extent of the appropriations granted by Congress," and expresses the opinion that if in the future public opinion demands an extension of its powers of regulation, either a broader interpretation of the constitutional powers or such constitutional amendments as may be needed may be expected.

The Public Health Service Program.

DR. SCHERESCHEWSKY discusses briefly the following features of the Public Health Service program: Health surveys of industries; Industrial morbidity reporting; Adequate systems of medical and surgical supervision of industrial workers; Establishment of minimum health standards; Improvement of the sanitation of industrial communities; and Civil industrial establishments owned and operated by the Federal Government. Regarding the first, he says, "it is not sufficient to study an industry locally. Surveys must be extended to cover all typical geographical locations of the industry under consideration in order to determine the differences, if any, of its essential occupational hazards, because of variations in location, type of management, provisions for health protection, type and degree of local health organization and the like." New industries which have been established as a result of the war and which will become permanent features in our industrial life must also be studied.

What the Federal health agency may best do in connection with securing adequate systems of medical and surgical supervision of industrial workers is to "study and standardize such systems, outlining the best methods, and creating a demand for the qualified personnel necessary for carrying these into effect. States may help, by exercising their police power, in framing regulations for such services, and in cooperating with industrial communities in establishing industrial clinics."

In the establishment of minimum health standards, the author thinks that "much research is still required to formulate practicable

¹ This program was published in the MONTHLY LABOR REVIEW for October, 1919, p. 241.

standards for existing industries, and to keep pace with the introduction of new industries and new processes."

Attention is called to the highly satisfactory results which have followed the cooperation of the Public Health Service with State and local health authorities in improving health conditions in rural districts by building up local health organizations, and the belief is expressed that "a similar system applied to industrial communities, in cooperation with States, will aid greatly in improving the insanitary conditions all too prevalent in many of our industrial centers. Moreover, the cooperation of the Federal Government in such enterprises is abundantly justified because the benefits reaped are not solely enjoyed by the community but by the Nation as a whole."

Such then is the program of the United States Public Health Service for the improvement of industrial health. We have seen that this consists essentially in investigation, leadership, advice, education, coordination of effort and cooperation. The intention is to supplement, not supplant, State and local government. The authority under law to play this important part is already in existence; all that is needed is money and the acquisition and training of the necessary personnel.

There is, at present, in the States and communities a great need for the coordination of their own health activities, so far as the improvement of industrial health is concerned. While general health functions are exercised by State health departments, and in communities by local health departments, supervision over industrial health is exercised by State industrial commissions, State departments of labor or State departments of factory inspection. In local health organizations little or no provision is made for the improvement of working conditions. There is great need for change and improvement here.

Since the public exercises, as a rule, its police and regulatory powers through the State machinery, the pressing need, so far as States and communities are concerned, is to improve and coordinate their organizations to this end. The program of the Public Health Service, if carried out in the manner discussed, will provide a basic knowledge of conditions requiring remedy, and furnish minimum health standards. If States and communities assume their share of the responsibility, they will provide the funds and machinery to put these standards into effect.

In this manner, so far as geographically practicable, uniform working conditions and effective means for the conservation of industrial health will prevail. Yet we must keep ever in mind that the purpose of any health organization, Federal, State, or local, is not to multiply upon the statute books unnecessary laws, nor to develop political organizations, but to become administrative agents of the public purpose, now approaching realization, to translate into deeds the newly developing sense of responsibility for local health conditions, to help realize, so far as possible, uniform health conditions, and a favorable environment for the growth and development of the present and future generations.

Industrial Dermatoses to Be Investigated by National Safety Council.

AN INVESTIGATION of industrial dermatoses has been undertaken by a special committee of the health service section of the National Safety Council, according to a statement in *Hospital Management* for December.¹ This committee is composed of Dr. Carey P. McCord, director, department of industrial medicine and public health, University of Cincinnati; Dr. C. A. Lauffer, medical director, Westinghouse Electric and Manufacturing Co.; and Dr. C. F. N. Schram, medical director, Fairbanks, Morse & Co. A questionnaire asking for information on the subject has been sent to members of the council. In connection with the questionnaire it is stated that skin diseases of various types are prevalent among workers and that in many instances these conditions result from the manufacturing procedures in which the workers are engaged; that very little information is available as to the frequency of these diseases, the varieties and severity of them, the industrial processes that produce them, and the best methods of protection against, and treatment of, them; and that for this reason the committee has been appointed to compile all obtainable information on the subject and to make recommendations concerning the prevention and control of industrial skin conditions.

Under "industrial dermatoses" the committee includes any noteworthy abnormality of the skin (hair or nails, etc.) that originated incident to industrial working conditions, or was aggravated by such conditions. This, it is stated, will include such lesions as rashes, eruptions, inflammatory processes, hypertrophies (thickening or hardening of the skin) from hard use, such as on the hands or on the lips, low grade chronic skin diseases from long exposure to peculiar light rays or from certain heat processes, skin diseases from constant friction or pressure, loss of hair, etc. Properly speaking, most burns are likely to involve the skin, but inasmuch as the common types of burns from fire have been so well studied this committee will not include this particular skin lesion. Such burns as chemical burns, X-ray or radium burns, etc., are, however, of especial interest. Three instances of industrial dermatoses are mentioned in order to direct attention to other types of work which, upon investigation, may yield helpful information:

1. In industrial plants where wood is stained in imitation of mahogany, where certain color pigments and dyes are manufactured, in which anilin oil or its derivatives are used or manufactured, workmen very often present a skin affection which has been attributed to the poisonous action of this chemical. In

¹ Industrial dermatoses to be investigated. In *Hospital Management*, Chicago, December, 1919, pp. 54-56.

similar chemical manufacturing processes or in munition plants where various compounds are used, such as picric acid, the skin of the forearms sometimes shows an eruption of small pimples with a bronzing and some drying or roughness of the skin.

2. Among men working in tanneries, especially those handling the hides in the vats which contain chemicals, such as lime, acid, or dichromate, an eczema is often observed. This is found particularly on the arms and hands and often pus is formed beneath the skin. Sometimes small ulcers are formed.

3. In the shoe industry in various processes the shoe is pressed against the abdomen for steadying. This pressure for several hundred shoes per day, over long periods of time, results in an hypertrophy of the skin over the area pressed upon. This hardened thickened skin often becomes the site of low-grade chronic inflammatory skin disease. Such conditions are readily preventable.

The following list of industries and trade processes in which cases of industrial skin diseases are known to have developed is given:

Industry.	Trade processes.
Aniline dyes.	
Automobile and parts	Machine shopping (oil).
Bakelite.	
Boots and shoes	Closing and blackening.
Boxes, fancy and paper	Paper box making (glue).
Brass and bronze products	Acid dipping.
Clothing and textiles	Cleaning, dyeing.
Cordage, twine, jute	Combing, stranding (oil).
Dry cleaning and dyeing	Dyeing and cleaning.
Electric apparatus, etc	Pitching dry batteries.
Enameling and japanning	Enameling.
Foundry and machine shop products	Welding, electroplating.
Furniture and cabinets	Polishing and veneering.
Glass manufacturing	Mixing ingredients (arsenic); decorating (benzine).
Halowax.	
Iron and steel mills	Galvanizing (sal ammoniac).
Lime manufacturing	Grinding, slaking.
Marble and stone	Surfacing (oxalic acid).
Oil cloth and linoleum	Mixing ingredients.
Paint and varnish manufacturing	Cleaning with benzine, manufacture varnish.
Paper and roofing paper	Sizing with alum.
Rubber goods	Specialty work, making inner tubes, cold cure.
Soap	Handling soap.
Sterotyping and electrotyping	Tending batteries.
Stoves and furnaces	Metal cleaning (naphtha).
Toys and games	Brazing.

It is stated that the list is far from complete and that very little is known as to the methods for quick results in handling these diseases. Manufacturers are asked to help the committee by answering a list of questions, including the following:

General nature of the product of the plant. What particular processes are involved in the manufacturing of the products of your plant?

Do you know of the existence at the present time, or at any time in the past, of any kind of skin disease among the workers in any part of the plant?

Please supply all possible information as to the nature and characteristics of the skin disease observed.

Have you on hand, or can you obtain, "close-up" photographs of these skin diseases? (Please include photographs when returning this questionnaire.)

In what particular manufacturing processes did such conditions arise? Please supply full details.

What percentage of persons in any involved department were affected? Total number affected?

What has been the method of caring for and treating such patients?

What measures have been installed for the elimination of these conditions?

Are the protective measures instituted adequate?

In other plants in which you may have connections, or with which you may be familiar, do you know of the occurrence of any skin disease attributable to working conditions or to trade processes, etc.? If so, please supply all possible information.

What general and specific processes do you believe this committee should investigate as probable prolific sources of dermatoses? This question does not apply to your own plant, but to industry in general.

Please refer us to any papers you may have published on industrial skin diseases, or to any other published work of this nature, with which you may be acquainted.

Please write your own views with reference to industrial dermatoses—prevalence, frequency, causes, methods of treatment, their significance as an industrial medicine problem, etc.

WORKMEN'S COMPENSATION.

Constitutionality of Workmen's Compensation Laws of North Dakota and Tennessee.

North Dakota.

IN SPITE of the fact that the Supreme Court of the United States has placed the stamp of judicial approval on practically every variety of compensation law in force in its five opinions sustaining as many State laws, an unwillingness to regard such legislation as valid still manifests itself. Objection to the North Dakota statute was raised by an employer, who was engaged in the real estate and loan business, having two clerks in his employ engaged in keeping books, making records, and attending to correspondence and similar work.¹ The claim was advanced that the business is in no sense hazardous or dangerous, and that the act of declaring such establishments to be dangerous is a violation of the rules as to classification, and not within the police power of the State.

The statute under consideration defines hazardous employment as any employment in which one or more employees are regularly employed, excepting agricultural and domestic service and common carriers by steam railroads. Contribution to a State fund, in accordance with rates fixed by an administrative bureau on the basis of the degree of hazard of the employment, is compulsory on every employer coming within the act.

Besides the objection to classification, it was contended that the act violated provisions of the State and Federal constitutions as to freedom of contract and the equal privileges and immunities of citizens.

The action was brought through an application for an injunction to restrain and prohibit the workmen's compensation bureau from in any manner enforcing the act. An interesting preliminary question related to the power of the commission to appear in person in its own defense, the attorney general of the State claiming to be the sole legal counsel of the bureau and the only person entitled to appear

¹ State of North Dakota ex rel. Henry Amerland v. John N. Hagan, commissioner of agriculture and labor and ex-officio member of the Workmen's Compensation Bureau. Oct. 25, 1919. 175 Northwestern Reporter, p. 372.

in its behalf. The attorney general filed a motion to dismiss the application on the ground that it alleged no facts sufficient to constitute a cause of action. One of the members of the bureau, himself an attorney, had filed a return seeking to accomplish the same ends by a somewhat different legal process, and the attorney general undertook to have this reply stricken from the records as being an encroachment upon his exclusive prerogative. The court held that, though the attorney general was the proper legal adviser of the various departments of the State Government, he did not thereby become the client as well as attorney so as to exclude such client from taking legal steps in his own behalf.

Taking up the case on its merits, the classification of all employments as hazardous so as to require insurance was found not to be unreasonable but a proper exercise of the police power of the State under its authority to do away with the old common-law principles and substitute therefor a compulsory compensation system adapted to the conditions and opinions in effect at the present time. This conclusion was sustained by a reference to the recent decision by the Supreme Court of the United States in *Arizona Copper Co. v. Hammer* (39 Sup. Ct. 553). The act under consideration expresses the policy of the legislature of the State as expressed by an overwhelming majority. The legislature having thus determined the industry to be hazardous, the court declined to hold that the employees of the petitioner in this case were under no hazard whatever. The contention as to classification was therefore dismissed, while questions of liability without fault and interference with the freedom of contract were disposed of in favor of the law, various decisions of the State courts and the United States Supreme Court being cited. Nothing arbitrary or unreasonable was found to be embodied in the act, nor was there any unconstitutional delegation of judicial power to the administrative bureau. The exclusion of certain classes of employees does not give rise to objection on the ground of unreasonable discrimination and is in accordance with the provisions of many State laws whose validity has been established by courts of last resort. The petition was therefore dismissed and the act sustained against all the contentions raised.

A partial dissenting opinion was prepared by one justice, who would not declare the act wholly void, but would establish reservations, one declaring that the bureau has no right to collect premiums until a schedule of rates has been made and published, which schedule must be just and reasonable; while as to ordinary clerical service and work in hotels and restaurants, it should be found that there is no inherent and material risk, so that no insurance would be required.

Tennessee.

LESS authoritative than the foregoing is the decision of a circuit court judge of Davidson County, Tenn. (*Harrison v. Phillips and Buttorff Mfg. Co.*). A typewritten copy of the opinion in this case sets forth that the plaintiff, Harrison, sued, by his father as next friend, to recover damages for the loss of both hands while working at a cutting machine. The youth was 18 years of age, and alleged inexperience and ignorance of the dangers and also ignorance of the provisions of the workmen's compensation act which had only recently come into operation. Proper allegations were made for a suit for damages, to which the employers replied that they were operating under the compensation law, so that this law constituted the sole method of redress for the injured employee. The constitutionality of the act was thereupon challenged. The court reached the conclusion that the diversity of the laws of other States and the peculiar provisions of the Constitution of Tennessee differentiated the case from any cited by the attorneys; while the absence of any decision by the supreme court of the State left the judge to be guided by his own impression as to the conformity of the law to the constitution of the State.

The statute excludes coal mining from its operation, as well as the employees of the State and its municipalities. However, there is a provision that coal mines may be brought within the act by written notice by the employer, no reference being made to an option on the part of the employee. These provisions were said by Judge Rutherford to be partial and unreciprocal, rendering the act subject to the criticism of being arbitrary and vicious class legislation, and in violation of the constitution. The failure to include coal mines, while including copper mines, phosphate mines, and others of similar hazard, was said to be a classification not based on reason; while the exclusion of public employees deprived them of equal privileges with other employed persons.

Another objection was to the provision relative to medical service, which service the employer is required to furnish and "the injured employee *shall* accept." This mandatory provision as to acceptance by the employee of the medical aid furnished was said to deprive him of his liberty under the constitution of the State, arbitrarily requiring him "to submit to the treatment and take the medicine and remedies furnished by the doctor of the company regardless of the character of his ailment and injury, and regardless of the incompetency or character of the physician or the deadly effect of his medicines and remedies."

It was also held that the establishment of a fixed schedule for maimings and the limitation of the compensation benefits to a maxi-

mum named in the law did not provide "remedy by due course of law." nor were "right and justice administered" thereby, as required by the State constitution. The abolition of trial by jury was also said to be unconstitutional, and the contention that election constituted a legal waiver of this right was rejected by the court on the ground that there was no adequate freedom of choice under the presumptive provisions of the act.

Further objections were noted, the judge citing the decisions of the New York court of appeals and the Kentucky court of appeals holding the original compensation laws of their respective States unconstitutional, and arriving at the conclusion that "the act as a whole is in violation of the Constitution of Tennessee."

No one who has followed carefully the decisions of the Supreme Court of the United States on the subject can fail to recognize that each point made by Judge Rutherford in his opinion has been ruled against by the Supreme Court in so far as its relation to the Federal Constitution and the police power of the State is concerned. There remains, of course, the question of the construction of specific or peculiar provisions of the Constitution of the State of Tennessee, but against this must be placed the great volume of decisions by State supreme courts, covering every section of the country, holding laws of like tenor constitutional. Furthermore, Judge Neil, a judge of the same county, who sat with Judge Rutherford during the hearing of the case above noted, prepared a memorandum expressing his views, which, "after giving it the most thoughtful consideration," are to the effect that the act is constitutional. Judge Neil admitted that there is much authority to sustain Judge Rutherford's view of the case, but expressed his opinion "that the weight of judicial authority was to the contrary." An appeal was taken to the supreme court of the State.

Final Report on Investigation of New York Industrial Commission.

THE final report on the investigation by Mr. J. F. Connor into the management and affairs of the New York Industrial Commission was submitted to the governor November 17, 1919.¹ This report reviews the two interim reports previously submitted, presents much additional data on the operation of the compensation law, including the results of an actuarial investigation of the State

¹ Report of investigation by Jeremiah F. Connor, as commissioner under sec. 8 of the executive law, known as the Moreland Act, in relation to the management and affairs of the State industrial commission. 83 pp. Two interim reports, reviewed in the MONTHLY LABOR REVIEW for June and September, 1919, dealt with direct settlements and with the management of the State insurance fund.

fund made by Mr. Miles M. Dawson, and contains a number of specific recommendations.

Underpayments.

THE investigation brought out several highly significant facts. Among the most important of these was the large number of underpayments of compensation claims on the part of employers and insurance carriers, particularly stock companies and self-insurers. Of 1,000 unselected cases of direct settlements 114 were found to have been underpaid. This underpayment amounted to \$52,279.84, or \$459 per case. The total underpayments on the basis of the 1,000 cases would amount to \$1,400,000 annually. An analysis of the 114 cases shows that the private stock companies and the self-insured employers were especially guilty of this "short-changing" practice. The following table shows the average amount originally paid by direct settlement, and the additional amount awarded after investigation and rehearing, classified by type of insurance.

AVERAGE AMOUNT ORIGINALLY PAID BY DIRECT SETTLEMENT IN 114 COMPENSATION CASES AND AVERAGE ADDITIONAL COMPENSATION AWARDED ON REHEARING.

Type of insurance.	Number of underpaid cases.	Average amount originally paid by direct settlement.	Average additional compensation awarded on rehearing.
Stock insurance companies.....	79	\$114	\$383
Mutual insurance companies.....	6	29	61
Self-insurers.....	29	157	747
Total.....	114	120	459

Mr. Connor's investigation of lump-sum settlements disclosed the same deplorable practice of underpayment. Of 80 selected cases 20 were found to have been underpaid. The total amount originally awarded on the final adjustment of the 20 cases before a deputy commissioner was \$29,618.67. The total amount awarded on rehearing of these cases amounted to \$52,086.97. The claimants in these cases were underpaid, therefore, in the sum of \$22,468.30, an average of \$1,123 per case. The stock insurance companies were again the chief offenders. Claims against the State fund were also found to have been underpaid. In 11 cases in the Buffalo office, in which claimants had been previously awarded a total of \$2,742.14, the commission on rehearing awarded a total of \$9,579.91. The average underpayment was \$622 per case. These underpayments by the State fund were all confined to the special groups, some of which are composed of individual employers. It is evident that the employers in

these special groups are directly interested in keeping down compensation cost.

The report states that since the enactment of the direct settlement provision of the compensation law in 1915 injured workmen in New York have been defrauded out of at least \$5,000,000. Some of the evils found to exist were stated to be due to activities of insurance carriers, some to defects in the statute, and others to a breakdown in administration. All of the underpayments, says the report, have inured to the financial benefit of insurance companies, self-insurers, and others, such as employers having the Wynkoop Service.

Security.

ONE of the stock insurance companies licensed to do business in the State of New York has been taken over for liquidation by the superintendent of insurance. The failure of this company made the employers insured by the company directly liable for the payment of compensation. This caused much delay in the payment of claims, and, in several cases where the employer was irresponsible, made it impossible for the commission to enforce payment of compensation to injured employees or the dependents of deceased employees. The delay has resulted in great hardships. In the case of a mutual insurance company, which withdrew from business, payments of compensation were made in full. The company had ample assets because of its reserves, and the employers could have been assessed if necessary to cover any deficiency.

According to the testimony, more than 15,000 employers have failed to give security for the payment of compensation, although required to insure by the compensation act. Most of these are small employers, and many of them are financially irresponsible. Awards by the commission arising from claims against these employers are often uncollectible.

"Runners."

ONE evil intended to be obviated by the workmen's compensation law was the ambulance-chasing lawyer and the contingent fee under which the injured employee received only a small part of the amounts recovered for personal injuries. According to the report, a system of "runners" has grown up under the administration of the compensation law, resulting in conditions as bad, if not worse, than under the previous system. A large number of persons in New York City, called "runners," are engaged in the business of hunting up claimants and appearing with them before the State industrial commission. This condition is especially prevalent among Italian

claimants and others employed along the water fronts in Greater New York. In many cases, the claimant, acting in concert with the runner and a physician, perpetrates a fraud upon the employer or insurance carrier. Claims for minor injuries are withheld for several months, with the expectation, almost always realized, that, when the case comes on for hearing, an award of compensation will be made to the date of the hearing. This means a larger sum for the claimant, and that is all paid in one sum, resulting in more to divide with the "runner." In some cases, claimants have been known to report accidents of this character against as many as three different employers.

State Fund.

AS REGARDS the investigation of the State fund, the outstanding feature of the report is the unquestioned financial solvency of the fund and the saving of millions of dollars by employers insured in the fund.

Says the report:

The actuarial report, and the evidence produced before me, show that the total saving to the employers insured in the State fund during this period of time, over and above what it would have cost had the same insurance been carried by stock companies, was approximately \$4,000,000.

This also shows that had the employers insured by stock companies placed their insurance with the State fund they would have saved during the same period, by reason of lower expenses and returns in form of dividends, the sum of \$18,000,000. * * *

The investments of the State fund are all of a high class, amply secured, and not in default as to principal or interest.

The State fund is solvent and possessed of unimpaired reserves, at least equal in value to all liabilities, accrued or to accrue, and of surplus sufficient to warrant dividends to all policyholders at the rates provided and to provide for catastrophes, with a margin over to cover against fluctuation in experience. * * *

The management of the State fund has been greatly handicapped through civil service requirements and by reason of the fact that the salaries of all employees are fixed long in advance. Under the budget system the salaries and expenses of the State fund up to July 1, 1921, have already been estimated in detail. This budget system works well in relation to the ordinary administrative departments, but it is a severe handicap to a State insurance fund in competition with other insurance carriers. No business institution can succeed when it has no leeway in the amount it can expend for salaries and expenses, and it seems impossible to make an accurate estimate at this time for the salaries and expenses of an insurance company for the month of June, 1921. For this reason I recommend that the State fund be permitted to pay its expenses from the premium income under limitations to be laid down by the legislature.

Recommendations.

THE following are some of the more important recommendations submitted:

Make it a misdemeanor for anyone to receive a fee in connection with a claim for compensation except in an amount determined by the commission in order to curb the activities of "runners."

Extend the time for filing claims from one year to two years and provide that the time in disability cases shall commence to run from the date of disability instead of from the date of the accident.

Require a panel of physicians to be designated by the commission, utilizing the advice of recognized medical societies, among whom injured workmen may have free choice, with power conferred on the commission to add to, or to remove from, such panel, at their discretion.

Make claims for compensation and death benefits and awards made thereupon preferred over all other claims against, and debts of, insurance companies as well as employers.

Permit the commission to call and require to be paid into a trust fund the present value of awards against all insurance companies.

Require stock companies to set up and maintain reserves to meet the actual liability upon each claim instead of setting up as reserves a percentage of its premiums.

Self-insurers should be required to set up and deposit reserves in the same manner and in the same amount as other insurance carriers.

All employers failing to give security for compensation should be automatically insured in the State fund, and a summary method established for the collection of premiums and penalties for the period during which the insurance attaches.

The compensation law should be extended to cover all employees without regard to the character of the employment.

The amount of compensation and death benefits should be generally increased, particularly as regards limits.

The State fund should be authorized by law to pay expenses directly out of its premium income under such restrictions as may be laid down by the legislature.

Provision should be made for appointment by the governor of an advisory board selected from employers insured in the State fund to take part in its management and to confer upon them extensive powers of review and regulation.

The provisions for pro rata dividends in the State fund should be amended to give the commission power to declare any pay dividends according to the individual experience of each employer.

The payment of future installments in one sum should only be granted after careful investigation, and each case of this character should be passed upon by a member of the State industrial commission.

In disposing of claims against the State fund the employee should be given a hearing in every case in the same manner as regarding claims against other insurance carriers.

The commission should select the specialists employed by the medical division of the compensation bureau by the medical officer of the State insurance fund, and regulate the fees.

All checks issued in payment of claims by the State insurance fund should be mailed to the claimants instead of delivered personally.

An audit of the State fund should be made at least once each year by an outside accountant appointed by the advisory board.

All profit-making institutions, such as the Wynkoop Service and the Wolff Medical Service, should be eliminated from the State fund.

Mr. Baldwin's Reply.

IN A statement to the New York Industrial Commission, copy of which has been furnished the Bureau of Labor Statistics, Mr. F. Spencer Baldwin, former manager of the State fund, reviews the findings and recommendations of Mr. Connor's report. Most of Mr. Baldwin's statements deal with matters already reviewed in the September, 1919, issue of the MONTHLY LABOR REVIEW. Mr. Baldwin favors most of the recommendations, some of which he has long advocated. His concluding comments upon both the findings and recommendations of the report are as follows:

The counsel and actuary declare that "the usefulness of mutuality is demonstrated," and further, that "the most conclusive demonstration of the benefits of mutuality was in the State fund, where the combined losses and expenses for 1918 were only 47 per cent of the premiums computed at insurance company rates." In this connection he expresses the opinion that the solution of all the difficulties in the field of compensation insurance is "to make insurance in the State fund obligatory upon all employers, automatically attaching, and to provide for assessment and collection of premiums by summary process like other taxes."

At this point we come upon a significant hiatus between the findings of the counsel and actuary and the recommendations of the Moreland Act commissioner. The former favors the grant of a monopoly to the State fund and the elimination of all other forms of insurance. The latter makes no recommendation for the exclusion of private profit-making companies, but merely proposes that employers who are not otherwise insured shall be assumed to be insured in the State fund. The Moreland Act commissioner proposes an amendment making all employers failing to give security for compensation automatically insured in the State fund and to establish a summary method for collection of premiums and penalties for the period during which the insurance attaches.

Whatever justification may be urged for such an amendment upon general grounds, it would unquestionably have the effect of embarrassing the State fund by foisting upon it practically uninsurable risks rejected by the private companies. That is, every employer who could not obtain insurance in one of the companies, or who neglected to take out insurance would be a charge upon the State fund with respect to every accident occurring in his establishment. It is inconceivable that the premiums for such risks, even if they were collectible by summary process, would be sufficient to meet the liabilities. The State fund, moreover, would have no opportunity to adjust rates in advance for these risks or to enforce measures of accident prevention, as the insurance would be forced upon the State fund after the occurrence of accidents.

The failure of the Moreland Act commissioner to make any constructive recommendations for the extension of State fund insurance is thoroughly consistent

with the manifest destructive purpose of his investigation. He assails the Wynkoop Service and the Wolf Service as profit-making institutions, although these organizations render efficient service at low cost, and has not a word of criticism for profit making on a large scale by the private insurance companies, and the payment of commissions to brokers and agents without any proportionate return in service rendered.

Recent Reports of Industrial Accident Commissions.

California.

A REDUCTION in the total number of industrial injuries for the year 1918 as compared to 1917 is a feature of the report of the California Industrial Accident Commission for the year ending June 30, 1919, the following preliminary summary of which has been furnished the Bureau by the commission. In the calendar year 1918 there were 104,767 industrial injuries as compared with 109,988 for 1917, a reduction of 5,221. There were, however, 80 more industrial deaths in 1918 than in 1917, as shown by the total for each year; 1918, 706 deaths; 1917, 626 deaths. The permanent injuries for 1918 numbered 2,100, as against 1,942 for 1917. The temporary injuries were 101,961 in 1918, as compared with 107,420 in 1917.

A brief survey of the 706 industrial deaths shows that 59 occurred in the shipyards of California, 40 on the high seas, 38 were electrocutions, and 19 were from improperly guarded gears and cogwheel. There were eight women killed while at work during 1918. The production of motion pictures caused three deaths, and six policemen and two firemen were killed in the discharge of their duties.

A summary of the dependency following the 706 industrial deaths shows that there were 817 total dependents as the result of 364 fatalities; 153 partial dependents were left in 80 fatal cases; in 246 fatal cases there were no dependents, and in 16 fatal cases the degree of dependency was unknown. The average age of the widows was 37.6 years. The age of the dependent children averaged 8.4 years.

Life pensions were awarded in 13 cases of serious and permanent injuries. There were 21,969 injuries that caused a time loss of 11 days or longer. The remaining temporary injuries did not last longer than the 10-day waiting period. There were 8 life pensions awarded in 1917.

The following table shows the number and the different kinds of injuries for the years 1914 to 1918:

NUMBER AND TYPE OF INDUSTRIAL INJURIES IN CALIFORNIA DURING THE YEARS
1914 TO 1918, INCLUSIVE.

Type of injury.	1914	1915	1916	1917	1918
Deaths.....	691	533	657	626	706
Permanent injuries.....	1,292	1,264	1,709	1,942	2,100
Eyes suffering impairment of vision or removal.....	172	175	202	230	251
Arms amputated.....	28	13	20	28	36
Fingers lost.....	872	798	900	904	1,059
Legs or feet lost.....	45	28	26	32	25
Toe amputations.....	54	40	33	34	51

In 1918 there were 8 women workers killed, 2 in 1917, 4 in 1916, 2 in 1915, and 2 in 1914. The average age of the killed during 1918 was 39.9 years and the average wage was \$25.01 a week, as compared to 38.8 years and \$22.26 a week for 1917. Occupational diseases reported in 1918 numbered 445; in 1917, 506; in 1916, 348.

The sum of \$3,953,030 was awarded California's 104,767 injured workers (including the dependents of those killed) during 1918. The sum of \$1,228,617 represents the medical, surgical, and hospital payments. The total of these two sums gives \$5,181,647.

Compensation in California is compulsory, excepting for agricultural employees, household domestic servants, and those employees whose employment is both casual and not in the course of the trade, business, profession, or occupation of the employer. The latter may elect compensation. Acceptances reported for the fiscal year ending June 30, 1919, numbered 1,618. This number, added to 20,689 previously reported, makes the total now on file 22,307.

The commission has issued 189 certificates of consent to self-insure to employers preferring the certificates to policies issued by the insurance carriers. On June 30, 1919, there was on deposit with the State treasurer securities to the amount of \$3,635,000 to protect the 192,994 employees in the service of the 189 employers.

Report of the Compensation Department.

DURING the fiscal year ending June 30, 1919, there were 1,679 contested cases filed with the commission. This total should not be confused with the total number of industrial injuries. The latter number more than 100,000 each year, and out of that total only 1,679 failed, during the 12 months noted, of adjustment between the employers and employees. It was necessary for the commission to decide the issue in the contested cases. Since the first compensation law became effective on September 1, 1911, down to June 30, 1919, 7,784 claims were filed because of controversies.

The commission disposed of 1,506 cases during the year, being 173 cases less than those filed. Compensation was awarded in 1,002 of the 1,506 cases and denied in 292; 78 cases were settled and 134

dismissed. The extent and duration of disability was the cause of 394 cases; whether injury was in course of employment, the cause of 252 cases; dependency, the cause of 168 cases. The willful misconduct of the employer was the issue in 13 cases, and the willful misconduct of the employee in 27 cases. The troublesome issue of hernia appeared in 69 cases.

The influenza epidemic of last winter and the absence of employees of the compensation department in war service were factors in increasing the average time consumed in the decision of cases from 56.6 days in 1917-18 to 67.8 days in 1918-19.

During the last fiscal year applications for writs of review from decisions of the commission were made to the appellate courts in 48 cases. Writs were granted in 33 cases and denied in 15 cases. Of the 33 writs granted the courts affirmed the commission's decisions in 12 cases and annulled 9 awards. Proceedings were settled and dismissed in 2 cases and 10 cases were pending on June 30, 1919. Including decisions upon cases instituted prior to the last fiscal year, 48 decisions were rendered by the courts, and the commission was sustained in 35 cases, or approximately 73 per cent of its decisions taken up on appeal. There are pending before the United States Supreme Court three writs of error from final decisions of the California Supreme Court affirming the commission's awards.

Injunctions were granted by the Superior Courts of San Francisco and Humboldt County restraining the operation of an unsafe elevator and an unsafe boiler.

Rehabilitation of the Permanently Injured.

THE commission's records show that during the last three years there have occurred in California each year an average of 200 fatal accidents where no dependents were left. Under the new rehabilitation act, the sum of \$350 must be paid into the State treasury for each such death for the purpose of providing for "vocational reeducation and rehabilitation of workmen disabled in industry in this State." From this source there will be available approximately \$70,000 a year for the work, which corresponds with that done for disabled soldiers of war by the Federal Government, as well as by the governments of other countries.

Industrial education is claimed to be the solution for these unfortunate men, and it is stated the industries responsible for their condition should bear the cost. The Federal Board for Vocational Education estimates that it will cost about \$1,000 to rehabilitate the average soldier, based on a 12 month's course. California's "general average" is 12 to 14 years older than the average soldier, and it is not believed a course of more than six months is advisable.

State Compensation Insurance Fund.

THE premium income for the first half of 1919 exceeded \$1,500,000, indicating the likelihood of a total volume considerably in excess of \$3,000,000 for the full year. As the total premium income for all carriers is estimated at \$8,000,000, the fund was, on June 30, 1919, doing about 40 per cent of the entire compensation business of California, in competition with a large number of insurance companies and interinsurance exchanges. More than \$1,000,000 have been returned to policy holders in dividends, and over \$1,000,000 have been accumulated as a net surplus for protection against catastrophe. All legal reserves for losses, unearned premiums, and expenses have been set up and maintained.

The fund's total admitted assets on June 30, 1919, were \$3,398,749.35, and the total net surplus, after deducting liabilities, was \$1,100,923.60. There was invested in Government and municipal bonds the sum of \$2,611,993.26.

New York.

THE annual report of the industrial commission of New York for the year ending June 30, 1918,¹ contains as a portion of the matter presented a report of the commissioner in charge of the bureau of workmen's compensation. This is the fourth annual report, and is of particular interest because of the account given of the development of legislation through what may be called an intensive process, by reason of the wide range of experience rapidly accruing in this the principal industrial State of the Union, and also because of the fact that the legislature meets in annual sessions. Although the law was originally drawn with an unusual degree of care, a very considerable number of changes were found to be necessary to carry out without confusion and with certainty the purposes of its proponents. Many additions to the employments enumerated have been made from time to time, the original list of designated hazardous employments being found incomplete. Finally it was decided to make a sort of blanket coverage by declaring the law applicable to all employers not already covered if they should have in their employment four or more "workmen or operatives." No sooner was this amendment brought to a legal interpretation than its effect was found to be nullified by the construction put upon it by the attorney general of the State. The term "workmen or operatives" was said to have a more restricted

¹ New York. Annual report of the Industrial Commission, for the 12 months ended June 30, 1918. Albany, 1919, pp. 99-159.

meaning than the term "employee," used elsewhere in the act, and refers to manual labor only, and not to clerks or those engaged in professional work. This was contrary to the intention of those interested in procuring the amendment, and the recommendation is made that the word "employees" be substituted for "workmen or operators," so as to avoid the implication of a restriction to manual labor. Another amendment defines the term employee to include all the employees of an employer whose principal business is embraced by the act, thus determining the compensation rights of clerks and office employees, concerning whom question had been raised on the ground that they are not exposed to the hazards of the undertaking or business.

Other amendments are referred to, all tending toward liberality or clarity and the simplification of procedure. Notwithstanding these achievements the commissioner in this report recommended some 26 additional changes. One of these asked for a compensation rate of 75 per cent instead of 66 $\frac{2}{3}$ per cent, an analysis showing that at present the law provides compensation not in excess of 50 per cent of the loss to the injured workmen. The upper wage limit should also be increased from \$100 to \$150 per month, and the maximum weekly benefits from \$15 to \$20. A shortening of the waiting time was also recommended. The widest departure of any recommendation was one proposing to make injuries compensable if arising "in the course of employment" only, instead of "out of and in the course of employment." The ordinary rule of interpretation was said to be too narrow, and a broadening of the act was held to be justified on the basis of a "sound social policy and in a generous view of things as they should be." It was pointed out that a recent court decision encouraged a liberal interpretation, which should be incorporated into law.

The bureau maintains offices in New York City, Albany, Syracuse, Rochester, and Buffalo, but more than one-half the cases (28,983 out of 51,508 docketed as occurring during the year covered) are reported to the New York City office. The following brief table shows the principal facts for four years. The period covered by each year is for 12 months ending June 30 of the year named.

NUMBER OF ACCIDENTS AND COMPENSATION CASES, YEAR ENDING JUNE 30,
1915 TO 1918.

Item.	1915	1916	1917	1918
Number of accidents.....	225,391	273,385	313,406	286,971
Number of compensation cases.....	41,667	52,227	60,132	53,012
Death cases only for same time.....	812	1,366	1,570	1,504
Percentage of compensation cases to whole number of accidents.....	18	19	19	18

A statistical analysis of the compensation cases for the four years, 207,038 in number, is to be made by the chief statistician, the opinion being expressed that this is "a sufficiently large number to give very closely all the laws governing accidents, as well as revealing cost."

Following the report of the commissioner is that of the manager of the State insurance fund. The year covered by this report is the calendar year. The table below affords a review of the principal facts connected with this fund for the three years 1916 to 1918.

COMPARATIVE STATEMENT OF BUSINESS OF STATE INSURANCE FUND.

Item.	1916	1917	1918
Number of policyholders.....	9,966	9,984	8,782
Premiums in force.....	\$797,743.31	\$810,576.79	\$940,902.83
Net premiums written.....	\$2,048,128.91	\$2,694,851.17	\$3,332,841.88
Earned premiums.....	\$2,045,925.52	\$2,681,376.01	\$3,282,965.24
Expense incurred.....	\$188,020.08	\$302,796.92	\$246,639.75
Expense ratio to earned premiums.....per cent.	9.2	11.3	7.5
Losses and loss reserve.....	\$1,890,229.34	\$2,448,465.00	\$1,660,471.70
Loss ratio to earned premiums.....per cent.	92.4	91.4	50.5
Dividends allowed.....	\$240,084.74	\$150,420.83	\$220,356.45
Investments.....	\$1,854,642.50	\$2,680,155.00	\$4,184,288.00
Surplus.....	\$253,179.44	\$398,682.22	\$817,210.50

The reduction in the number of policyholders in 1918 is explained in part by the retirement from business of small employers on account of war conditions, and the cancellation of policies for nonpayment of premiums, due to a closer follow-up system. The volume of premiums in force increased, however, indicating an actual growth of the fund.

Besides the premium income of three and one-third million dollars there was an interest income for the year of \$156,309.25.

Disbursements of benefits for the year were as follows:

LOSSES PAID, 1918.

Medical	\$207,097.47
Temporary total disability	544,061.24
Permanent total disability	1,307.97
Dismemberment	440,010.71
Death—dependency	157,723.38
Death—funeral expense.....	15,286.75
Total losses paid.....	1,365,217.52

SOCIAL INSURANCE.

Provision for Retirement of School Teachers in District of Columbia.

CONGRESS has passed a bill, which received the approval of the President on January 15, granting to the school teachers of the District of Columbia a system providing for the retirement of aged or disabled teachers. Thirty-five States have passed such laws, the majority of which are State-wide in scope although a few are more restricted, applying only to certain cities, counties, or other State subdivisions. It has now at last been recognized by Congress that the best interests of the schools of the District of Columbia demand a retirement system for its school teachers.

The law has the indorsement of the teachers, the Board of Education, the Commissioners of the District of Columbia, and various civic bodies of the District.

In order to provide the funds necessary to pay the annuities which become payable under the act, the law first provides that a sufficient amount is to be deducted monthly from the salary of each teacher to purchase an annuity equal to 1 per cent of his average annual basic salary as fixed by the law of 1906 (Public, No. 254). The amounts so deducted are to be deposited with the Treasurer of the United States to be invested by him and credited to the individual account of each teacher. In addition to the annuity thus created, an amount equal to \$10 for each year of service of the retired teacher is to be paid by the Government from the same fund as the current expenses of the District of Columbia are now paid or may hereafter be paid.

The age of voluntary retirement for old age is 62 years and that of involuntary retirement 70 years. Pensions will not be paid for old age unless the teacher has taught continuously in the public schools of the District of Columbia from his fifty-second year. Teachers 45 years of age or over, or who have taught continuously in the schools of the District for 15 years, who become disabled or physically or mentally unfit may be retired. Credit is given for service as a public-school teacher outside the District of Columbia to the extent of 10

years. However, the last 10 years immediately prior to his retirement must have been served in the public schools of the District of Columbia.

The minimum annuity of a teacher who retires because of age is \$480 and the minimum for retirement because of disability is \$420. The maximum average annual basic salary on which annuities may be computed is \$1,500. Upon retirement the teacher receives for the remainder of his life (1) the annuity which he has purchased out of his salary, equal to 1 per cent of his average annual basic salary for each year of his whole term of service, and (2) the annuity of \$10 per year for each year of service. For example, a teacher who retires at 62 years of age after teaching 40 years at an average annual basic salary of \$800 would receive annually 1 per cent of his average salary for each year of his service, or (\$8 multiplied by 40) \$320, the amount purchased by the teacher; and in addition thereto (\$10 multiplied by 40) \$400, the amount contributed by the Government to be paid from the same fund as the current expenses of the District of Columbia, making a total annuity of \$720.

All teachers accepting positions in the public-school service of the District of Columbia are deemed to have accepted the provisions of the law and the act is in no way to interfere with the right of the school board to discharge a teacher. If a teacher resigns from the service, dies before retirement, or is discharged he or his personal representative is entitled to receive the sums deducted from his salary with interest at 4 per cent, compounded annually.

The sum of \$50,000 is appropriated to carry out the provisions of the act, not more than \$5,000 of which may be devoted to clerical expenses. The Secretary of the Treasury is required to render annually to Congress a detailed and comparative report of all receipts and disbursements under the act.

An interesting question arises with regard to annuities for physical disability. Recently Congress extended the provisions of the Federal employees' compensation act to the employees of the District of Columbia, and it has been held that public-school teachers are included thereunder. The question thus presented is whether a school teacher who is receiving a pension for disability under this law will be permitted to receive compensation for his disabilities under the compensation act also. It will be interesting to note what solution will be made of this problem.

Health Insurance in Resolutions of American Public Health Association.

RESOLUTIONS adopted by the American Public Health Association, at the annual meeting at New Orleans, October 27-30, 1919, include the following relating to the matter of health insurance:

Whereas in the presidential address of Dr. Lee K. Frankel, president of the American Public Health Association, and in the paper presented by Sir Arthur Newsholme, lately the chief medical officer of the local government board of England and Wales, the question of health insurance was dealt with and the need illustrated for some system whereby the health of the people of all the countries represented by the American Public Health Association may receive the greatest degree of care which science makes possible, and

Whereas it has been shown in various countries that this can only be done by Governments assisting through legislation the medical and social agencies at present existing; be it

Resolved, That the American Public Health Association representing, as it does already through its members, a large part of the official work already carried on through Federal, State, and municipal authorities, does hereby urge the appointment of committees in the several countries represented in the Association by their Federal Governments, to study existing methods for the preservation and improvement of the health of the people of these several countries, such as hospital facilities, public health activities, charitable institutions and compulsory health insurance, with a view to reporting some adequate plan for coordinating already existing activities and for extending the application of scientific and social agencies for accomplishing the desired ends.

Maternity Benefit Systems in Certain Foreign Countries.¹

NEARLY all the leading industrial countries of the world have some kind of maternity insurance system. A recent report issued by the United States Children's Bureau¹ includes a study of the systems adopted by Australia, Austria, Denmark, France, Germany, Great Britain, Italy, Luxemburg, Netherlands, New Zealand, Norway, Russia, Sweden, and Switzerland. Particular attention is given to the British system because industrial conditions in that country most closely resemble those in the United States, and because the results of the system have directed attention to the needs of the wage-earning mother in an especially striking manner.

There are three kinds of maternity insurance systems now in use in the above-mentioned countries:

¹ Maternity benefit systems in certain foreign countries, by Henry J. Harris, 1919, 206 pp. United States Children's Bureau Publication 57. Legal series No. 3.

1. Where no cash benefit is provided. The mother is furnished both before and after confinement with skilled nurses and medical attendance, for which she pays if she is able. Example: New Zealand.

2. The State furnishes outright a sum of money from State funds. Example: Australia, which pays the substantial sum of \$25 on occasion of childbirth.

3. The insurance method. Contributions are collected from the employer and insured person and sometimes from the State. Money, medical aid, and institutional care are available on the birth of the child. Example: Great Britain.

Most of the systems provide aid for the unmarried mother. In New Zealand only is she excluded.

To avoid creating additional administrative machinery, these maternity systems have been combined, whenever possible, with the sickness insurance systems.

In 1913-14 the Commonwealth of Australia paid out \$3,284,839 in maternity benefits, a sum representing 3 per cent of the consolidated revenue of the Government. In France, the National Government pays each year \$1,000,000 and the local governments another \$1,000,000 in maternity allowances. Under the abnormal conditions caused by the war the German Government appropriated 5,000,000 marks monthly for maternity benefits.

The operation of the British maternity benefit system is revealing much valuable information in connection with the general question of the relation of economic conditions to public health. It has been made clear, for example, that expectant mothers were in many cases under the necessity of running every kind of risk, because they could not afford to cease work. The assurance of receiving the maternity benefit encourages them to seek, and enables them to obey, medical advice during pregnancy, thus protecting themselves, partially at least, from poverty and the evils of ignorance. The relief afforded from insecurity, with its attendant strain, is emphasized by insured persons when expressing appreciation of the benefit.

The tendency seems to be toward compulsory systems. France and Great Britain, although previously opposed to it, went on record at the last international congress on social insurance at Rome in 1908, as favoring the compulsory plan. No country which has tried a form of maternity insurance has ever abandoned the plan: on the contrary, amending laws have in practically every case extended the system.

The systems in vogue in the various countries are given in considerable detail. In most cases information is given on the following phases of the plans: History of present system; industries or occu-

pations included; persons included; benefits; sources of income; general and financial administration; operations; opinions of legislators, employers, wage earners, social workers, etc., as to effect of the system.

Sources of information are given in practically every case and there is an extensive bibliography of general sources at the end of the volume.

Modification of British Out-of-Work Donation Plan.

ACCORDING to the British Labor Gazette for December, 1919 (p. 524), it was decided that the out-of-work donation scheme¹ instituted in November, 1918, in connection with the demobilization of the war forces and of workers in war industries should be discontinued on November 24, 1919, in so far as it relates to civilian workers. The scheme originally was intended to last for a period of six months, but owing to the high rate of unemployment it was decided in May, 1919, to extend the scheme in modified form for a further six months.

The numbers claiming donation rose rapidly during December, 1918, but the greatest increase was shown during January, 1919, the number at the end of that month being almost double that recorded at the end of December. The maximum point was reached at the beginning of March, when nearly 800,000 were claiming donation, of whom more than half were women. From that date onward there was a rapid decline, but on May 24, when the original scheme should have terminated, there were still over 400,000 claiming donation. The labor situation improved very rapidly at this time and this was reflected in a marked decrease in the number of applicants for donation, though some of the decline was also attributable to the inability of the applicants to satisfy the conditions attached to the extension of the original scheme, particularly in the case of women. By the end of June the total number had fallen to only 233,000 and the number of women applicants was less than a quarter of that recorded at the end of February. The decline continued until September 26, when the total was 100,731, of whom the women applicants formed less than one-third.

On September 22 the molders' dispute began, and this was followed on September 26 by the strike of railway workers. The effect was soon apparent in the increased number of applications from men and boys, particularly in the engineering and iron-founding trades, and on November 21 there were 108,320 male applicants, of whom 45,889 were in these trades. In the case of women's industries, however, which were not affected by the molders' dispute, the decrease continued, and on November 21 there were only 29,317 female applicants for out-of-work donation at employment exchanges.

¹ See MONTHLY LABOR REVIEW for January, 1919 (p. 62), February, 1919 (pp. 88-90), and May, 1919 (pp. 85-100), for discussion of the out-of-work donation plan.

The Gazette gives the number of persons on donation on November 21, 1919—"the late date for which there will be complete records for civilians as well as for ex-members of His Majesty's forces"—as 491,546, compared with 408,708 on September 19, prior to which date there had been a continued decline since the maximum figure of 1,093,400 was reached on May 2. Of the 491,546 persons receiving benefits, 353,909 were ex-service men and women, and 137,637 were civilians; and of these 137,637 persons, 29,317, or 21.3 per cent, were females. On November 28, the latest date for which figures are given in the Gazette, the total number of applications by ex-service men and women had increased to 358,823, of which 5,155 were filed by women.

It is stated that on November 25, 1919, an extension of the donation to ex-service men and women came into force whereby a payment of 20 shillings to men and 15 shillings to women can be made to those persons who have exhausted their rights to donation under the original scheme. Up to December 6, 20,496 applications under the special extension scheme had been approved.

Pensions for Employees of State Industrial Establishments in France.¹

A LAW promulgated October 21, 1919, provides for a minimum retirement pension of 1,800 francs² for each male employee who shall have reached the age of 60 years and been 30 years in the State service, and 1,500 francs for each female employee who shall have reached the age of 55 years and been 30 years in the State service, in any of the following branches: Manufacture of tobacco and matches, State warehouses for manufactured goods in transit, general bureaus of printing and engraving (*atelier du timbre*), bureaus of posts and telegraphs and of mints and medals, military establishments under the supervision of the ministers of war and industrial reconstruction, and arsenals and naval establishments, subject to the regulations concerning premium payments into the national old-age retirement fund, and in consideration of which a pension shall have been or will be payable at a date subsequent to December 31, 1918.

A minimum pension of 1,500 francs is payable to laborers enrolled in the marine service, and laborers enrolled as second class in the army; 1,650 francs to head and first-class workers in the army who have reached the age of 50 years and have served 25 years.

¹ Journal Officiel de la République Française, Paris, Oct. 22, 1919.

² Conversions into United States money are not made owing to fluctuations in value of the franc. Normally the par value of the franc is 19.3 cents.

The pension is increased one-thirtieth for those eligible to retirement after 30 years and one-twenty-fifth for those eligible to retirement after 25 years of service, for each year of service over 30 and 25 years, respectively.

These minima will be substituted for total or partial invalidity compensation now in course of liquidation, subject to the same conditions as to date.

An employee may be retired for total disability after 15 years of service, but in that case the pension for those required to serve 25 years to be eligible to retirement shall be reduced by one twenty-fifth for each year not served up to 25. An employee may be retired for partial disability after 20 years of service, unless the administration provides him with other employment, but in that case the pension shall be reduced one-thirtieth for each year not served up to 30. In neither of these cases is age to be taken into consideration.

Length of service in the Army or Navy on account of which a pension is allowed is counted in establishing the right to a pension and the period of service, but shall not enter into the computation for determining the amount of pensions, which shall be awarded upon the years of civil service and reduced by one-thirtieth or one-twenty-fifth, as the case may be, for each year not served of the 30 or 25 years required.

The regulations in force concerning laborers' widows' pensions are modified as follows, effective January 1, 1919: A widow's pension, whether the husband was retired or died while in service after at least 15 years of service to the State, dates from the day following the death of the husband, provided marriage was contracted at least two years before the date of cessation of service, or that he leaves one or more children issues of that marriage prior to the cessation of service.

The widow's pension is equal to one-third of that to which the husband was entitled at the time of his death, either by length of service or as an invalidity pension. In case there are left three or more children under 16 years of age, or who are unable to perform any work, this pension is increased to one-half of that to which the husband was entitled at the time of death.

When the number of children under 16 years of age, or disqualified for work, falls below three, the pension is reduced to the minimum above set.

Full orphans, if pensioned because of the death of the father, are entitled to one-third, and if three or more in number to one-half, of the pension to which the father would have been entitled; if pensioned because of the death of the mother, they are entitled to one-

third of the mother's earned pension. These pensions are payable until the youngest child shall have reached the age of 16 years.

Employees in the naval service may, within six months, voluntarily change their status under present pension laws and become subject to this law. When the status is so changed the length of service is considered, both in determining the eligibility for retirement and in calculating the amount of pension.

Reduction of State Subsidies to Unemployment Funds in France.

ACCORDING to the Journal Officiel (Paris) for October 18, 1919, the President of France, on October 17, signed a decree amending previous decrees relating to State subsidies to municipal and departmental unemployment funds.

By decree dated April 19, 1918, provision was made for the establishment of unemployment funds, and the amount to be paid to workers partially unemployed as a result of lack of raw materials or coal was fixed at 3 francs per day for adults and 2 francs per day for boys under 16 for each full day of unemployment. The new decree modifies this provision by increasing the unemployment benefit to 4.5 francs for adult males and to 3 francs for boys under 16 years of age, provided, however, that the total relief so granted does not exceed one-half the wage locally current.

Under the decree issued January 26, 1919, the State subsidy payable, between February 1 and November 15, 1919, to unemployment funds for workers partially unemployed for the reasons stated above, was fixed at 60 per cent of the relief granted, on condition that 20 per cent be contributed by employers. This decree has been modified by a provision that from November 16, 1919, to March 15, 1920, the State subsidy shall be 40 per cent and the employers' contribution 30 per cent, and beginning with March 16, 1920, the subsidy shall be 33 per cent and the employers' contribution not less than one-third of the expenses resulting from relief paid to their staff.

The decree of October 17 also amends the decree of January 14, 1919, which provided that the State subsidy to funds granting unemployment relief to persons out of work for other reasons than lack of raw materials or coal, for a period of 10 months from the issue of the decree, should be 75 per cent of the relief paid in cash, within certain limits. The new order fixes the subsidy for the period November 16, 1919, to March 15, 1920, at 50 per cent of the amount of relief paid, and restricts it to 33 per cent of the amount of relief on and after March 16.

New Regulation of Maternity Insurance in Germany.¹

A LAW enacted on September 26, 1919² has amended, abrogated, and supplemented a number of those sections of the German Workmen's Insurance Code which deal with maternity insurance. Briefly summarized the principal provisions of the law are the following:

Women in confinement who during the year preceding confinement have been insured against sickness for at least six months on the basis of the Workmen's Insurance Code or in a miner's sick fund shall be entitled to the following maternity benefits: (1) An allowance not to exceed 25 marks³ for the services of a midwife or medical treatment if such are needed during pregnancy; (2) a lump sum of 50 marks for defraying the costs of confinement; (3) a pecuniary maternity benefit to the amount of the pecuniary sick benefit but of not less than 1.50 marks per day, inclusive of Sundays and holidays, for 10 weeks, of which at least 6 must fall in the period after delivery; and (4) to mothers nursing their infants at the breast a nursing benefit to the amount of half the pecuniary sick benefit but of not less than 75 pfennigs per day, inclusive of Sundays and holidays, for a period of 12 weeks after delivery. The same benefits are payable to the wives of insured workmen and to the daughters, stepdaughters, and foster daughters who live with them in the same household and are themselves exempt from the obligation to insure, and also to all women of moderate means in confinement, but with the restriction that their pecuniary maternity and nursing benefit, which, as they are not insured, can not be based on the pecuniary sick benefit, shall amount to 1.50 and 0.75 mark per day, respectively. The law defines a woman of moderate means in confinement as a married woman in confinement whose husband's and own income in the calendar or fiscal year before delivery has not exceeded 2,500 marks, or an unmarried woman in confinement whose yearly income has not exceeded 2,000 marks. This income limit is to be increased by 250 marks for each living child under 15 years of age.

In the case of insured women in confinement or of insured persons' wives, daughters, stepdaughters, and foster daughters who live with them in the same household and are themselves exempt from insurance, but not in the case of women of moderate means in confinement, the by-laws of sick funds may extend the period during which a

¹ Reichs-Arbeitsblatt. Berlin, Oct. 27, 1919, p. 773.

² Reichs-Gesetzblatt, 1919, pp. 1757-1763.

³ Owing to fluctuations in the value of German money, conversions into American money are not made. Normally the par value of the mark is 23.8 cents and of the pfennig 0.0024 cent.

pecuniary maternity benefit is payable to 13 weeks and that during which a nursing benefit is payable to 26 weeks. The by-laws of sick funds may also increase the amount of both the pecuniary maternity benefit and the nursing benefit of insured persons' wives, daughters, stepdaughters, and foster daughters who are themselves exempt from insurance up to one-half of the pecuniary sick benefit of the insured person, and may also grant medical treatment to sick noninsured members of the family of an insured person as well as a funeral benefit in case of death of the consort or a child of an insured person. In place of the pecuniary allowances for costs of medical and midwife's services and of confinement, the sick funds, miners' sick funds, etc., may also grant free treatment by a physician and midwife as well as the required medicines. In such a case all women in confinement, without exception, and therefore also women of moderate means, are entitled to these benefits in kind.

In order to put the sick funds on a financial basis which will enable them to grant these increased maternity benefits, the new law has increased the regular contributions to sick funds from 4.5 to 7.5 per cent of the basic wage of the insured persons. The contributions may not be increased to an amount exceeding 7.5 per cent of the basic wage except when it is required for covering the payment of the regular benefits or upon joint resolution of the employers and insured persons. Funds which grant medical treatment to sick noninsured members of the family of an insured person and a funeral benefit in the case of death of the consort or a child of an insured person, may levy a higher contribution from insured persons who have a family.

The granting of the benefits to the insured persons and to the members of their families is to be effected through the local sick fund to which the insured person belongs. In the case of women of moderate means in confinement the benefits shall be paid by the general local sick fund of the district of which the woman in confinement claims legal residence, and if such a fund does not exist the rural sick fund shall pay the benefits. Persons employed in agriculture and domestic servants, who under articles 418 and 435 of the Workmen's Insurance Code are exempt from the obligation to insure, must be granted by their employer from his own means the maternity benefits provided by the present law for those female members of their families who are not subject to compulsory insurance. If the employer fails to provide the benefits prescribed by the law the rural sick fund or the general local sick fund shall on request pay these benefits to the persons in question. The employer must then refund the benefits to the sick fund. Benefits paid by sick funds to women of moderate means in confinement are refunded

to them in full by the national treasury, which also refunds one-half of the regular benefits paid to insured persons' wives, daughters, stepdaughters, and foster daughters who are themselves exempt from compulsory insurance. The sick funds shall report all disbursements for maternity benefits to the insurance office of their district, which shall have the right to refuse refund of improperly made disbursements. The decision of the insurance office in this respect may be appealed to the superior insurance office, the decision of which is final.

In so far as under other legal provisions a family member exempt from insurance has a claim to compensation for damages due to maternity, this claim is transferred to the sick fund or the agricultural employer up to the amount of the benefits paid by them. If a sick fund has thus been compensated the national treasury shall have a claim to one-half the compensation received by the sick fund. In so far as an unmarried woman of moderate means in confinement has a claim on the father of her child for compensation of costs of confinement and other costs, her claim is transferred to the national treasury. Claims for support of a woman in confinement against relatives responsible for her support are likewise transferred to the national treasury. The father of the child and the relatives are jointly liable to the national treasury as debtors.

Thus the new law has not enlarged the sphere of persons entitled to maternity benefits as compared with the emergency decree on maternity benefits issued April 23, 1915, but it has considerably increased the benefits. The lump-sum benefit has been increased from 25 to 50 marks, the daily pecuniary benefit from 1 mark to 1.5 marks and the duration of this benefit from 8 to 10 weeks, the allowance for services of a midwife and physician from 10 marks to 25 marks, and the daily nursing benefit from 50 to 75 pfennigs. A noteworthy innovation is that according to the new law all legal claims for compensation of a woman in confinement due to maternity are transferred to the sick funds which pay the benefits and to the national treasury, up to the amount of the maternity benefits granted.

LABOR LAWS.

New Transport Act in Great Britain.

A NEW railroad-control act passed the British Parliament and received royal assent on August 15, 1919. The act provides for the creation of a ministry of transport and for a unified governmental control of all railroads and other means of transportation. The ministry also has the power to extend or improve existing lines or to construct additional facilities. This control is temporary, the law lapsing after two years. Only those terms of the act which directly affect the employees of the railroads are here considered.

The minister of transport is given authority to fix railroad tariffs and wages. At the same time the financing of the railroads remains as far as possible in the hands of the owners.

No employee is to be required to accept conditions of employment or remuneration less favorable than those now enjoyed by said employees. If any question arises as to the application of that principle the matter is to be referred to a permanent arbitrator or board of arbitration appointed by the Lord Chancellor. The findings of such an arbitrator or board shall be carried out forthwith. All employees are guaranteed the maintenance of all their existing rights as to wages, terms of employment, pensions, sick benefits, and other allowances. Advisory committees are provided for, which the minister may consult before formulating general policies such as may affect rates, wages, and services.

Sections Affecting Industrial Relations.

THE principal sections of the law affecting industrial relations are here reproduced in full:

3 (c). The directors and other persons concerned with the management, and officers and servants of any undertaking of the whole or part of which, or of the plant whereof, possession is retained or taken shall obey the directions of the minister as to the user thereof, and any directions of the minister in relation to the undertaking or part or plant thereof of which possession is retained or taken—

I. As to the rates, fares, tolls, dues, and charges to be charged: subject, however, to the provisions hereinafter contained respecting references to the advisory committee established for advising as to directions on the matters aforesaid;

II. As to the salaries, wages, and remuneration and conditions of employment of persons employed on or in connection with the undertaking;

III. As to the working or discontinuance of the working of the undertaking or any part thereof, including directions as to keeping open or closing of any stations;

IV. For securing that the permanent way, rolling stock, plant, appliances, or equipment, whether fixed or movable, are satisfactory in type and design;

V. As to the carrying out of alterations, improvements, and additions which the minister considers necessary for the public safety or for the more efficient and economic working of the undertaking;

VI. For securing cooperation between undertakings and for securing the common user of facilities, rolling stock, and equipment, whether fixed or movable;

VII. For affording running powers over their system, or any part thereof, to the owners of any other undertaking;

VIII. For securing that manufacturing and repairing facilities and auxiliary and ancillary services shall be used, and the purchase and distribution of stores shall be conducted, in such manner as may be most conducive to economy and efficiency.

Nothing in this section shall be construed as authorizing the minister to compel the owners of any such undertaking either to incur capital expenditure, or to draw upon their reserve funds, for new works or capital improvements to an extent which would seriously interfere with their finances, it being the intention that the financing of the undertakings from a capital point of view shall remain as far as possible with the owners.

* * * * *

21 (1) For the purpose of giving advice and assistance to the minister with respect to and for safeguarding any interests affected by any directions as to rates, fares, tolls, dues, and other charges or special services, a committee shall be appointed, consisting of five persons, one being a person of experience in the law (who shall be chairman) nominated by the lord chancellor, two being representatives of the trading and agricultural interests nominated by the board of trade, after consultation with the associated chambers of commerce, the central chamber of agriculture, and other interests concerned, one being a representative of transportation interests nominated by the minister, one being a representative of labor interests nominated by the minister of labor, after consultation with the parliamentary committee of the Trades Union Congress and other interests concerned, together with, if deemed advisable, one additional member, who may, at the discretion of the minister, be nominated from time to time by him.

(2) Before directing any revision of any rates, fares, tolls, dues, or other charges, or of any special services, the minister shall refer the matter to the committee for their advice, and they shall report thereon to him, and where such revision is for the purpose of an increase in the net revenue of any undertakings which the minister determines to be necessary, the committee shall also advise as to the best methods of obtaining such increase from the different classes of traffic, having due regard to existing contracts and the fairness and adequacy of the methods proposed to be adopted. Before prescribing the limits of rates, tolls, or charges in connection with a new transport service established under section 9 of this act, the minister shall refer the matter to the committee for their advice.

(3) The committee, before reporting or advising on any matters referred to them under this section, shall, unless in their discretion they consider it unnecessary or undesirable to do so, give such public notice as they think best

adapted for informing persons affected of the date when and the place where they will inquire into the matter, and any persons affected may make representations to the committee, and, unless in their discretion the committee consider it unnecessary, shall be heard at such inquiry, and if the committee in their discretion think fit, the whole or any part of the proceedings at such inquiry may be open to the public: *Provided*, That for the purpose of this provision the council of any city, borough, burgh, county, or district shall be deemed to be persons affected in any case where such council or any persons represented by them may be affected by any such proposed revision as aforesaid.

(4) The committee shall hear such witnesses and call for such documents and accounts as they think fit, and shall have power to take evidence on oath, and for that purpose any member of the committee may administer oaths.

(5) There shall be paid out of moneys provided by Parliament to all or any of the members of the committee such salaries or other remuneration as the minister, with the consent of the treasury, may determine.

(6) For the purposes of this section, "special services" means the services mentioned in section 5 of the schedule to the orders relating to railway rates and charges, and in the corresponding sections of the schedules to the orders relating to canal tolls, rates, and charges, confirmed by various acts passed in the years 1891 to 1894.

* * * * *

(23) (1) For the purpose of giving advice and assistance to the minister in connection with the exercise and performance of his powers and duties, the minister shall set up a panel of experts, and of impartial persons of wide commercial and trading experience, appointed from nominees, after consultation with the various undertakings and interests concerned, of the various classes of undertakings affected by this act, and of labor, trading interests, local authorities, and such other interests as he may deem desirable.

(2) Before exercising any of the powers under subsection (1) (b) of section 3 of this act, to the exercise of which the owners of the undertaking concerned object, or establishing new transport services by land or water, the minister shall refer the matter to a committee selected by him from the said panel.

(3) The advisory panel or any committee to whom any matter is referred under this section shall, before reporting or advising, if they see fit, give public notice and permit any person affected or likely to be affected to place his views before them either orally or in writing.

(4) Any member of the advisory panel, or any committee thereof, or of any other committee established under this act, for giving advice and assistance to the minister, shall be considered to be acting entirely in a confidential capacity.

Creation of Central Wage Board.

ASIDE from this act but somewhat connected with it there may be noted the fact that the organizations of employees whose members are concerned in the negotiations with the Government for the standardization of railroad wages have made arrangements with the Government for dealing with questions of wages and conditions of employment during the period of the present control of railroads under the ministry of transport by a central board of five railway managers and five representatives of the trade-unions. The em-

ployee representatives are to comprise three members from the National Union of Railwaymen and two from the Associated Society of Locomotive Engineers and Firemen. Each side has power to add a sixth member.

The following item from the *British Labour Gazette*¹ explains the powers of this central board:

Failing agreement by this central board, matters in dispute and belonging to the category mentioned, namely, wages and conditions of service, will be referred to a national wages board, consisting of four railway managers, four railway workers (or their representatives), and four users of railways (of whom one shall be nominated by the parliamentary committee of the Trades Union Congress, one by the Cooperative Union, one by the Federation of British Industries, after consultation with other industrial organizations, and one by the associated chambers of commerce, after similar consultation), with an independent chairman appointed by the Government. It has been agreed by the unions concerned that no strike shall take place on account of a dispute arising on these matters until one month after the question in dispute has been referred to the national wages board.

Local committees, to which matters of purely local and other than national importance are to be referred, will be set up, and discussions are taking place at the present time as to their constitution, scope, and functions.

The Government and the railway men are also considering what representation shall be given the latter in connection with the new railroad control act. The advisory committee or panel mentioned in section 23 of the act has been set up. It consists of 16 members, 12 railroad managers and 4 representatives of the workers. It includes the following members:

Mr. C. Aldington, Great Western Railway; Mr. J. Bromley, Associated Society of Locomotive Engineers and Firemen; Sir Alexander Kaye Butterworth, North Eastern Railway; Mr. C. T. Cramp, National Union of Railwaymen; Mr. C. H. Dent, Great Northern Railway; Sir Francis Dent, South Eastern & Chatham Railway; Sir Sam Fay, Great Central Railway; Sir William Forbes, London, Brighton & South Coast Railway; Mr. D. A. Matheson, Caledonian Railway; Mr. F. Tatlow, C. B. E., Midland Railway; Right Hon. J. H. Thomas, M. P., National Union of Railwaymen; Sir Henry Thornton, K. B. E., Great Eastern Railway; Mr. A. G. Walkden, Railway Clerks' Association; Sir Herbert Walker, K. C. B., London & South Western Railway; Mr. Arthur Watson, C. B. E., Lancashire & Yorkshire Railway; Sir Thomas Williams, London & North Western Railway.

Checkweighmen Act of Great Britain.

THE widely spread practice of paying for the mining of coal by weight, the miners being authorized by law to appoint a checkweighman, received additional extension by a British law of recent enactment (ch. 51, 9 and 10 Geo. 5). This law, known as the Check Weighing in Various Industries Act, 1919, applies to—

¹ December, 1919, p. 516.

The production or manufacture of iron or steel, including any process of founding, converting, casting, rolling, or otherwise finishing iron or steel.

The loading or unloading of goods, whether as cargo or stores, into and from vessels.

The getting of chalk or limestone from quarries.

The manufacture of cement and lime.

Any other industry to which the provisions of this act may be extended by regulations made by the secretary of state.

The appointment of the checkweighmen in these industries is to be made in the form provided for by the coal mines regulation acts. (These acts authorize the persons interested to employ at their own cost a person to be stationed at the place appointed for the weighing of the coal, and at each place appointed for the making of deductions. Such persons are to have every facility for carrying on their work, but not to impede or interfere with the progress of the work of the establishment.)

Special provisions are made in annexed schedules for the different kinds of industries, so as to adapt the methods used to the specific conditions. Where the quantity is determined or estimated otherwise than by weighing, the checkweigher is to perform such duties as the circumstances render proper. Penalties are provided for the disclosure of any trade secret or other information with regard to the employer's business which the checkweigher may become aware of by reason of his position. Employers are required to post notices and distribute copies of the regulations made for the carrying out of this act. Disputes are to be settled by arbitration either by a specially appointed arbitrator or by a judge of the county court.

Labor Laws of Czecho-Slovakia.¹

THE LAW of October 28, 1918 (No. 11, Compiled Laws), provides for the temporary validation in Bohemia of the Austrian laws, and that of December 10, 1918 (No. 64, Compiled Laws), recognizes for the time being the validity of the laws of Hungary in Slovakia. The Austrian labor laws, with the exception of the law relative to sick funds, being considered more liberal than those of Hungary, it is intended to introduce them gradually also in Slovakia.

Several modifications of the Austrian labor laws have already been enacted and are here briefly set forth.

¹ La Conférence du Travail et l'État Tchéco-Slovaque. Ministère de la Prévoyance Social, Prague, 1919.

The Austrian Civil Code was amended March 19, 1916 (No. 69, Compiled Laws), in so far as it related to labor contracts. This amendment provides for the payment of the contract wages at customary periods. Workers who have been in the same employment over two weeks are entitled to the receipt of wages even when, owing to sickness, disability due to an accident, or force majeure, they do not perform work, but only for a period not in excess of one week. Workers are also entitled to pay for loss of time due to the act of the employer. An employer is required to organize his establishment and working appliances so as to safeguard the life and health of employees, and if the employee lodges and boards with the employer's family, consideration must be given to the health, morals, and religion of the employee.

The term of service ends as a rule on the expiration of the labor contract. Common laborers who are paid by the hour, day, piece, or task, may, however, be discharged on one day's notice, or on Saturday when the employee is dependent mainly on his labor or when weekly wages have been agreed upon. Skilled laborers who are dependent mainly on their labor may be discharged only after four weeks' notice, and all others only after two weeks' notice. Similar notice of his intention to quit service is required on the part of an employee. Contracts may be terminated for valid reasons. Employees, upon termination of contract, may demand a certificate setting forth the length of employment and the character of service performed. The certificate shall, however, not contain any note or remark which will create a moral prejudice against the employee.

Hours of Labor.

THE LAW of December 19, 1918 (No. 91, Compiled Laws), establishes an 8-hour day or a 48-hour week. In certain classes of work (transportation, agriculture, etc.) agreements for a longer day are valid provided the 48-hour week or a total working time of 192 hours during a 4-week period is observed. The act applies in general to all industrial establishments. State-operated factories and establishments, public and private associations, foundations, groups, or societies engaged in work for the public welfare or of public utility, mines, below or above ground, and metallurgical establishments, and to persons regularly employed in agriculture and forestry not living with the employer's family and paid by the day, week, or month. Persons living with the employer and under contract for a period exceeding one month, or persons in personal service, including those receiving payment in kind, shall be allowed 12 hours' rest in each 24, of which 8 must be unbroken and at night. Laborers shall have a rest

period of 32 consecutive hours each week, which must include Sunday, and persons working in the home of the employer shall have a rest period of not less than 18 consecutive hours each week. In establishments operated continuously, with three shifts, the Government may authorize a 52-hour week, and a reduction of the weekly uninterrupted rest period from 32 to 24 hours, twice within a three-week period. In case regular operation is interrupted by reason of a catastrophe or accident, or if public interests or other special circumstances require it, the number of hours of labor may be increased not to exceed 240 hours extending over 20 weeks, in any one year, provided there is no other method of making up the loss of production.

Night work.—Work between 10 p. m. and 5 a. m. is prohibited, but certain classes of establishments may be authorized to work at night. In these the work may be divided into two shifts, but no night shift shall work more than seven hours, male persons alone being permitted to work.

Sunday rest.—Sunday rest is obligatory in all industries and occupations, but in certain classes of work, such as the cleaning of dwellings, repairing, that of watchmen, the taking of a yearly inventory, work to safeguard against imminent danger, and in establishments in which work can not be stopped without affecting their normal operation, or in the preparation of perishable products, etc., Sunday work may be authorized.

Employment of Women and Children.

THE employment of women in industrial and commercial establishments and in mining during the six weeks following parturition is prohibited, except that upon a physician's certificate they may be employed in mines after four weeks from parturition. All women engaged in industry, agriculture, or household duties are covered by the obligatory sickness-insurance law. (*See Social insurance.*)

The law of December 19, 1918 (No. 91, Compiled Laws), prohibits the employment of women between 9 p. m. and 5 a. m., except that the employment of females over 18 years of age may be authorized for short periods in establishments preparing perishable products (seasonal industries), in establishments where work is continuous, and in work demanded by the public interest, if such work is not arduous. This law has been interpreted to include dairies, hotels and restaurants, railroad ticket offices, telephone and telegraph services, daily newspapers, theaters, etc., hospitals, asylums, prisons, etc. The law relating to daily hours of labor is applicable to women with the additional provision that "for women employed in factories the consecutive weekly rest of 32 hours shall begin Saturday not later than 2 p. m." Certain groups of establishments have been granted authority to dis-

regard this provision when the weekly hours of labor per week do not exceed 48. Females under 18 shall not be employed in work detrimental to their physical development. Males only are permitted to work underground. The provisions of the Austrian law relating to dangerous and unhealthy processes or occupations remain in force.

The same law extends the laws for the protection of minors to all classes of young persons. The employment of children under 14 years of age, unless they shall have completed their schooling, is prohibited. Males under 16 and females under 18 may not be employed in any work injurious to their health and physical development. All persons under 18 years of age working in industrial establishments shall be granted the leave required for attending continuation and trade schools.

The employment of children under 12 years of age is absolutely prohibited. Those 12 years of age and over may be employed without compensation but only under conditions not injurious to health, nor detrimental to their physical or moral development, and provided they continue to comply with the school attendance law. They may not be employed before school hours in the morning, nor during the two hours preceding the afternoon session. In agriculture and domestic labor this prohibition is limited to the noon recess. Work during vacation is limited to four hours daily in agriculture, and six hours in domestic service. Labor on Sunday and religious holidays and all domestic and agricultural work between 8 p. m. and 6 a. m. is prohibited. In restaurants and saloons it is prohibited to employ children at waiting on patrons and pouring drinks. Neither may they be employed in public shows. In other occupations work is prohibited between the hours of 8 p. m. and 7 a. m. Rooms assigned to domestic work must conform to requirements of hygiene and safety. Children working for wages who do not belong to the family of the employer may be paid in part in kind, but only in clothing, food, lodging, and school supplies, and never in alcoholic beverages. The distribution of spirituous liquors and tobacco during working hours is prohibited.

Work on State Account.

THREE decrees are in force providing for State supervision of labor conditions on work done by contractors. Employers must, so far as possible, employ citizen laborers, preference being given to those living near the place where work is being done. Employers are required to take all necessary precautions to safeguard the life, health, and morality of employees, and, in construction work, to assure their lodging and board. Wages must be paid in legal tender. Minimum

wages in the clothing industry are fixed by a wage board composed of State officials, employees, and employers. In fixing such wages, not only the character of the work but also living conditions in the locality shall be considered. Employees engaged in the finishing processes are not subject to any deduction from wages for light, heat, or materials or working tools furnished. They are to be reimbursed for thread purchased by them.

Social Insurance.

THE LAW of December 10, 1918 (No. 63, Compiled Laws), as amended, requires that every citizen shall work to his full physical and intellectual capacity, either as an employer or employee, and provides that all persons whose wages are the principal source of their income and who are unable to secure employment, demobilized soldiers, and persons especially worthy of assistance are entitled to unemployment benefits not in excess of 5 crowns¹ per day. If the employee is the head of a family he is allowed 1 crown in addition for the wife or common-law wife and 1 crown for each child under 14 years of age, the total benefits in no case to exceed 10 crowns per day. If suitable work is provided in the district in which the employee is residing it must not be refused. This law was enacted as a mere temporary measure suited to conditions after the termination of the war. The Government has under consideration the enactment of a definitive law on unemployment relief. The draft of this law provides for unemployment insurance through workers' mutual aid organizations, which are to be under State control and will be subsidized by the State. Only members of such organizations are to have a claim to unemployment relief.

The Austrian laws relative to employment bureaus, jurisdiction of the common law and industrial arbitration courts, the right of association and combination, and collective contracts remain in force.

Sickness insurance.—Sickness insurance is obligatory (law of May 15, 1919, No. 68, Compiled Laws) for persons regularly working for wages or salary, under contract or as apprentice, and whose wages are their principal source of income. Those earning over 3,500 crowns a year are exempt. All industries—agriculture, forestry, railroad work, mines, and domestic labor—are included. For certain classes such insurance is elective. Employees of the State, Provinces and communes, and of public foundations, when paid a fixed yearly salary and entitled to at least 39 weeks' sick leave, with pay, are excluded.

From the first day of sickness insured persons are entitled to free medical attendance, including the services of an obstetrician and

¹ Value not known. The par value of the Austrian crown is 20.3 cents.

midwife if necessary, and to the necessary medicines and other therapeutic means. In cases of sickness in excess of three days a pecuniary benefit equal to 60 per cent of the wages of the insured person, but not exceeding 6 crowns per day, shall be granted for a period not exceeding 39 weeks. In maternity cases the insured are entitled to the pecuniary sick benefit for as long as they are unable to work and after parturition during a period not in excess of six weeks. If the mother nurses her child at the breast she receives in addition to the regular sick benefit a nursing premium equal to half the sick benefit for a period of 12 weeks. In case of death of the insured his survivors are granted a funeral benefit equal to 30 times his daily wages, but never less than 90 crowns. Insured persons may have free treatment in a hospital instead of the medical treatment, medicines, and pecuniary benefit described. One-half of the pecuniary benefit is, however, payable to the descendants and ascendants of the insured person during the entire period of his stay in a hospital.

The by-laws of sick funds may permit sick, funeral, and maternity benefits to be granted also to those descendants and ascendants of an insured member who are dependent on him and are not subject to compulsory insurance. Special funds may be established for purposes connected with sickness insurance, such as aid to sick persons and convalescents, prevention of contagious disease (tuberculosis, venereal diseases), alcoholism, etc.

The means for the support of the various sick funds are procured by assessments levied in the form of a percentage—not in excess of 25—of the daily wages of the insured persons. The employees pay two-thirds and the employers one-third of the premium rate fixed by the fund to which the workman belongs. The employer is held responsible for the payment of the entire premium. If the worker does not receive any cash wages the employer must pay the whole premium.

Six kinds of sick funds are authorized to insure workers against sickness: (1) Regional funds, (2) establishment funds, (3) trade-union funds, (4) mutual funds, (5) benevolent funds, and (6) various authorized mutual aid societies. All funds authorized to insure workers against sickness are subject to State control.

Accident insurance.—Accident insurance is compulsory for all persons employed in factories, blast furnaces, mines, quarries, shipyards and subsidiary establishments, in building operations, in establishments manufacturing or using explosives, in agriculture and forestry when using machinery requiring other than man power, on railroads, in transportation, in cleaning work, in storage houses, and in theaters, and for fire departments, night watchmen, stone cut-

ters, well diggers, etc. All accidents, whether the fault of the employee or of the employer, are compensable, but the employer is held responsible when the accident is due entirely to his intentional act. The employer bears the entire burden of the cost of insurance by contributing to the insurance fund 2.7 per cent of wages paid by him. Compensation is payable beginning with the fifth week of disability, benefits for the first four weeks being paid by the sickness fund. When yearly earnings exceed 6,000 crowns, that amount only is considered in calculating the compensation, which shall not be more than two-thirds of the annual earnings. If death ensues a funeral benefit of 150 crowns and survivors' benefits become payable.

Annual Leave by Law for Manual Workers in Austria.¹

IN JULY, 1919, the Austrian ministry for social welfare (*Staatseamt für Soziale Verwaltung*) submitted to the National Assembly a bill providing for an annual vacation for all classes of wage workers as being necessary to the maintenance of health. The bill had the indorsement of the executive committee of the Federation of Austrian Trade-Unions (*Gewerkschaftskommission*), was passed by the National Assembly, and became effective on August 21, 1919. Thus an old demand of the working class has for the first time received legal sanction through enactment of a national law.

The law is applicable to all male and female workers covered by the Industrial Code or article 2 of the mercantile employees' law, to all workers employed in undertakings not subject to the Industrial Code and belonging to the State, a Province, a commune, or other corporation, to all railroad workers, workers of navigation, public amusement and theatrical enterprises, and to miners. The circle of persons covered by the law may be extended by the minister of social welfare.

The law grants to workers employed one year in the same establishment annual vacation of one week with full pay computed on the basis of the average weekly earnings during the last 12 weeks of the year in question. If the worker has been receiving board as part of his compensation he is entitled to receive, in addition to his pay, an amount equivalent to one day's pecuniary sick benefit for

¹ Soziale Praxis und Archiv für Volkswohlfahrt, p. 904. Berlin, Sept. 11, 1919. Also, Arbeiter-Zeitung. Vienna, July 27, 1919.

each day of his leave. Workers who have been employed over five years in the same establishment, and juvenile workers under 16 years of age, are entitled to two weeks' annual leave with pay.

In order to prevent employers from evading the obligation by dismissing a worker before the leave falls due, the law provides that leave must be granted if at least 10 months' service has been completed or if 10 months has elapsed since the previous leave. Workers who have given notice themselves before their leave falls due or who have been dismissed for some weighty reason lose all claim to leave.

In establishments where not more than five workers are employed the leave may be divided into two parts. If an employer is short handed during the leave season and can not employ temporary labor, he may increase the regular hours of labor to the extent of two hours a day; but this must not affect the individual worker for more than 14 days consecutively in a year. The rates of pay for such overtime must be 50 per cent higher than the ordinary rates. The works councils are to be consulted with respect to the date on which leave shall begin, the possible division of leave in two parts, and overtime work made necessary owing to the granting of leave. These questions may, however, also be regulated through collective agreements and through executive order of the minister for social welfare. Contraventions of the law are punishable in accordance with the provisions of the Industrial Code and the mine workers' law.

HOUSING.

Comparative Cost of Building, 1913 and 1919.

By LEROY K. SHERMAN, PRESIDENT, UNITED STATES HOUSING CORPORATION.

THE United States Housing Corporation has completed the construction of some 6,000 houses and 64 dormitories. These houses are located in 25 different places in the United States, from Vallejo, Calif., to Bath, Me. Most of this work was done during the period of the war emergency and at a time when efficiency meant speed rather than cheapness, so that the actual cost of these houses was greater than would be the case under normal conditions. However, with the experience of the builders and the estimating and purchasing departments of the United States Housing Corporation, it has been possible to compile comparative estimates of cost of a typical six-room house in 1913 and in July, 1919, under normal conditions of procedure.

For the purpose of comparing the cost of dwelling-house construction there was selected a six-room frame dwelling house. This house is a very common and popular type of dwelling and is described on page 375 of Volume II of the Report of the United States Housing Corporation. It is two stories with basement, having the living room, dining room and kitchen on the first floor and three rooms, with bath and toilet on the second floor. The outside dimensions of the floor plan of the house are 22 feet 8 inches by 23 feet 8 inches. The cubical content is 14,900 cubic feet.

Specifications.

THIS house has a monolithic concrete substructure wall 8 inches thick from footings to the bottom of first-story floor joists, and is plastered from grade to the top of the wall with white cement plaster. The cellar is entirely paved with a 4-inch-thick concrete floor. Subsoil drainage under the cellar floor consists of 4-inch broken stone and a line of 4-inch-diameter tile drainpipe placed around the inside face of footings. The walls of superstructure, both interior and exterior, are of 2 by 4 inch studs sheathed, papered, and weather-boarded on the exterior, and lathed and plastered (3 coats—scratch, brown, and hard white coat) on the interior walls. The roof is

sheathed, papered, and covered with a good quality slate. All flashings and counterflashings are of galvanized iron painted with two coats of metallic paint.

Wood floors are doubled, with a layer of deadening felt between. The first and second floors are trimmed throughout with baseboard having shoe and cap moldings; all window and door openings are trimmed both sides, windows have stools and aprons, and door openings have hardwood thresholds. All rooms, excepting kitchen, bath and closets, have picture molding. A kitchen dresser is provided, and a medicine cabinet with mirror is placed in the bathroom.

The woodwork throughout is B grade, or better, yellow pine. All exterior woodwork is painted three coats of lead and oil paint, and, with the exception of the kitchen and bathroom, all interior woodwork is given two coats of varnish stain. The woodwork of the kitchen is painted two coats of lead and oil paint and the bathroom woodwork three coats of enamel. All wood floors are given two coats of boiled linseed oil. All interior plastered ceilings and walls, excepting those of kitchen and bathroom, are painted two coats of cold-water paint. Walls of kitchen and bath are sized and painted two coats of oil paint.

A complete hot-air system is provided for the heating with a "Liberty Heater," which is a combination furnace and gas heater, with stovepipe, damper, damper regulator, check damper, and an entire set of firing tools. The furnace has been tapped for the installation of hot-water coils. All pipes and stacks are covered with 16-pound paper asbestos. All registers are cast iron, black japanned, lattice design with iron borders.

The plumbing system is modern. Soils and vertical stacks are of "medium" cast iron, with all joints calked with oakum and leaded. Clean-out wyes with brass screw plugs are placed at the foot of vertical risers. Floor drains have been provided in the cellar floor and in that of the side entry for the refrigerator. The fixtures are supplied with both hot and cold water, hot water being supplied from a 24-gallon boiler connected to the kitchen range, which is also provided. With the exception of the water-closet and flushing tank, the fixtures are of enameled iron. The two fixtures named are of porcelain.

The electrical work is B-X work, according to the requirements of the National Board of Fire Underwriters. The fixtures consist of a one-light ceiling fixture, a cast canopy 5 inches in diameter with translucent glass shade, for the kitchen, first and second story halls, and bedrooms, a one-light fixture with cast canopy and chains supporting a 12-inch opal glass bowl for semidirect lighting for the dining room, and a two-light fixture of the same kind for the living room. The fixtures throughout are of metal-brush brass finish,

Cost.

THIS house was built between October, 1918, and May, 1919, at Watertown, N. Y., by the United States Housing Corporation, in connection with 114 other houses in the same vicinity, for the sum of \$3,908. According to a tabulation of the Housing Corporation the estimated cost of this house, if built in 1913, would have been \$2,932, exclusive of overhead and profit, with a few exceptions, and the estimated cost if constructed in July, 1919, would be \$4,930, exclusive of contractor's profit and overhead, with a few exceptions. The estimates show an increase in cost of building from 1913 to 1919 of 68 per cent, the increase for labor being 65 per cent and the increase for materials 71 per cent. The prevailing union scales of wages for laborers and mechanics in the building trades for the city of Boston in 1913 and 1919 were used in making this comparison. These scales were selected as representing to a fair degree the average increase in wages in the building trades for all parts of the country.

The following is an analysis of the unit prices for labor as given on the estimate sheets:

ANALYSIS OF UNIT PRICES FOR LABOR, 1913 AND 1919.

No.	Item.	Unit quantity.	Unit cost.	Quantity per hour.	Labor rate per hour.		Per cent of increase.
					1913.	1919.	
1	Excavation (general).....	Cubic yard.	\$0.50	0.50	\$0.25	\$0.50	100
2	Excavation (trench).....	do.	.75	.333	.25	.50	100

26	Electrical work.....	do.			.50	.75	50
27	Heating.....	do.					

Example: Item No. 6, labor, cost per hour, 1913:

Carpenters:

400 sq. ft.— 8 hrs. at \$0.50=\$4÷400 sq. ft.= \$0.01, making forms.

400 sq. ft.— 8 hrs. at .50= 4÷400 sq. ft.= .01, placing and bracing.

Laborers:

400 sq. ft.— 8 hrs. at .25= 2÷400 sq. ft.= .005, placing and bracing.

400 sq. ft.—16 hrs. at .25= 4÷400 sq. ft.= .01, wreck, clean and pile.

40 hrs.

\$0.035 unit cost.

400 sq. ft. ÷ 40 hrs. = 10 sq. ft. per hr. 10 sq. ft. × \$0.035 = \$0.35, labor rate per hour.

Labor cost, 1913 = \$14.00; labor cost, 1919 = \$24.00. 10 ÷ 14 = 71 per cent labor increase for 1919.

Cost of Building Materials and Union Scale of Wages.

THE unit prices used in the estimate for materials were obtained from the Bureau of Labor Statistics of the Department of Labor and from the published records in the various trade journals. The total percentage increase in cost of materials for the six-room houses which we have used for illustration is 71 per cent.

The rates of wages per hour for the various building trades in 1913 were obtained from a bulletin of the Bureau of Labor Statistics. The rates for 1919 are those contained in the report of the proceedings of the thirteenth annual convention of the Building Trades Department, American Federation of Labor, under date of June 4-7, 1919.

The percentage of increase in wages in 1919 over 1913 varies in the trades used in our estimate from 36 per cent to 100 per cent. The total percentage increase in the cost of labor in the six-room frame house which we have used for illustration, is 65 per cent. The total percentage of increase for both labor and materials is 68 per cent.

These percentages of increase are comparable with the data presented by Benjamin A. Howes in the October, 1919, issue of *Country Life*, which shows an increase in building labor of 75 per cent and an increase in building materials ranging from 30 to 100 per cent.

A recent publication by the Information and Education Service of the United States Department of Labor entitled "Economics of the Construction Industry," which furnishes very complete statistics of the average annual hourly scale of building trades from May, 1913, to May, 1918, gives the increase in wages as of May, 1918, as 31 per cent. The report of the United States Bureau of Labor Statistics on wholesale prices records the rise in prices of all building materials exclusive of steel as about 75 per cent in 1918 and 84 per cent in the last quarter of 1918.

It thus appears that there has been a material increase in the cost of building labor in 1919 over 1918, but this increase has only followed the corresponding increase in cost of building materials and

other commodities. The costs of both building labor and material now appear fairly comparable with other increases in the cost of living.

In addition to the estimate for the six-room frame house, estimates have been prepared for a similar house built of hollow tile and also one of brick. The comparison of the three is as follows:

COMPARISON OF COST OF SIX-ROOM DWELLING HOUSE.

Type of house.	1913	1919	Per cent of in- crease.
Frame house.....	\$2,532.36	\$4,930.58	68
Hollow-tile stuccoed house.....	3,362.65	5,665.18	68
Brick house.....	3,546.34	6,038.73	70

In the comparison of estimated costs as of 1913 and 1919, the same amount of materials and the same rates of output of labor are used in each case. The rates of output of building labor are, of course, subject to wide fluctuations. The rates assumed here have been compiled and checked by the estimating division of the United States Housing Corporation and by builders of practical experience. The efficiency of labor in the comparison presented is taken as being the same in 1919 as in 1913. With the exception of a period in the spring of 1919, many building contractors maintain that the efficiency of building labor is not so high now as it was in 1913.

In compiling these tables the cost of labor and material was figured out for each item for the house built as of 1913. The 1919 costs were arrived at by applying the percentage of increase in labor and material to the 1913 figures. It should be borne in mind that this is an estimate based on average prices and average work under union labor. There is a wide variation in the cost of labor and the cost of materials in different parts of the country, and this same house built under different conditions from those assumed here may easily vary \$500 or more in cost.

Overhead, Land, and Utilities.

THE foregoing estimates do not include public utilities, contractor's profit, and overhead or architect's fee.

From the report of the "Economics of the Construction Industry" by the United States Department of Labor, as well as from the real estate division of the United States Housing Corporation, the indications are that there has been little increase in the value of land occupied by the ordinary dwelling house. For the purpose of further comparing the total cost of the frame house, with land, appurtenances, and overhead, we will assume the following:

Cost of land (\$1,000 per acre—7 lots per acre).....	\$143.00
Cost of public utilities per lot.....	400.00
Contractor's profit and overhead.....	15 per cent.
Architect's fee—plans and supervision.....	6 per cent.

Based upon the foregoing comparison the increase in the cost of construction of a modern 6-room frame house between 1913 and 1919 becomes 66 per cent. The total cost of erection of houses in 1913 and 1919 is as follows:

TOTAL COST OF ERECTING SIX-ROOM FRAME HOUSE IN 1913 AND 1919.

Item.	1913	1919
Net cost of building.....	\$2,932.36	\$4,930.58
Cost of land at \$1,000 per acre.....	143.00	143.00
Cost of public utilities.....	400.00	680.00
Contractor's profit and overhead, 15 per cent.....	439.85	739.59
Architect's fee—plans and supervision, 6 per cent.....	202.33	340.21
Total.....	\$4,117.54	\$6,833.38

Existing Housing Problem with Reference to Increased Cost of Building.

THE housing shortage to-day is almost universal. It exists not only in the cities of the United States but in almost every other country. The housing shortage in this country due to war activities and the increased cost of construction has been estimated at 1,000,000.

The market value of a house differs from most commodities. In most commodities the consumption closely approximates the supply and the selling value follows and corresponds with the increase in cost. The selling value of dwelling houses as a commodity is governed largely by rentals which the house will bring. By far the greater part of the house rentals come, of course, from houses built during prewar costs. The rent of these houses has increased in general not over 20 per cent. This represents an increased income to the owner without an increased expenditure of capital.

An entirely different situation exists with respect to the owner renting a house built in 1919. A 20 per cent increase in rents based on 1913 costs will not bring the owner of a new building a rental sufficient to warrant him investing his money in dwellings for rental purposes. The new owner has to compete with the numerous owners of property built in prewar times.

We are speaking generally. Of course, there are many cities where the housing shortage is so acute that new buildings are built and readily rented or sold at prices considerably in excess of the 1919 estimates which we have presented. Unquestionably as the housing shortage becomes more acute and as the older houses become obsolete and go out of the market all rentals and selling values of property will tend to approach the prices based on the cost of the new house.

During this transition period the wits of people have been sharpened in an effort to meet the problem. They are using some lessons learned from the Government's housing experience during the war and they are supplying construction and financial methods which will reduce the cost of the building to the occupants. The housing problem during the transition period is being solved by more efficient methods of construction and financing so that economies in production will tend to reduce the cost of new dwellings as a compromise to meet the rising values of the older property.

A large part of the new dwelling construction now being undertaken is handled by housing companies. The membership of these companies consists largely of public-spirited citizens who are content to finance the construction of dwellings at a modest return on their investment, and they realize the incidental value which will revert to their city and their local industries by adequate housing facilities. The economies which are obtained by these housing companies are accomplished by a reduction in the overhead cost which we have mentioned in our estimate of the total cost of the dwelling to the occupant. These economies, effected by a comprehensive plan, are as follows:

1. Reduction per house in the contractor's percentage or profit and the architects' and superintendents' fees by the construction of a hundred or more houses at one time under one contract.
2. The reduced cost of materials by purchase in carload lots for wholesale building.
3. The more efficient utilization of highly subdivided and specialized labor by the ability to install a more efficient construction organization where a number of houses are built at one time.
4. The use of standards and uniform sizes in designs which do not, however, make the houses appear to be standardized.
5. The improvements in arrangement of utilities and conveniences in the house, as well as the artistic arrangement of the buildings, drives, trees, and planting, so that the added attractiveness of the house will invite the occupant in spite of an increased rental or cost.

State Loans for Cheap Dwellings in France.¹

THE law of April 12, 1906, amended December 23, 1912, relative to State loans to enterprises engaged in the building of cheap dwellings, was further amended October 24, 1919, so as to provide for multiple dwellings (apartments). Its principal provisions are as follows:

The benefits of this law apply to multiple dwellings when the annual rent of each apartment does not exceed at the time of construction the maximum shown in the following table:

¹ Journal Officiel de la République Française, Paris, Oct. 26, 1919.

MAXIMUM ANNUAL RENTAL OF APARTMENTS FOR THE CONSTRUCTION OF WHICH STATE LOANS ARE GRANTED IN FRANCE.¹

Communes, etc., to which law is applicable.	Maximum annual rent of apartments consisting of—					
	3 or more rooms each at least 9 square meters (96.9 square feet), with kitchen and water-closet, and having a total floor area ² of—	2 rooms each at least 9 square meters (96.9 square feet), with kitchen and water-closet, and having a total floor area ² of—	1 room at least 9 square meters (96.9 square feet), with kitchen, and having a total floor area ² of—	1 sleeping room, isolated, at least 9 square meters (96.9 square feet), having a total floor area ² of—		
Communes having a population of 5,000 and under.....	35 to 45 square meters (376.7 square feet) to 454.4 square (feet).	More than 45 square meters (484.4 square feet).	25 to 35 square meters (269.1 square feet) to 376.7 square (feet).	15 to 25 square meters (161.5 square feet) to 269.1 square (feet), with or without water-closet.	More than 25 square meters (269.1 square feet), with water-closet.	9 to 15 square meters (96.9 to 161.5 square feet), with or without water-closet.
	France, 300	France, 325	France, 250	France, 270	France, 165	France, 100
Communes having a population between 5,001 and 30,000 and suburbs of communes having a population within a radius of 10 kilometers (6.2 miles) of 30,001 to 200,000.....	390	425	300	325	230	120
	1.40	1.50	1.65	1.70	1.80	1.90
Communes having a population between 30,001 and 200,000, suburbs having 200,001 or more within 15 kilometers (9.3 miles), and the greater suburb of Paris, i. e., communes at a greater distance than 20 kilometers (12.4 miles) and not greater than 40 kilometers (24.9 miles).	480	520	390	425	325	150
	1.65	1.75	1.85	1.95	2.05	2.15
Communes of more than 200,000 population and the smaller suburbs of Paris, i. e., within 10 kilometers (6.2 miles).	600	650	460	520	390	210
	2.00	2.10	2.20	2.30	2.40	2.50
City of Paris and the Province of Seine.....	720	760	600	650	465	240

¹ Conversions are not made in this table owing to fluctuations in value of the franc. Normally the par value of 1 franc is 19.36 cents.² Between walls and partitions.

The annual rental of individual dwellings shall be fixed at 4 per cent of actual cost. The State may advance through the mortgage bank not more than 200,000,000 francs and the Bank of Deposits and Consignations (under Government supervision) is authorized to advance not more than 300,000,000 francs to such enterprises.

Loans are to draw 2 per cent interest annually if used in the acquisition or construction of individual cheap dwellings, or in the acquisition of small properties, under the provisions of the law of April 12, 1906, that of April 10, 1908, and subsequent laws.

If used for the acquisition or construction of cheap dwellings or small properties for rent only, the rate of interest is $2\frac{1}{2}$ per cent.

Provision is made for loans for completing dwellings now under construction:

Small Land Holdings for Laborers.¹

WITH a view to assisting laborers and families of small means to acquire small land holdings, the Provinces and communes are authorized by Parliament to purchase and resell, after subdivision, lands and rural estates. Communes are to acquire these lands under the law of April 5, 1884. Purchases by Provinces are limited to the budget prepared by the prefect and especially authorized by the provincial commission.

In all subdivisions necessary public roads must be provided for. Lots designed as homes with a garden shall not exceed 10 ares (0.25 acre), and the price of a rural homestead shall not exceed 10,000 francs.

The selling price shall be so fixed as to result neither in a gain nor a loss, and all sales must be made for cash. Property so acquired can not be transferred for 10 years, and if purchased for a home can not be used for any other purpose. The purchaser must engage to cultivate it either by himself or with the help of members of his family.

When lands have been purchased by the Province and after the division into lots has been made, plans are placed in the office of the prefecture and branch offices of the Province and are open to the public for two months. Notice is given through the official bulletin and posted in all communes. The price of each lot shall be given in these notices.

In awarding lots the commission shall consider the morality of the applicant and the number of children in the family, and preference shall be accorded to those who for the payment have arranged for long-term loans, either in a mortgage association or through a district agricultural loan fund.

¹ Journal Officiel de la République Française. Paris, Nov. 1, 1919.

LABOR ORGANIZATIONS.

Fifty-First Annual Trades-Union Congress, Great Britain.

A FULL report¹ of the Fifty-first Trades-Union Congress (Great Britain), held at Glasgow September 8 to 13, 1919, has just been received by this Bureau. This congress was made up of 851 delegates representing 5,283,676 trade-unionists, "the largest representation of organized labor that this or any other country has witnessed." The chairman of the congress was Hon. J. H. Thomas, M. P., of the National Union of Railwaymen, and the secretary was Hon. C. W. Bowerman, M. P., of the London Society of Compositors. The second day was devoted to a discussion of the report of the parliamentary committee, which dealt with a large number of subjects, among which were the International Labor Conference, the labor provisions of the peace treaty, international labor legislation, and the proposal for the amalgamation of all unions. The report on the last mentioned was not very definite, and it was decided to continue the work along this line. A resolution subsequently presented to the congress instructing the parliamentary committee to take action on the question of an amalgamation of all trades, with a view to the organization of workers under one heading, was lost.

On the third day the question of nationalization of the coal mines came up for discussion, and a resolution was adopted instructing the parliamentary committee to interview the Prime Minister and in the name of the entire labor organization to insist upon the Government's adopting the plan of national ownership and joint control of the industry recommended by the majority report of the coal commission. The resolution rejected the Government's scheme for the governance of the industry "as a scheme contrary to the best interest of the Nation." The vote on the resolution was 4,478,000 for and 77,000 against.²

¹ Report of Proceedings at the Fifty-first Annual Trades-Union Congress, held in St. Andrews Hall, Glasgow, on Sept. 8 to 13, 1919. London, 1919. 408 pp.

² For discussion of the situation in the British coal industry see MONTHLY LABOR REVIEW for May, 1919 (pp. 109 to 114); August, 1919 (pp. 78 to 86); and October, 1919 (pp. 23 to 30).

The congress adopted a large number of resolutions, among which may be mentioned those—

Recommending that hours of labor of persons employed on manual labor should not exceed 44 per week and that systematic overtime should be declared illegal.

Demanding that the Government provide pensions for mothers "on the principle of schemes now in operation in many of the States of America."

Recommending the abolishment of the present poor-law system and the adoption of a measure such as will "secure relief in all cases where necessary without the deprivation of citizen rights and without the stigma of pauperism."

Protesting against the Government's delay in dealing with the question of old-age pensions, and demanding that the act be amended so as to provide a pension of £1 per week for all persons 60 years of age and upward.

Indorsing the attitude taken by the woodworking trade-unions in refusing to accept the system of payment by results as a condition of employment in the furniture trade.

Demanding the repeal of the conscription act and the immediate withdrawal of the British troops from Russia.

Recommending that the parliamentary committee urge upon the Prime Minister the necessity of instituting a national scheme of collective death insurance by which families and individuals may be provided with adequate funeral benefits.

Favoring the adoption of the metric system.

Calling upon the Government to deal with the shortage of dwelling houses "by making it compulsory for local authorities to prepare and carry out immediately adequate housing schemes in their particular areas" and "by the Government making grants free of interest, as will enable local authorities to erect suitable houses at a reasonable cost to the people."

Demanding complete nationalization and control of the land.

Instructing the parliamentary committee to urge the Government to prepare and elaborate within a period of two years a definite policy of State purchase and management of the railways and all other forms of transport and their administration by the State under provision which will assure that those who are engaged in the industry shall have a direct share in determining the conditions under which it is to be carried on.

Declaring for nationalization of shipping, shipbuilding, and ship repairing.

Calling upon the Government to deal with unemployment "(a) by regulating national or local work so as to provide for additional em-

ployment during seasonable or local fluctuations of trade," and "(b) by providing adequate maintenance, and by organizing schemes of useful work and of training with full maintenance for all workers who can not find suitable employment."

Requesting that the National Insurance Act be amended to provide (1) for an increase in the sickness benefit to £1 per week for the first 26 weeks; and 10s. for the remainder of the sickness or disablement; (2) for an increase in maternity benefits to £3; (3) for medical service and drugs to be available day and night continuously, and for the present system of payment to doctors to be revised, the cost of such increase to be met by the employers and the State.

Declaring that the Workmen's Compensation Act should be so amended as to provide among other things that workmen who are totally incapacitated through accidents arising out of and in the course of their employment be paid compensation equal to full earnings before the accident: that payment of compensation shall be made from the date of incapacity: that compensation be paid to all persons incurring or contracting injury, disease, or disability in the course of or arising out of employment.

The next annual meeting of the congress will be held at Portsmouth in September, 1920.

Development of Woman-Labor Organization in Germany During the War.

IN a special article in *Soziale Praxis*,¹ based on official statistics and various publications on woman labor, Dr. Charlotte Leubuscher discusses the development of woman labor organization in Germany during the war. The author says:

The organization of gainfully employed women may be effected in two ways: Either in unions with exclusively female membership, or jointly with male fellow workers. While the former principle of organization is prevailing among salaried employees and in numerous higher callings, the combining of male and female workers of the same occupation is by far the most frequent form of organization among manual workers. Only the sectarian trade-unions of women workers and the Christian Trade Society of Women Home Workers form an exception to this rule. It is only natural that common organization of men and women is the predominant form of organization, because women are being employed in the same occupations as men and in many instances have replaced men, and owing to this fact it is in the interest of male workers to include the female workers in their organizations. It was therefore to be expected that the increased employment of women during the war, and particularly their invasion of occupations hitherto exclusively exercised by men, would find expression in an increase of the female membership of trade-unions. To be sure, it had to be taken into account that a large number of the woman workers who during the

¹ *Soziale Praxis und Archiv für Volkswohlfahrt*. Berlin, Aug. 14, 1919.

war had taken up industrial employment with the intention of discontinuing such employment later on would show neither inclination nor understanding for belonging to a labor organization. Moreover, the favorable condition of the labor market during the war and the facility with which wage increases were obtainable made many a woman worker believe that the joining of a labor organization would involve merely a useless expenditure. Finally, it should be kept in mind that during the war the trade-unions worked with a greatly reduced staff and under difficult conditions, and were therefore prevented from carrying on an energetic propaganda among newly employed woman workers.

An official compilation recently published in the *Reichs-Arbeitsblatt*¹ indicates the fluctuation during the war of the female membership of the three most important trade-union groups, the central federations of the Free (Social-Democratic) Trade-Unions, the Christian Trade-Unions, and the Hirsch-Duncker societies. This compilation shows that the female as well as the male membership had decreased up to the end of 1915. Beginning with 1916 the former is again increasing, while the latter showed the first signs of an increase in 1917. At the end of 1917 the number of female members in the trade-union groups referred to was 382,231, as against 255,149 at the end of 1913. The increase was therefore equivalent to about 50 per cent. In 1913 the average annual female membership formed 8.6 per cent of the total membership, while the corresponding percentage for 1917 was 22.2. Up to the end of June, 1918, the Free Trade-Unions report the largest increase in female membership, viz., an increase of 138,941, equivalent to 62.1 per cent. Membership figures for the entire year 1918 are not yet available for all labor organizations, but the figures so far published by individual federations indicate that during the last year of the war labor unions experienced a further rapid increase in their membership in general and in their female membership in particular. Thus, the Factory Workers' Federation, which is affiliated with the Free Trade-Unions and is chiefly recruited from the ranks of unskilled labor, has doubled its female membership during 1918. At the end of that year it had 88,319 female members, who formed 37 per cent of the total membership. It is a noteworthy fact that 42,211 female workers enrolled as members of this federation during the last quarter of 1918. The extent of the female membership in the most important federations of the largest trade-union organization, the Free Trade-Unions (*Freie Gewerkschaften*), at the end of 1917 as compared with the end of 1913, is shown in the following table.

¹ *Reichs-Arbeitsblatt*. Berlin, Feb. 24, 1919, pp. 149ff.

¹ Reichs-Arbeitsblatt, Berlin, Feb. 24, 1919, p. 151.

Granting that the actual number of organized woman workers seems small in view of the extraordinary increase of employment of women during the war, and although the gain in female membership does not by any means offset the great falling off of the male membership of German labor organizations, the increase of the female membership up to the end of 1917 by 50 per cent is nevertheless noteworthy. It may, moreover, confidently be expected that when the official membership figures of German labor organizations for 1918 are published they will show a further considerable increase in the percentage of female membership. Up to the end of 1917, the trade-unions covering occupations for which there was great demand in war industries show the largest increases in female membership, which go far beyond the average increase. In the Federation of Metal Workers of the Free Trade-Unions, for instance, the female membership at the end of 1917 was 83,266 as compared with 27,373 at the end of 1913, an increase of 204.5 per cent.

Another fact worthy of mention is the increased participation of woman workers in strikes and lockouts. In labor disputes initiated by the metal workers' federation, for example, the participation of woman workers rose from 2,663 (4.6 per cent) in 1914 to 470,460

(29.8 per cent) in 1917. In those initiated by the German Wood Workers' Federation, 1838 (7.4 per cent) female workers participated in 1914, and 38,650 (24.8 per cent) in 1917. It must, however, be admitted, that of the latter number only 17,791, or 46.1 per cent, were organized.

That organization of woman workers has lagged far behind that of their male fellow workers may be attributed chiefly to the unresponsive attitude of the former toward efforts at organization, above all to the lack of understanding and interest for trade-unionism of the majority of the women who are doubly burdened by occupational work and their household duties, and, secondly, to the fact that most women look upon industrial employment as a mere transitory stage in their lives. The reasons which cause the trade-unions to put obstacles in the way of extensive organization of woman labor are much harder to analyze. They may be due to the inward attitude of the trade-unions in general and of male workers in particular to the problem of woman labor. In a series of articles in *Sozialistische Monatshefte* dealing with the problems of industrial woman labor, Max Quarek, a member of the Reichstag, attributes the small success of the efforts for organizing woman labor to the fact that the trade-unions do not give sufficient consideration to the interests of woman workers, and that the male workers show little understanding of their fellow workers of the other sex and frequently assume even a hostile attitude toward them. These imputations of Quarek were emphatically repudiated in the same journal by a number of prominent trade-union leaders. But the perusal of some of the articles written in defense of the trade-union point of view makes it evident that although the trade-unions can not be accused of consciously neglecting the interests of woman workers, male organized labor looks with disfavor upon the extension of woman labor and above all upon the branching out of women into fields of industrial labor hitherto considered the exclusive domain of male workers. They either fear that an influx of female labor will overcrowd the labor market and lower wages or that certain occupations will prove injurious to women, or consider it undesirable from the point of view of the working classes that an increasing number of women who have to attend to household duties should seek industrial employment.

To-day there are only very few trade-unions which on principle disapprove of industrial employment of women and consequently do not look favorably on organization of woman workers. But their attitude is due to reasons inherent in the nature of their trade. Thus, the Federation of Building Trades Workers, which in the summer of 1916 made an investigation into the extent, nature, and wages of

woman labor, resolved not to organize woman workers employed in their trades during the war. This resolution was based on the assertion that work in the building trades is unsuited for women; that, therefore, the endeavor should be made to dispense with woman labor as soon as possible; and that nothing should be undertaken that could be looked upon as promotion or approval of such labor. A like disapproving attitude toward woman labor has always been manifested by the miners' organizations of Germany. Although during the war they have allowed women to be employed in work above ground, they are advocating complete prohibition of the employment of women in mining. The number of organized women in mining has therefore remained insignificant even during the war. The nonmilitant waiters' organizations are on principle opposed to permitting women to join their unions because they see competition by unmoral means in the employment of barmaids and waitresses. It is, however, obvious that the apprehensions quoted here, which are justified to a great extent, and are by no means inspired by narrow-minded trade jealousy, are liable to produce discord within the trade-unions with respect to their attitude toward the problem of woman labor and thus check their zeal in promoting the interests of woman workers. But even if this should not hold good in so far as the directorates of the trade-unions are concerned, it can not be denied that the unfriendly attitude of her male fellow workers has kept many a woman worker from joining a labor organization.

A number of trade-unions have acknowledged the growing importance of woman labor by developing their benevolent institutions—above all, through the introduction of maternity insurance. As propaganda among working women for the idea of organization the Central Federation of the Free Trade-Unions since 1916 publishes a women's trade-union journal (*Gewerkschaftliche Frauenzeitung*) and several federations issue women's supplements to their journals.

The future of the organization of woman workers naturally is closely connected with the development of woman labor, which can not be surveyed to-day. At the present time there is a marked retrograde movement of woman labor, owing to extensive dismissals of woman workers in war industries and the general stoppage of production due to lack of raw materials and fuel. One must, however, reckon with the fact that in the future the pressure of economic conditions will force many more women than before the war to seek gainful employment in industry. Whether labor organizations will succeed in gaining and holding these women as members can not be predicted. A further development of the benevolent institutions of the trade-unions, with a view to the special interests of female mem-

bers, especially the general introduction of maternity insurance, as proposed by Paul Umbreit, would certainly attract a larger number of women to the trade-unions. In any case it may be assumed that the strong participation of woman workers during the war in wage movements has had the result also that a great many of the unorganized woman workers have become familiar with the nature of trade-union action. Therefore, it may be confidently expected that in the future women will be more inclined than formerly to active participation in labor disputes,

STRIKES.

The Australian Shipping Strike.

ACCORDING to an article in a recent periodical,¹ the Australian shipping strike, which was finally settled the last of September, 1919, was of interest for two reasons: It was a fair indication of the existing state of industrial feeling in Australia and furnished a more or less accurate gauge of the influence of revolutionary ideas. To these may also be added the effect of the manner in which the whole matter was handled.

The strike arose from a demand on the part of the Seamen's Union for higher wages and improved working conditions. In December, 1918, after a long and expensive contest, the seamen secured a monthly wage of £12 5s.² as against £11, which they had been receiving. The men were dissatisfied with the award, especially in view of the fact that the cost of living continued to rise, as did also the profits of shipping owners, which in a majority of cases show an increase of 80 per cent since 1914.

In April, 1919, the seamen made a new demand, the main provisions of which were: "An able-bodied seaman to receive £14 a month, with equivalent pay to other ranks; a 6-hour day in port; accommodation on the ship to be improved to a standard embodied in the Commonwealth Navigation Act but not yet brought into force; menu to be improved in accordance with the standard adopted for the Navy; overtime for trimming coal and working cargo; insurance guaranty of £500 to be paid to next of kin of seamen dying at sea."

This demand was in reality an appeal against the previous award, a proceeding in opposition to a recent ruling by the Australian arbitration court, which provided that an award of the court could not be altered during the period for which it was made. The direct actionists in the labor ranks desired to break the arbitration system, and the secretary of the Australian Seamen's Union, Mr. Thomas Walsh, decided to call out the men to make a test case of the jurisdiction of the court.

¹ The New Statesman, London, Dec. 20, 1919, pp. 343, 344.

² Owing to the fluctuations in the value of English money conversions are not made into American money. Normally the par value of the British pound sterling is \$4.87 and of the shilling 24.3 cents.

The public, while generally sympathetic with the seamen in their demands for better working conditions, was as generally determined that they should not ruin the arbitration system to secure them.

The Federal Government, which acted for the defense because the shipping was still controlled by the Navy Department for war purposes, in order to vindicate the arbitration system refused any concessions to the men except through the arbitration court after evidence had been taken. So, as the writer of the article points out, a situation was created in which "the strike leaders, inspired by the theory of direct action, refused to have anything to do with arbitration. The authorities, inspired by the theory of arbitration, refused to listen to any terms which had not been awarded by a court." And he adds the opinion that "if each party had not been possessed by its own theory, the strike might have been avoided. * * * It took 14 weeks of bitter experience to exorcise these theories."

From May 19 to August 26 a complete tie-up of State shipping existed. Industry was crippled. In Victoria alone 25,000 men were out of employment and in the whole of Australia 400,000 persons suffered directly from the strike. The loss in wages approximated £3,500,000. Distress was relieved by the trade-unions, by the Government, and by charitable organizations.

During all this time no attempt was made by either the Government or the shipowners to man the ships. With the exception of a few extremists led by Mr. Walsh, secretary of the Seamen's Union, the behavior of the men was exemplary. Only when, after several unsuccessful attempts at settlement, Mr. Walsh threatened to deprive the people of fuel and light, did the Government fine and imprison him. Notwithstanding the fact that his followers made a claim for his release in each attempt to settle, there seems to have been no definite effort on their part to effect it, and he was not released until the final terms of settlement had been agreed upon.

The passivity of the Government, while criticized in some quarters, was, in the opinion of the writer, on the whole successful. The burden of the strike falling on the workers, they realized the consequences of it and the futility of the policy of direct action. They did not at any time sympathize with the attempt to destroy their arbitration system. One of the outstanding features of the strike was the attempts on the part of the official representatives of organized labor to settle it.

Finally the men agreed to return to work and to confer with the owners regarding a settlement, the terms to be filed as an award of the arbitration court. After a month of conferences between the seamen and the ship owners the following agreement was published:

- (a) All ratings to have an increase of wages of 35s. per month.
- (b) The day's work to consist of 8 hours.

(c) The men to be granted home leave in port, with a flat rate of 2s. 6 d. for overtime.

(d) Wages to be paid during illness not caused by willful neglect.

(e) Each man to have 14 days' holiday each year on full pay.

(f) Meal hours to be fixed and accommodation provided according to the Commonwealth Navigation Act where practicable, and the benefits of the Workers' Compensation Act to be made available to seamen.

In summing up the situation the writer says:

The strike undoubtedly marks a definite step in the history of the labor movement. Direct action has been put into operation with discouraging results, and the revolutionary element in the country has been shown to be extremely small. While the workers stand together there will always be a powerful influence within the party toward constitutional measures. This constitutional section was kept alive by the Government policy of passive resistance. A call for volunteers would have been interpreted as a challenge to unionism and would have given the revolutionary his chance. On the other hand, no substantial breach has been made in the arbitration system, and it is clear that a very considerable majority of the workers appreciate the benefits which it has brought to them. While they probably feel that the influences dominating the mind of the judges and officials of the court are middle-class, yet they realize that a definite attempt has been made to introduce the factor of justice into the wage bargain.

IMMIGRATION.

Immigration in November, 1919.

THE following tables, prepared by the Bureau of Immigration of the Department of Labor, show the total number of immigrant aliens admitted into the United States in each month from January, 1913, to November, 1919, and the numbers admitted in each fiscal year, 1915 to 1919, and in November, 1919, by nationality.

IMMIGRANT ALIENS ADMITTED INTO THE UNITED STATES IN SPECIFIED MONTHS
JANUARY, 1913, TO NOVEMBER, 1919.

Month.	1913	1914	1915	1916	1917	1918	1919

Publications Relating to Labor.

Official—United States.

CALIFORNIA.—*Industrial Accident Commission. Report. July 1, 1918, to June 30, 1919. Sacramento, 1919. 167 pp.*

A brief summary of this report is given on pages 218 to 221 of this issue of the MONTHLY LABOR REVIEW.

MASSACHUSETTS.—*Bank Commissioner. Annual report, 1918. Part II relating to cooperative banks, savings and loan associations, and credit unions. Boston, 1919. 383, liv pp. Public document No. 8.*

On October 31, 1918, 186 cooperative banks were in operation and the aggregate of their assets was \$140,201,033.98, which was an increase of \$13,628,865.02 during the year, the largest increase in any one year since the inception of the cooperative bank system in 1877.

—*Bureau of Statistics. Ninth annual report on union scale of wages and hours of labor in Massachusetts, 1918. Boston, October 1, 1919. 141 pp. Labor Bulletin No. 128 (being Part II of the annual report on the statistics of labor for 1919).*

The data for this report were obtained principally as of July 1, 1918, when the schedules of inquiry were sent to most of the local trade-unions in the State whose members were known to be working under a time-rate system. As used in this report, the term "time-rates of wages" signifies the wages agreed upon in return for services for a specified period, and should not be confused with actual earnings since the earnings of employees depend both upon the rates of wages and the number of hours, etc., for which payment is made. It is explained that except where otherwise noted this report has reference only to the minimum rates of wages and maximum number of hours which have become effective in the various organized trades, and does not purport to show the extent to which there may be individual variations from the established scale. The rates of wages and hours of labor in this report are grouped by trades, occupations and municipalities.

—*Homestead Commission. Sixth annual report, 1918. Boston, 1919. 29 pp. Public Document No. 103.*

This report is a continuation of that of 1917, which is noted on page 316 of the January, 1919, issue of the MONTHLY LABOR REVIEW. It gives an account of the progress which has been made in the experiment commenced at Lowell of building houses, at an estimated cost of from \$1,952.85 to \$2,381.65, which could be sold to workers on easy terms at from \$2,400 to \$3,100. The experiment has been made on a parcel of 7 acres of land which was divided into 47 building lots. The first appropriation—of \$50,000—has purchased the land and built 12 houses, which, with two exceptions, were sold before the contractor had turned them over to the commission. The remaining two were sold very shortly afterwards. Two more houses were very near completion, which would exhaust the appropriation. To complete the experiment the commission recommends bills providing for another appropriation of \$100,000 with which to build 33 more houses, and the employment of a permanent secretary on salary. The report also discusses the importance of proper housing, saying that "no man

who has not at least some minimum standard of decency realized in his own home can make the type of citizen we want and need." and states that it is not "as a commission favorable to government ownership of houses, whether State or municipal, at this time." It also contains brief reports of the city and town planning board.

NEW YORK.—*Industrial Commission. Annual report for the 12 months ended June 30, 1918. Albany, 1919. 261 pp. Legislative document No. 12.*

The 1917-18 report of the bureau of workmen's compensation, which constitutes Part II of this report, is reviewed on pages 221 to 223 of this issue of the MONTHLY LABOR REVIEW.

PANAMA CANAL.—*Governor. Annual report for the fiscal year ended June 30, 1919. Washington, 1919. 366 pp.*

This volume contains the general administrative report and the reports of the various departments of the Canal Zone. The sections of special interest to labor deal with labor conditions, statistics of employment, housing, wage adjustments, and wages of West Indian employees (commonly known as "Employees on the silver roll"). Two tables give silver employees' wages, 1906 to June 18, 1919. The chief health officer submits tables of sickness and death statistics. It is stated that on June 30, 1919, the total force employed by the Panama Canal and the Panama Railroad Co. on the Isthmus was 20,361, as compared with 19,265 on June 30, 1918.

PENNSYLVANIA.—*Health Insurance Commission. Report to the General Assembly of the Commonwealth of Pennsylvania. Harrisburg, January, 1919. 246 pp.*

A digest of this report was published in the July, 1919, issue of the MONTHLY LABOR REVIEW, pages 220 to 226.

VIRGINIA.—*Bureau of Labor and Industrial Statistics. Twenty-second annual report, 1919. Richmond, 1919. 48 pp.*

Presents the results of an investigation of the wages and hours of labor of women wage earners in the mercantile establishments of Virginia. The investigation covered department stores (including 5-and-10-cent stores, 25-cent stores, etc.), and dry goods and millinery establishments, and was confined to four cities, viz, Richmond, Norfolk, Lynchburg, and Roanoke. The figures are for December 31, 1918, but will probably hold good for the year 1919, as there has been no material change in wages in these establishments during that year.

Out of a total of 2,468 persons employed in 138 establishments, covered by the investigation, 1,257, or more than 50 per cent, receive less than \$12 per week; 718, or nearly 30 per cent, receive less than \$10 per week; 223 receive less than \$8 per week, and 19 receive under \$3 per week.

Although there are a large number of mines and quarries outside of the coal industry, the inspection of the mines in Virginia is confined exclusively to the coal mines. For the year ending September 30, 1919, there were 403 inspections made, covering 247 mines, and 5 prosecutions were instituted for violations of State mine law. For the same period 945 coal-mine accidents were reported. Of these 235 were caused by fall of roof (coal, slate, rock, etc.), 19 being fatal, and 216 nonfatal; 321 were caused by mine cars and locomotives, 9 being fatal, and 312 nonfatal.

UNITED STATES.—*Congress. Senate. Committee on manufactures. Shortage of coal. Hearings pursuant to S. Res. 163, a resolution directing the committee on manufactures to investigate the causes of the shortage of coal and sugar. Washington, 1918. 1788 pp. (3 vols.) 65th Congress, 2d session.*

UNITED STATES.—*Congress. Senate. Committee on the District of Columbia. High cost of living in the District of Columbia. Report. [Pursuant to S. Res. 150.] Washington, December 8, 1919. 32 pp. Report No. 327. 66th Congress, 2d session.*

— *Council of National Defense. Third annual report, for the fiscal year ended June 30, 1919. Washington, 1919. 160 pp. Charts.*

Includes sections describing the work of the committee on labor, the States councils section, and the reconstruction research division. Among the important activities of the committee on labor was the maintenance of existing safeguards for the conservation and welfare of the workers and the formation of the emergency employment committee for soldiers and sailors to aid discharged soldiers and sailors to secure employment upon their return to civil life. The latter work was undertaken in cooperation with the United States Employment Service.

The report presents in detail the work accomplished by the Reconstruction Research Division, and states that "there are in the files of this division more coherent and dynamic material dealing with reconstruction and readjustment matters in this and foreign countries than is elsewhere to be found in the United States." The States councils section reports that as a result of its efforts to solve the housing problem in congested localities, in so far as it did not necessitate the actual construction of houses, 111 local committees were at work on the housing problems of 24 States and 65 homes registration services were in operation. These committees dealt, among other things, with complaints of rent profiteering. It is stated that through the instrumentality of these committees housing conditions in crowded centers of war industry were considerably alleviated. In an appendix is given an analysis of the duties and functions of the council.

— *Department of Commerce. Bureau of the Census. Birth statistics for the birth registration area of the United States. 1917. Third annual report. Washington, 1919. 299 pp.*

— *Department of the Interior. Bureau of Education. Bibliography of home economics. Washington, 1919. 103 pp. Bulletin No. 46.*

— — — *Educational work of the Young Men's Christian Associations, 1916-1918, by William Orr. Washington, 1919. 60 pp. Bulletin No. 53.*

According to this account of the educational activities of the Young Men's Christian Association, the educational work originated in the apparent need of it among the boys and men who came under the observation of the various secretaries. It has been the aim of this educational service "to furnish and to make easily accessible to men and boys, mainly those in industry, such courses of instruction as would enable them to become better citizens and workmen." While both general and vocational training are given, emphasis is laid upon vocational instruction and the work is such as supplements rather than supplants the work offered by the public schools along these lines.

The field of instruction is wide, including city associations, railroad branches, county work, Army and Navy branches, colored work, boys' classes, and an industrial department, in the United States, and a foreign department which has charge of the educational classes in foreign countries. A large part of the report is given to an interesting account of the educational work of the Y. M. C. A. among the forces both at home and abroad during the war.

The importance of the industrial department has greatly increased during the war due to the concentration of large numbers of workers in the industrial centers. The association has striven to foster better relations between employers and employed by means of reading courses, discussion groups, and lectures, and to provide instruction in English and civics for immigrants. The

report shows that "53 city associations have 63 secretaries giving full time to organized industrial extension work"; 4,500 volunteers serve regularly as teachers and leaders of industrial workers; 9 secretaries are working with immigrants in ports of landing and in depots; and in addition, there are 132 buildings with 187 secretaries operating in single industries and groups of industries as follows:

Industry.	Buildings.	Secretaries.
Coal.....	35	46
Lumber.....	19	22
Cotton.....	19	26
Metal mining.....	16	18
Iron and steel.....	12	25
Shipbuilding and munition plants.....	31	50

Over 200,000 industrial workers belong to the association and are thus able to take advantage of the educational opportunities offered at the various Y. M. C. A. buildings, while 5,000,000 industrial workers are reached through the association extension work. More than 60,000 industrial workers receive instruction in English and civics every year, and approximately 1,000,000 are reached by educational lectures. Special mention may be made of the work being done by the industrial service movement of the association in enlisting the services of young prospective business men as volunteers in the work among foreigners. Through contact with workers in these classes they come to have a more sympathetic understanding of foreigners and of the human side of industry generally, which is of great practical advantage when they enter industrial life later.

UNITED STATES.—*Department of the Interior. Bureau of Mines. Experiment stations of the Bureau of Mines. Washington, 1919. 106 pp. Bulletin 175.*

Account of the work of the experiment stations of the Bureau of Mines, the purpose of which is to investigate economy, efficiency, and safety in mining, and to make public the results of the investigations. The stations also serve an educational purpose by making easily accessible to both miners and operators a knowledge of the work being done by the Government in increasing production and making mining a safe occupation. During the fiscal year ended June 30, 1918, 38 mine accidents were investigated, 30 in coal and 8 in metal mines.

—*Department of Justice. Annual report of the Attorney General of the United States for the year 1919. Washington, 1919. 647 pp.*

The report, which is for the year ending June 30, 1919, refers to a decision by the Supreme Court in a case involving a definition of the words "time of employment" as used in a statute (act of June 25, 1910, 36 Stat. 423) which denies to inventors compensation for the use by the United States of patented articles, where the invention was perfected during the time of the employment of the inventor in the service of the Government, it being held that the fact that the invention was completed in hours when the inventor was not actually on Government duty was immaterial.

Proceeding under the anti-trust statutes, the Department procured the conviction of so-called business agents of Chicago labor unions on the charge of combining and conspiring to interfere with interstate commerce by preventing the unloading in Chicago of goods shipped from other States. Other cases under this head affected manufacturers and dealers, one resulting in the disso-

lution of the Corn Products Refining Co. Another case in which conviction was secured involved dealers in tile, etc., who formed an association of restricted membership and then used threats against manufacturers who sold to non-members, an agreement also being entered into with the Tile Layers' Union under which the latter were to set tiles only for members of the association. Prosecution in a number of cases was delayed on account of unsettled conditions due to the war.

Some account is given of the activities of the Department of Justice in its efforts to reduce the high cost of living. The value of additional legislation enacted in 1919 is pointed out, which makes it "now possible to deal vigorously with all cases of profiteering." Prosecutions for hoarding are also possible, and the report enumerates seizures of commodities in 18 States.

UNITED STATES.—*Department of Labor. Seventh annual report of the Secretary of Labor for the fiscal year ended June 30, 1919. Washington, 1919. 304 pp.*

This report includes accounts of the International Labor Conference and the National Industrial Conference; of the war labor administration and of the various bureaus of the department; also departmental recommendations concerning the following matters: Early legislation with a view to reviving and continuing the activities of the working conditions service; an amendment to existing statutes by which greater elasticity might be secured through temporary administrative assignments for the relief of embarrassing situations which arise through the increase of departmental work; the establishment of a system of old-age retirement for Government employees; the enactment of legislation to permit the continuation of the work of the United States Training Service in training wage earners; an increase from \$4 to \$6 per diem for subsistence for employees of the department engaged in travel; and legislation looking toward the creation of new opportunities for employment by a more adequate use of the land and of natural resources.

— *Federal Board for Vocational Education. Third annual report. 1919. Washington, 1919. Vol. I.—Vocational education. Vol. II.—Vocational rehabilitation.*

As indicated above this report consists of two volumes, the first dealing with the general subject of vocational education, the second treating specially of vocational rehabilitation. Part I of the general presentation of vocational education includes a discussion of the progress and needs of vocational education, in which are included national needs, agricultural education, home economics, commercial, industrial, and trade education, together with an account of the present status of trade and industrial education for girls and women, employment management, and a list of publications issued by the board since June 30, 1918. Part II is a summary of the progress of vocational education by States, while Part III is a statistical report of the administration of the Federal Vocational Education Act for the year ending June 30, 1919.

Volume II of the report gives an account of the vocational rehabilitation work done by the board, including a summarization of the original act and the changes effected by the act of July 11, 1919. The systems of training are described in some detail and are accompanied by a statistical report compiled from weekly reports of the district vocational offices to the central office.

— *Industrial Conference. Preliminary statement of the industrial conference called by the President. Washington, 1919. 12 pp.*

This preliminary statement was published in full in the January, 1920, issue of the MONTHLY LABOR REVIEW, pages 60 to 68.

UNITED STATES.—*Interstate Commerce Commission. Thirty-third annual report. Washington, December 1, 1919. 173, vi pp.*

A summary of casualties reported by the bureau of safety shows that during the calendar year of 1918 the total number of persons killed in connection with the operation of trains was 8,697, and of injured, 64,144, divided as follows: Trespassers, 3,255 killed, 2,805 injured; employees, 2,928 killed, 47,556 injured; passengers, 471 killed, 7,316 injured; persons carried under contract, such as mail clerks, Pullman conductors, etc., 48 killed, 766 injured; other nontrespassers, 1,995 killed, 5,701 injured. In addition, there were 589 killed and 110,431 injured in nontrain accidents. As compared with the figures for 1917 there was a decrease of 2 in the number killed and 176 in the number injured in train accidents and an increase of 39 killed and a decrease of 1,851 injured in nontrain accidents.

— *National Research Council. Third annual report. 1918. Washington, 1919. 74 pp.*

The council was established in 1916 under the charter of the National Academy of Sciences. It acts as the department of science and research of the Council of National Defense. Its chief work since the signing of the armistice has been to utilize the various preliminary studies made during the war period for the formulation of a definitive scheme of organization and a plan of work in keeping with the demands of existing conditions. Besides its war activities, the report treats matters of interest in the progress of the council during the past year, among which are the development of the work of the research information service, the organization of the International Research Council, the work of the industrial section, and the preparation of a plan of permanent organization.

— *Shipping Board. Third annual report for the year ended June 30, 1919. Washington, 1919. 213 pp.*

Includes an account of the work of the industrial relations division of the Emergency Fleet Corporation, describing the labor adjustment policy, education and training work, provision for health and sanitation, and efforts along the line of safety engineering. The last section reports a total of \$2,800,000 in wages saved due to prevention of minor accidents, and a total of \$1,000,000 insurance premiums returned because of safety organization. A table giving the number of shipyard employees by months from January, 1918, to June, 1919, shows a total of 310,559 working on ship construction in November, 1918, when the highest number was employed.

— *Treasury Department. Federal Farm Loan Bureau. The Federal farm loan act, with amendment approved January 18, 1918. Washington. August, 1919. 29 pp. Circular No. 4. (Revised.)*

Official—Foreign Countries.

ARGENTINA.—*Departamento Nacional del Trabajo. Ministerio del Interior. Anuario Estadístico 1917. Buenos Aires, 1919. 269 pp. Boletín No. 42.*

This is the regular annual report of the Labor Department of Argentina, and contains statistical and descriptive data relative to wages, hours of labor, strikes, home work, prices, collective insurance, etc., for the year 1917, and in some cases comparative data covering the period 1907-1917.

There has been a slight reduction in daily wages earned, data collected showing that from 1914 to 1917 wages of males in Argentine money fell from \$3.81 to \$3.70, and of females from \$2.38 to \$2.26. (The Argentine gold dollar is equivalent to 96.5 cents in U. S. money; the value of a dollar in currency

(*moneda nacional*) varies, but is approximately one-half gold value.) Monthly wages, however, increased in 1917 as compared with 1916, and changes in these, both sexes considered, have been quite favorable to this class of employees. In 1916 these wages reduced to a daily basis indicated that men so employed received 29.2 per cent, and women 50.8 per cent less wages than day laborers, and in 1917 men so employed received only 8.6 per cent less, while women received 3.5 per cent more than day laborers. Monthly wages of men, when reduced to a daily basis, increased 30.5 and those of women 109 per cent in 1917 over 1916. There has been but slight change in the hours of labor from 1914 to 1917, the average hours of work for each of the four years being, respectively, 8.42, 8.58, 8.56, and 8.46 per day.

There were 138 strikes in the capital, involving 136,062 persons. Of these 16 were general strikes. The loss in wages is estimated at \$8,152,631 (Argentine money). Railroad employees to the number of 66,906 were on strike, the wage loss being estimated at \$5,172,526.

A preliminary report for 1918 shows that there were 196 strikes, involving 133,042 persons, in the capital.

AUSTRALIA. *Department of the Treasury. Pensions and maternity allowance office. Invalid and old-age pensions. Statement for the 12 months ended 30th June, 1919. Melbourne, 1919. 10 pp.*

Under the provisions of the Invalid and Old-Age Pensions Act, 1908-1917, there were, on June 30, 1919, 95,969 persons (38,261 men and 57,708 women) receiving old-age pensions, and 31,999 persons (15,144 men and 16,855 women) receiving invalid pensions, a total of 127,968. These figures represent an increase of 582 and 2,087, respectively, over the preceding year. Of the old-age pensions, 9,250, and of the invalid pensions, 5,099, were granted during the year ending June 30, 1919. On account of these pensions payments of £3,880,865 (the normal value of the English pound is \$4.8665) were made, an increase of £126,888 over 1918. In addition, £55,750 were paid to benevolent asylums for maintenance of pensioners, making a total payment of £3,936,615, an increase over 1918 of £143,578. It is stated that the average fortnightly rate of pensions, which for both classes is fixed at a maximum of 25 shillings, was £1 4s. 1.18d. for old age, and £1 4s. 6.06d. for invalidity, a combined average of £1 4s. 2.4d. Approximately 85 per cent of the old-age pensioners, and 93 per cent of the invalid pensioners received the maximum allowance. The cost of administration for the year is given as £63,280, an increase of £8,925 over 1918. It is shown that since the old-age pension act came into effect on July 1, 1909, 174,282 claims for pensions have been granted. The invalid-pension act became operative on December 15, 1910, since which time 47,554 claims have been granted. Old-age pensions may be granted to persons over 60 years of age, except that men between 60 and 65 years are not eligible unless they are permanently incapacitated for work. That portion of the act which authorizes payment to women on attaining the age of 60 years came into operation on December 15, 1910.

— *Pensions and maternity allowance office. Maternity allowances. Statement showing number of claims granted and rejected, expenditure, and cost of administration during the 12 months ended 30th June, 1919. Melbourne, 1919. 3 pp.*

During the year allowances were granted in 124,016 cases, and rejected, for various causes, in 510 cases. The total amount paid to mothers was £620,080. (The normal value of the English pound is \$4.8665.) The cost of administration is given as £11,369, or an average of £1 16s. 8d. for each £100 of maternity allowance paid.

AUSTRALIA.—*Department of the Treasury. War pensions. Statement for the 12 months ended 30th June, 1919. Melbourne, 1919. 8 pp.*

It is shown in this report that pensions were granted in 82,938 and rejected in 12,644 cases. At the close of the period a total of 181,529 pensions were in force, of which 50,436 were in respect of deceased members of the forces. The total amount paid to pensioners was £4,828,072. (The normal value of the English pound is \$4.8665.) The average fortnightly rate of pension to incapacitated members of the forces is given as £1 10s. 0.58d., and to dependents of deceased and incapacitated members as 18s. 11.81d., the average for all pensioners being £1 3s. 4.11d. The total cost of administration was £97,788, or an average of £2 6d. for each £100 of pensions paid.

— (QUEENSLAND).—*Department of Labor. Report of the director of labor and chief inspector of factories and shops for year ended 30th June, 1919. Brisbane, 1919. 47 pp.*

Tables show that there were 3,180 registered factories employing 29,827 persons, and 5,281 stores, employing 10,587 persons. There were 89 accidents reported in the factories of Brisbane, and 229 in factories outside Brisbane. The labor exchanges report 37,930 registrations, a demand for 15,451 persons, and 13,768 placements. The female labor exchange reported 2,578 registrations, demand for 2,896, and 1,882 placements.

— (VICTORIA).—*Labor Department. Report of the chief inspector of factories and shops for the year ended 31st December, 1918. Melbourne, 1919. 30 pp. Price 1s. 3d.*

States that 7,994 factories, employing 104,242 persons, and 25,920 shops, employing 27,520 persons, were registered in 1918. A table of average weekly wages in the various trades for which special boards have been appointed shows a range of from 24s. 10d. in the underclothing trade to 86s. 2d. in the ice trade. In the trades not under special boards the range was from 17s. 9d. in the artificial flower trade to 93s. 7d. in slaughtering for export. It is stated that the wages-board determinations are in operation over only parts of Victoria and that, accordingly, there are some employees in trades for which boards have been appointed who are not affected by the determinations. The average wages of these range from 12s. 4d. in dispensaries to 82s. 9d. in brass works. There were 459 accidents, 8 of them fatal, in factories during 1918. Of the total number 356 were injuries to the hands.

BRAZIL (SÃO PAULO).—*Departamento Estadual do Trabalho. Seção de Informações. Os Accidentes no Trabalho em 1918. São Paulo, 1919. 53 pp.*

This is a detailed report of industrial accidents in the State of São Paulo, Brazil, for the year 1918, with comparative statistical data for the years 1912–1917 inclusive.

CANADA.—*National Industrial Conference. Ottawa, September 15–20, 1919. Official report of proceedings and discussions together with various memoranda relating to the conference and the report of the Royal Commission on Industrial Relations. Ottawa, 1919. Liv. 23½. 28 pp. Price, 20 cents.*

An account of the conference was published in the MONTHLY LABOR REVIEW for November, 1919, pages 51 to 62.

— (QUEBEC).—*Department of Public Works and Labor. General report, for the year ending 30th June, 1919. Quebec, 1919. 200 pp. Illustrated.*

Includes the administrative and statistical reports of the various branches of the provincial labor department; namely, factory inspection offices, provincial employment bureaus, registrar of councils of conciliation and arbitration, and the fair wages officer. Attention is called to the act amending the Quebec Industrial Establishments Act relating to children and the act providing for

the fixing of a minimum wage for women, two new laws that have become effective during the year.

The military employment bureaus reported that 8,189 soldiers without employment were registered, 4,875 were referred to positions, and 3,799 gave notice that they were placed.

CUBA.—*Secretaria de Agricultura, Comercio y Trabajo. Legislacion obrera de la Republica de Cuba. I. Leyes y disposiciones vigentes. II. Proyectos pendientes ante el congreso. Havana, 1919. 290 pp.*

A compilation of the labor laws, including decrees and regulations promulgated thereunder, in force in Cuba. Part II includes the text of proposed laws now pending in the national congress.

GREAT BRITAIN.—*Board of Education. Report of the standing joint committee representative of the county councils association, the municipal corporations association, the association of education committees and the London County Council, and of the National Union of Teachers on a provisional minimum scale of salaries for teachers in public elementary schools. London, 1919. 8 pp. Cmd. 443. Price, 1d. net.*

— *Chief medical officer. Annual report for 1918. London, 1919. 258 pp. Cmd. 420. Price, 1s, 3d. net.*

A section is devoted to the school medical service and juvenile employment, the subject being considered in two parts: The employment of school children out of school hours; and Arrangements for the physical well-being of adolescents in employment, in connection with continuation schools, joint industrial councils, industrial concerns, or juvenile unemployment centers. All of these matters now come within the provisions of the school medical service, the scope of which has been widened by the education act of 1918, whose provisions concern not only children in daily attendance at school, but also those children and young persons who are emerging from school to enter full-time industrial or other employment.

— *Board of Trade. Return "relating to the output of coal at coal mines in the United Kingdom during periods of four weeks, commencing with the period ended the 21st day of June, 1919, and to the number of persons employed at the end of those periods, in the various districts." London, 1919. 2 pp. 175-IV. Price, 1d. net.*

— *Return "relating to the weekly output of coal from coal mines in Great Britain, commencing with the week ended the 31st day of May, 1919." London, 1919. 2 pp. 176-III. Price, 1d. net.*

— *Interdepartmental Committee on Meat Supplies. Report of the committee to consider the means of securing sufficient meat supplies for the United Kingdom. London, 1919. 30 pp. Cmd. 456. Price, 3d. net.*

Volumes I and II were noted in the January, 1920, issue of the MONTHLY LABOR REVIEW, page 291, and articles dealing with the situation in the British coal industry and reports of the Coal Industry Commission were published in the following issues: May, 1919, pages 109 to 114; August, 1919, pages 78 to 86; and October, 1919, pages 23 to 30.

— *Home Office. Protection of hoists. London, 1919. 20 pp. Illustrated. Safety pamphlet No. 2. Price, 6d. net.*

— *Laws, statutes, etc. Manuals of emergency legislation. War material supplies manual. 4th edition. Revised to June 30, 1919. London, June, 1919. 253 pp. Price, 7s. 6d. net.*

Comprises an Introduction; Alphabetical table of war material supplies, subject to control, and release from control, since March 25, 1919; Defense of the

realm regulations enabling the making of war material supplies orders, as amended to June 30, 1919, with notes; War material supplies orders, in force on June 30, 1919, with notes; Priority of orders; and Appendixes giving non-ferrous metal industry act and rules; Restrictions on importation or exportation of war material supplies; Relief from liability under contracts affected by control of war material supplies; and Proof, construction and citation of war material supplies orders, and of the enabling regulations.

GREAT BRITAIN.—*Ministry of Health. Housing. Schemes submitted by local authorities and public-utility societies up to the 27th September, 1919; schemes submitted up to 31st October, 1919. London, 1919. 83, 130 pp. Cnd. 397, 446. Price, 6d., 9d net.*

The report covering the period up to October 31, 1919, states that 5,903 schemes, covering 46,290 acres, had been submitted by 1,282 local authorities and 58 public-utility societies. A total of 2,159 sites, covering 23,700 acres, were approved by the Ministry of Health. Of 1,266 schemes for layouts which were submitted, 747 were approved. It is also stated that 922 applications, covering 43,917 houses, for the approval of house plans had been received, in addition to some cases in which type plans were submitted, and that 599, providing for 31,013 houses, were approved. The cost of the land for 1,316 schemes, covering 14,693 acres, for which the price has been approved, is given as £2,799,040, an average cost per acre of £191. (The normal value of the pound is \$4.8665.) The average cost of 7,121 houses included in tenders which have been approved is £718. Of this number 3,630 are non-parlor houses, the cost of which average £660, and 3,491 are parlor houses, the cost of which average £779. Of the 7,121 houses, 6,234 were in urban districts and represent an average cost of £722, while 887 were in rural districts and show an average cost of £691. At the time of the report work was in progress on schemes which when completed will provide 20,822 houses. In addition, work was in progress on nearly 4,644 working-class houses not included in schemes under the housing act.

— — — *The housing problem in Germany. Report prepared in the Intelligence Department of the Local Government Board. London, 1919. 89 pp.*

The report deals with the conditions of housing in Germany and the measures which have been proposed for remedying existing defects. Some account is also given of the past history of housing. The facts relate mainly to the period before the revolution; but the report states that the evidence indicates that, given stability of government, the measures to be adopted will follow generally those contemplated before the change.

Two of the most instructive measures in connection with housing for the working classes in Germany in recent years have been the provision of capital through thrift institutions and the use made of public-utility societies. * * *

Another institution, the municipal-house registry, which was introduced in some towns before the war, has since been much extended because of the urgency of the housing problem. The registry is, for houses, the counterpart of the employment exchange for labor. Vacant houses or apartments are registered, and prospective tenants are furnished with information regarding them.

The report points out that the municipal-house registry is advocated not only because of the direct service to the community in providing a center where offers of, and demands for, houses, tenements, or apartments can be brought together, but also because in this way the local authority can readily keep in touch with the housing conditions of the district. It is urged that housing inspection (in which Germany has hitherto been backward) should be closely connected with the house registry.

This idea is incorporated in the Prussian housing law of 1918, by which each urban authority of size is required to establish a housing office to deal with in-

spection and other housing matters of the local authority, and while not actually required, it is contemplated that a house registry shall form part of every important housing office. * * *

The war, as here, has gravely accentuated the housing problem. House building was practically stopped. The shortage of accommodation became acute and all manner of devices were adopted in order to make it good; prohibitions (not by any means always observed) against the use of cellars and attics were withdrawn, and shops which were empty and even schools were compulsorily converted into dwelling places, all of which, however, did not more than slightly relieve the pressure.

The estimates of the number of new dwellings required differ very much, those given for the need of new dwellings for the whole Empire varying between 250,000 and 800,000, according to this report.

GREAT BRITAIN.—*Ministry of Health. Manual on the conversion of houses into flats for the working classes. London, 1919. 12 pp. 16 plans. Price, 1s. net.*

— *Ministry of Labor. Training department. For the training of apprentices whose apprenticeship has been interrupted by service in H. M. forces. Scheme No. 34. Apprentices in the iron founding and light castings industry (Scotland). Scheme No. 35. Apprentices in the sheet and plate-glass industry. [London, 1918.] 4 pp. each.*

GREAT BRITAIN.—*Treasury. Committee on housing finance. Housing finance. Interim report. London, 1919. 7 pp. Cmd. 444. Price, 1d. net.*

Appointed to consider measures to be taken to facilitate the raising of capital to carry out housing schemes, the committee now recommends—

1. Mortgage loans of local authorities to be constituted a trustee security in all cases in which the issuing authority has, under existing acts, power to issue stock ranking as a trustee security.

2. The largest authorities to continue their present system of borrowing to provide the money required for housing.

3. Power to be taken to continue the Public Authorities and Bodies (Loans) Act, 1916, which enables local authorities to borrow abroad.

4. (a) Local authorities to have power, subject to the sanction of the departments concerned, to combine for the purpose of issuing "local bonds" on the security of their joint rates and revenues; (b) consideration to be given to the question whether county councils can be empowered to raise money by the issue of "local bonds" or otherwise, and lend to local authorities for the smaller areas in the county for housing purposes.

5. The onus of finding the capital necessary for housing to remain on the local authorities.

6. (a) Local authorities to be empowered to issue, at their face value, 5½ per cent "local bonds" of the denomination of £5, £10, £20, £50, and £100, and multiples of £100 for periods of five, ten and twenty years, secured on the whole of the rates, revenues, and properties of the issuing authority, including the rents derived from the houses to be erected, supplemented by the statutory contributions of His Majesty's exchequer under the housing acts; (b) bonds to be on continuous issue; (c) terms of issue of bonds to be subject to revision at a later date.

7. Interest on "local bonds" held by small investors to be paid without deduction of income tax at the source.

8. Transfers of "local bonds" to be free of expense.

9. "Local bonds" to be constituted a trustee security.

10. "Local bonds" to be accepted at their face value, with accrued interest, in payment of the purchase price of houses sold by the local authorities.

11. An active campaign to be instituted throughout the country, with the object of securing the widest possible support of investors of all classes.

——— *Committee on old age pensions. Report and appendix to the report, including minutes of evidence. 2 parts. London, 1919. 19, 362 pp. Cmd. 410, 411. Price, 3d., 3s. net.*

BOARD OF ARBITRATION FOR THE AGREEMENTS BETWEEN THE AMALGAMATED CLOTHING WORKERS OF AMERICA AND CHICAGO CLOTHING MANUFACTURERS. *Decision of December 22, 1919.* [Chicago, 1919.] 14 pp.

The board, in this decision, granted an increase beginning December 15, 1919, and continuing to June 1, 1920, in the piece and wage rates. These increases are to be applied as follows:

An increase of 20 per cent shall be given to sections or occupations where the average earnings or wages on a 44-hour basis are \$30 or less per week, and 5 per cent to sections where the average earnings on a 44-hour basis are \$50 or more per week. An increase equivalent to \$6 per week shall be given to sections where the average earnings are from \$30 to \$49.99 per week.

An increase of 20 per cent shall be given to all week workers now receiving less than \$30 per week; an increase of \$6 per week to week workers now receiving from \$30 to \$49.99 per week; and an increase of 5 per cent to week workers now receiving \$50 or more per week.

In piecework sections, the equivalent of the increase shall be calculated and added to the existing piece rates.

It is provided that the increase shall apply to all sections and classes of labor represented by the Amalgamated Clothing Workers of America, except that inexperienced persons employed in the trade less than three months at week work are not included.

BRAINARD, ANNIE M. *Organization of public health nursing.* New York, The Macmillan Co., 1919. 144 pp.

This is the first of a series of books dealing with subjects essential to the development of public health nursing, and is indorsed by the National Organization for Public Health Nursing. A preface by Mary Sewell Gardner states that "Three elements are essential to the successful administration of public health nursing: First, the authority of Federal, State, or municipal health control; second, an informed public; third, professional workers—i. e., public health officers and public health nurses. The National Organization for Public Health Nursing includes in its membership and management these essential types." The book describes various forms of organization and sets forth principles which have been tested and found satisfactory.

BUNGE, AUGUSTO. *La inferioridad económica de los Argentinos nativos. Sus causas y remedio.* Buenos Aires, 1919. 95 pp.

This report gives the result of an investigation of the influence of unrestricted immigration in Argentina, based largely, if not entirely, on data shown in the census of the Republic of 1914. It is stated that as a result of systematic encouragement of immigration multitudes of uneducated and unskilled wage earners have come into the country, causing wages to be lowered through exaggerated competition in a limited labor market. Stress is placed upon the necessity of improving the system of general education, so that vocational training shall be fostered and developed by directing the trend of popular education toward a preparation for industrial or commercial needs, rural occupations, or domestic arts. Continuation schools and the development of individual adaptation of the pupil for a vocation are also recommended.

CARNEGIE FOUNDATION FOR THE ADVANCEMENT OF TEACHING. *Eleventh annual report of the president and of the treasurer.* New York City, October, 1916. 172 pp.

— *Twelfth annual report of the president and of the treasurer.* New York City, 1917. 154 pp.

— *Pensions for public school teachers, by Clyde Furst and I. L. Kandel.* New York City, 1918. 85 pp. Bulletin No. 12.

A report for the committee on salaries, pensions, and tenure of the National Education Association.

CLARK, NEIL M. *Common sense in labor management*. New York, Harper & Bros., 1919. 218 pp. *Bibliography*.

This book is not a discussion of the theories underlying the establishment of satisfactory relations between employers and employees, but is, on the contrary, confined largely to discussion of the practical results achieved by different companies through the various policies adopted by them toward this end. Many instances are given of successful adjustment of employee relations by means of good living and working conditions, different plans for adjusting wages, payments of bonuses, profit-sharing, and establishment of shop committees or cooperative systems. The International Harvester Co.'s industrial council plan and the wage policy of the Oneida Community (Ltd.) are appended.

DENNING, ARTHUR DU PRÉ. *Scientific factory management*. London, Nisbet & Co. (Ltd.), 1919. xii, 211 pp. *Chart*.

The faults of business organization of the past and the necessity for reorganization of industry along progressive lines are discussed by the author, who especially commends American methods and principles as voiced by the leading exponents of scientific management. In summarizing the functions of managers, foremen, and workers the statements are made that managers in the future must approach their problems in a more scientific spirit, the duties of foremen must be more carefully and logically regulated, and the workers must realize the necessity for elimination of waste effort and for increased production. The qualifications of the factory manager of the future are defined and the necessity for a definite plan of organization is shown. The appendixes include a bibliography, a statement of the most vital requirement of British industry, classification and purpose of standards, and a scientific organization chart.

DÉSPLANQUE, JEAN. *Le problème de la réduction de la durée du travail devant le Parlement Français*. Paris, 1918. viii, 558 pp. *Bibliography*.

DOOLEY, WILLIAM H. *Principles and methods of industrial education for use in teacher training classes*. Boston, Houghton Mifflin Co., 1919. 257 pp.

DUNCAN, C. S. *Commercial research. An outline of working principles*. New York, The Macmillan Co., 1919. 385 pp.

The book is devoted to the development of the author's theory that "1. The immediate and primary need of business to-day is intelligent direction and control, individually, generally; 2. Intelligent direction and control of business can be had only by a better knowledge of business principles; 3. A better knowledge of business principles can be derived only from a careful and comprehensive survey of business facts; 4. To secure a careful and comprehensive survey of business facts is a problem for business research; 5. Therefore, the immediate need of business to-day can be met only by business research."

EMPLOYERS' FEDERATION OF NEW SOUTH WALES. *Report of annual meeting, 13th November, 1919: Sydney, 1919. 35 pp.*

This report includes the annual address of the president, who discussed: Industrial problems; The International Labor Convention; and Industrial relationships. A review of the living wage inquiry of 1919 of the New South Wales Board of Trade and a summary of the conclusions of the Employers' conference on industrial relationships, held in Melbourne in 1919, called by the Central Council of Employers' Federations, are appended.

EMPLOYMENT MANAGEMENT AND SAFETY ENGINEERING. Chicago, American School of Correspondence, 1919. 7 vols. *Illustrated*.

A reading course in modern employment management and safety measures based upon a personal survey of 60 representative plants installations. The

titles of the volumes are as follows: Vol. I. Employment department organization, functions, personnel. 238 pp. Vol. II. Job analysis, labor sources, safeguarding selection, by Fred A. Krafft and Walter Stearns. 254 pp. Vol. III. Training workers, systems, policies, forms, by Fred A. Krafft. 296 pp. Vol. IV. Follow-up, labor turnover, collective bargaining. 371 pp. Vol. V. Industrial insurance, medical service, legal phases. 280 pp. Vol. VI. Safety work, accidents, engineering features, equipment, by David S. Beyer. 182 pp. Vol. VII. Mechanical guarding, special features, by David S. Beyer. 189 pp.

The course has evidently been hastily prepared, is brought together in an unsystematic and quite illogical manner, and in many of the chapters gives evidence of little or no editorial supervision. There is much repetition.

FURUSETH, ANDREW. *Second message to seamen. His relationship to the harbor workers and the shipowners. Chicago, International Seamen's Union of America, 1919. 29 pp.*

Discusses the personnel of the merchant marine and its varied requirements, the crimping system, the seamen's struggle to organize, and future duties and possibilities.

GOMPERS, SAMUEL. *Labor and the common welfare. Compiled and edited by Hayes Robbins. New York, E. P. Dutton & Co., 1919. 306 pp. Labor movements and labor problems in America.*

This volume, composed of selections from the writings and addresses of Mr. Gompers during the last 35 years, discusses certain broad general phases of the labor problem in its relation to the life of the community as a whole.

HAMILTON, WALTON HALE, EDITOR. *Current economic problems: A series of readings in the control of industrial development. Revised edition. Chicago, University of Chicago Press, 1919. 946 pp.*

A collection of expressions on various economic matters, gathered from many authors and various sources old and new, and adapted and arranged into a coherent study. The conception of economics is much the same as that which runs through the first edition of the work, but the materials now included are of more immediate value as illustrative of the problems of to-day. The theory upon which the book has been constructed is "That our society is a developing one; that the institutions which make up its structure are interdependent; that industry occupies a place of prime importance in determining its nature; that current problems rest upon the triple fact of an immutable human nature, a scheme of social arrangements based upon individualism, and a world-wide industry organized about the machine technique; that current problems represent a lack of harmony between the elements; and that conscious attention to these interrelated problems is the means through which industrial development is to be controlled." The book aims to give only a perspective of economic problems, which precedes specialized study, and to present "an outside view of questions of the day and to indicate their places in the larger universe which contains them."

HASSE, ADELAIDE R. *Index of economic material in documents of the States of the United States. Pennsylvania 1790-1904. Prepared for the Department of Economics and Sociology of the Carnegie Institution of Washington. Part I-A to E. Washington, Carnegie Institution, 1919. 810 pp.*

INTERNATIONAL INSTITUTE OF AGRICULTURE. *Bureau of Economic and Social Intelligence. International Review of Agricultural Economics (Monthly Bulletin of Economic and Social Intelligence). Year X: No. 6-7. Rome, June-July, 1919. Pp. 321-436.*

Part I is devoted to cooperation and association and contains articles on cooperation for the sale of produce in California and agricultural cooperation in Norway, besides miscellaneous information relating to cooperation and associa-

tion in various countries. Regarding agricultural cooperation in Norway, the number of cooperative societies, which in 1912-13 was 2,526, was in 1917 3,304, with a membership of 207,769, showing that about one-twelfth of the population is interested in the cooperative movement in one form or another. These societies fall into four main groups: Cooperative producing and selling societies, farmers' federations for purchase in common, farmers' cooperative selling societies, and cooperative consumers' societies. Among the latter the Union of the Cooperative Societies of Norway is included.

The article on national insurance against labor accidents in Italy shows that in 1918 the national institute issued, through the medium of its district officers, secondary offices and agencies, 33,780 new policies insuring 698,998 workmen, as against 679,736 in 1917, received 100,720 declarations of accidents, and paid 15,319,450 lire (par value of lira=19.3 cents) in benefits for 103,118 cases of accidents of which 410 were fatal and 7,422 produced permanent disablement.

JOURNAL OF INDUSTRIAL HYGIENE. Vol. 1, No. 8. New York, The Macmillan Co., December, 1919. Pp. 371-418, 119-142.

This issue is devoted to the publication of papers delivered before the health section of the National Safety Council at the Eighth Annual Safety Congress, held at Cleveland, Ohio, October 1-4, 1919. The paper by Dr. David L. Edsall on "Industrial clinics in general hospitals," was noted in the January, 1920, issue of the MONTHLY LABOR REVIEW.

Other papers in this number are on Health education in industry, by Dr. W. A. Evans; Industrial dermatoses, their sources, types, and control, by Dr. William Allen Pusey; Malingering—involving the problem of getting the sick or injured employee back to work, by Dr. Judson C. Fisher; The treatment of burns, by Dr. W. Irving Clark; and The coordination of industrial and community health activities, by Dr. C. E. Ford. The last article is reviewed on pages 201 and 202 of this issue of the MONTHLY LABOR REVIEW.

LESCOHIER, DON D. *The labor market.* New York, The Macmillan Co., 1919. xii, 338 pp.

The following note from the preface indicates the purpose of this volume: "It aims to prove the necessity for national machinery for the control of the problem of employment and to furnish information which the author hopes will be of value to employment office managers and to students of the employment and the labor problem."

LIBRARY EMPLOYEES' UNION OF GREATER NEW YORK. *Industrial democracy, 1848-1919. A study help.* [New York City, September, 1919.] 34 pp. Pamphlet No. 1.

LOPEZ, C. D. *Sociedades y Sindicatos. Contribucion a la legislacion obrera. Cuestiones sociales. Tomo 1.* Mexico City, 1918. 586 pp.

MILNES, ALFRED. *The economic foundations of reconstruction.* London, Macdonald & Evans, 1919. 226 pp.

A collection of lectures delivered before the political and economic circle of the National Liberal Club, London. The majority of the lectures were given before the cessation of hostilities, but the author says that the change in the world position has called for no alteration in the exposition of the economic principles stated. Chapters are on Payment by production; Enrichment by exchange—international trade; Foreign exchanges; The general question of free trade; Recent attacks on free trade; Economics of a league of nations—finance after the war and industry after the war—our liberties. The last two chapters concern "the vast and complicated subject of the relations be-

tween labor, capital, and the Government, in the immediate future, and in the developments of more permanent industrial organization," and devote considerable attention to the tariff, scientific management, and the work of the Whitley councils. In concluding, the author says, "We shall have to get back to our peace standard of production and spread our goods again over the whole world before we can even begin to pay our enormous debt. Far beyond that standard we must go before the payment can be completed. And there is no payment save in goods; and quantity of goods depends on our efficiency. And I claim the right to use strength of hand and dexterity of brain to the best account. My efficiency is the most precious portion of my freeman's inheritance. I submit that the product of that efficiency is my own; I have a right to exchange it with whomsoever I please. For human progress rests on exchange; to limit exchange is to limit civilization, and pro tanto to enslave mankind. For it dooms mankind to greater exertion for smaller satisfaction. It is a resultless corvée; stupid as well as wicked; a usurpation beyond the authority of any Government. Civilization has denied the right of ownership in human beings, and has declared the slave owner's title bad."

MOLEY, RAYMOND, AND COOK, HULDAH FLORENCE. *Lessons in democracy. For use in adult immigrant classes.* New York. The Macmillan Co., 1919. 197 pp.

This book aims to instruct aliens in America in the essential facts connected with citizenship and is especially planned for those of limited education and knowledge of the language. It is intended primarily for school use but can also be used by foreigners who are not in formal classes and by candidates for nationalization.

NATIONAL CHILD LABOR COMMITTEE. *Child welfare in Kentucky. An inquiry by the National Child Labor Committee for the Kentucky Child Labor Association and the State Board of Health, under the direction of Edward N. Clopper.* New York, 105 East Twenty-second Street, 1919. 322 pp. Map.

The National Child Labor Committee was invited in the spring of 1919 by the Kentucky Child Labor Association, the Louisville Welfare League, the State board of health, the Kentucky Federation of Women's Clubs, and other agencies to study conditions affecting children in Kentucky and to prepare a report of the findings. Accordingly eight agents of the committee's staff spent several months visiting typical counties in the regions known as the Mountains, Blue Grass, Beargrass, Pennyriple, and Purchase, as well as in the western mining district, along the Ohio River, and in the isolated region in the south-central division. This report covers Health, Schools, Recreation, Rural life, Child labor, and Juvenile courts. The report on Child labor, by Mrs. Loraine B. Bush concludes with a recommendation for the adoption as soon as practicable of the minimum standards for the protection and education of children recommended by the United States Children's Bureau and for the reorganization of the present bureau of agriculture, labor, and statistics and the creation of a State department of labor which will include among its activities the inspection of mines as well as the enforcement of labor laws.

NATIONAL COMMITTEE ON PRISONS AND PRISON LABOR. *The delinquent girl and woman. Proceedings of a conference, February 3, 1919.* New York, Broadway and 116th Street, 1919. 31 pp. Prison leaflets No. 58.

Includes a paper on Industrial training for women prisoners, by Mrs. Jessie D. Hodder, superintendent of the Massachusetts Reformatory for Women, based on the work of the reformatory.

NEDERLANDSCH VERBOND van Vakvereenigingen. *Verslag van de negende algemeene vergadering * * * en van de buitengewone algemeene vergadering.* [Amsterdam, 1919.] 110 pp.

Comprises the reports of the ninth regular meeting, July 18-20, 1918, and the special meeting of April 1, 1919, of the Dutch Federation of Trade-Unions.

RAWLEY, RATAN C. *Economics of the silk industry: A study in industrial organization.* London, P. S. King & Son (Ltd.). 1919. 349 pp.

The object of this book is to present the economic side of the silk industry in a connected form; that is, from the production of the cocoons to the finished fabric. The growing importance of the silk industry not only because of the demand for the product as an article of dress but for use in manufacture of surgical and electrical appliances and in many branches of warfare, with the consequent presence of international competition, makes such a study of importance. The development of silk production in the Far East is traced and the economic factors connected with the production of the raw silk and the silk manufacturing industries are discussed. Special attention is paid to the effects of foreign competition on the British silk industry for the purpose of determining the economic factors which influence success, and to the commercial organization of the raw-silk trade and the system of marketing and distribution.

ROBERTSON, JOHN. *Housing and the public health.* London, Cassell & Co. Ltd., 1919. xi, 159 pp.

In spite of the fact that only the most imperfect methods exist whereby to measure the harm done to health by bad housing, there is, in the opinion of the author, a mass of evidence already accumulated of the evil results of living under unwholesome conditions. Bad housing forms only one of a circle of vicious influences in the life of the economically depressed. Poverty, vice, drink and ignorance are all factors. But as bad housing is a factor which lends itself to concrete attack, and because its elimination would probably yield the most permanent and beneficial results, it is the most important problem for the social reformer.

Bad housing is one of the outgrowths of rapid industrial development. The author looks upon it as perhaps an inevitable result because it has arisen as a consequence of a lack of foresight and judgment. These are human failings against which it is somewhat useless to complain.

It is the purpose of the volume under review to suggest those changes in house construction, space allotment, surroundings, general layout of block and city material of construction, floor plan, and room arrangements and household conveniences, which will improve present methods of house construction. Reliance is had almost wholly upon secondary measures. The underlying land problem is wholly untouched. The local authorities and parliamentary legislation exemplified in the present housing acts of Great Britain are looked to in the solution of the problem. Manufacturers are urged to utilize the opportunities afforded by this legislation. If the improved houses are provided experience indicates that the people will respond and appreciate the improvements.

RUSSELL SAGE FOUNDATION LIBRARY. *Industrial pensions: a selected bibliography.* New York, December, 1919. 4 pp. Bulletin No. 38.

SIMPSON, KEMPER. *Price fixing and the theory of profit.* In *Quarterly Journal of Economics*. November, 1919. Cambridge, Harvard University Press. 1919. pp. 138-160.

This article discusses methods of price fixing, the theory of profit, and the relation of the latter to price fixing.

SOCIETY OF INDUSTRIAL ENGINEERS. *American and international labor conditions. Complete report of the proceedings of the fall national conference, Cleveland, Oct. 29-31, 1919. Chicago, 1919. 161 pp.*

SONNICHSEN, ALBERT. *Consumers' cooperation. New York, The Macmillan Co., 1919. xiv, 223 pp.*

A review of this book appears on pages 134 to 137 of this issue of the REVIEW.

STUDENSKY, PAUL. *The pension problem and the philosophy of contributions. New York, Bureau of Municipal Research, 1917. 20 pp.*

This pamphlet discusses the objects sought in the establishment of pension funds and the lack of actuarial soundness in most of the systems in force. The plans are divided into three classes: The wholly contributory, the noncontributory, and the partly contributory systems. The author reaches the conclusion that the partly contributory system is the one best calculated to secure success largely by reason of the fact that it does not tend to increase or decrease wages or to become "deferred pay" as is the case in one or the other of the two other systems. It also permits the establishment of a system which is financially sound, since by dividing the cost sufficient funds are created without unduly burdening either the employees or the employer, municipality, or Government.

TALBOT, FREDERICK A. *Millions from waste. Philadelphia, J. B. Lippincott Co., 1920. 308 pp.*

The purpose of this book is to "indicate certain of the most obvious channels through which wealth incalculable is being permitted to escape, as well as the narration of something concerning the highly ingenious efforts which are being made to prevent such wastage." It is intended primarily for the uninitiated reader and aims to acquaint the man in the street and the woman at home with the enormous wastage, both in finance and kind, which is incurred in the most familiar fields during the course of the year, and to persuade them to observe methods of thrift.

TODD, ARTHUR JAMES. *The scientific spirit and social work. New York, The Macmillan Co., 1919. 212 pp.*

Although the main part of this book deals with the detailed administrative methods of social workers and the problems involved in them, several chapters are devoted to restating the philosophical and psychological principles upon which the author believes sound social work is based and by which it is justified, and a little space is given to cautions to social reformers. A chapter on "Recent tendencies in social reform" gives a clear setting for the problems which at present confront the social worker and which are discussed in chapters dealing with Sentimentality and social reform, The dead center in social work, The labor turnover in social agencies, The adventurous attitude in social work, and Social progress and social work.

TRADES AND LABOR CONGRESS OF CANADA. *Report of the proceedings of the thirty-fifth annual convention held at the city of Hamilton, Ontario, September 22 to 27, 1919. Ottawa, P. M. Draper, secretary-treasurer, 1919, 234 pp.*

An account of this convention was given in the December, 1919, issue of the MONTHLY LABOR REVIEW, pages 365 to 368. *

TRADES-UNION CONGRESS. *Report of proceedings at the fifty-first annual trades-union congress held in Glasgow, September 8 to 13, 1919. London, 1919. 408 pp.*

A digest of this report is given on pages 256 to 258 of this issue of the MONTHLY LABOR REVIEW.

UNIVERSITY DEBATEES' ANNUAL. *Constructive and rebuttal speeches delivered in debates of American colleges and universities during the college year, 1918-19. Edited by Edith M. Phelps. New York, H. W. Wilson Co., 1919. 234 pp. Bibliographies.*

Two chapters are devoted to the subject of Government ownership of railroads and one treats of Federal employment for surplus labor.

WHITFORD, JAMES F. *Factory management wastes; and how to prevent them. London, Nisbet & Co. (Ltd.), 1919. x, 220 pp. 8 charts.*

This book deals with the problem of waste found in the average factory in relation to the bearing which it has on the solution of present-day labor problems. The author believes that when employers and employees realize that their interests are identical and that the elimination of preventable losses serves the interests of both "the successful solution of a difficult and complex problem is capable of attainment." The author denies that modern factory methods or scientific management are "dehumanizing" but argues that carried out to the greatest possible perfection they bring the workers not only greater material returns but increased leisure and opportunities for enjoyment. The subjects of overtime, cost finding, and wage systems, including profit sharing, are also discussed.

MONTHLY LABOR REVIEW

VOL. X—NO. 3

WASHINGTON

MARCH, 1920

Prevention of Accidents by the Statistical Method.¹

By ROYAL MEEKER, UNITED STATES COMMISSIONER OF LABOR STATISTICS

STATISTICS are commonly thought of as exceedingly dry and rather useless arrays of figures. No popular misconception is more at variance with the truth than this misconception of the nature and purpose of statistics. In the field of accident prevention safety men were unable to make much impression on the frequency of accident occurrence until accident statistics showed the causes responsible for the greater numbers of accidents.

The crude statistics of accident occurrence, which counted all accidents as equally important, whether resulting in death, the loss of an arm, or a cut on the finger, were useful in assisting the safety men to determine the causes and reduce the number of accidents. These crude statistics of accident occurrence or accident frequency were wholly inadequate for attacking the causes of the fatal and more severe accidents. The analyses by the U. S. Bureau of Labor Statistics of accidents by length of disability or severity of injury had some very important results. It was found that some industries and occupations with high accident frequency rates had low severity rates. On the other hand, industries and occupations with low frequency rates had high severity rates. It was further discovered that the fatal and more severe accidents were largely due to faulty layout of plants and faulty construction of equipment. For instance, blast furnaces formerly contributed very largely to the fatal accidents in the manufacture of iron and steel. The heavy toll of deaths due to blast-furnace accidents led to improvements in construction by which "blow-outs" with their accompanying fatalities have been almost entirely eliminated. The substitution of mechanical charging of blast furnaces for the old hand-charging method has practically eliminated fatal "gassing" among the men who were obliged to work on top of the old type of blast furnaces. These improvements in the construction of blast furnaces were brought about as the result of the analyses of accident statistics and the calling of the attention of those responsible for the direction of industry to the causes of the more severe accidents.

¹ This article was published in the National Safety News, bulletin of the National Safety Council, Chicago, Jan. 26, 1920.

It is impossible to differentiate accurately responsibility for accident occurrence. There must be the fullest cooperation between management and men if accidents are to be reduced to the irreducible minimum. Workers must be educated to be careful in doing their work. The management must be educated to be careful in laying out and building the plant and equipment to be used by the workers. The analyses of accident statistics made by the U. S. Bureau of Labor Statistics indicate that the education of the workmen may and does result in reducing very greatly the number of accidents, especially the minor ones. These studies indicate with equal precision that we must depend upon the education of employers to bring about any marked decrease in the severity of accidents. Workers can spend all their time being careful in a badly constructed or badly equipped plant and yet be killed or seriously injured by reason of unsafe railroad yards or badly designed or badly built machines and other equipment.

Need for Accurate Accident Statistics.

THE safety movement has gained tremendous impetus. The workers are being educated in the gospel of being careful not merely for their own safety but for the safety of their fellow workers. Employers are also being educated to provide safe and sane workshops and equipment for their workers to use. The great need of the hour is more accurate accident statistics and more intelligent tabulation and analysis of such statistics. Employers have gone about as far as they can go in directing the safety campaign until they can be given more information about the causes and severity of accidents in industries and occupations that have not yet been included in detailed accident studies.

The most important contribution that could be made to the further development of the safety movement would be the adoption in all the States of the Union of uniform accident reporting blanks. These blanks should call for the essential facts which safety men and factory inspectors must know to determine the causes and results of accidents. These uniform accident reports should be tabulated on the tabular forms adopted and according to the rules laid down by the Committee on Statistics and Compensation Insurance Cost of the International Association of Industrial Accident Boards and Commissions. Information regarding accident occurrence and results collected in a uniform way from all industries and plants throughout the country and tabulated in a uniform manner would be most valuable to employers, employees, and factory inspection departments. The safety movement could then be intelligently directed toward the reduction or elimination of the more severe accidents in the industries and occupations with the higher severity rates.

The campaign for the reduction of severe accidents need not at all diminish the vigor of the campaign for the reduction of minor injuries. It is important to reduce the occurrence of all accidents—minor and major—to the irreducible minimum, but the point that needs emphasis just now is the fact that it is more important to prevent the loss of the legs, the arms, and the lives of workers than to prevent the loss of the finger nails and cuticle of workers.

The men who are engaged in analyzing accident statistics by tabulating them by causes and severity of injuries are like the general staff of the army. They map out the objectives of the campaign and furnish the information necessary to attain these objectives most speedily and economically. The Safety Movement Army has now caught up with the general staff. It has attained all of the objectives that have been clearly mapped out by the statistical strategists. The imperative need of the Safety Movement Army now is for better and more detailed maps of the enemy's country and the clear indication of the objectives for the next onward movement. These maps can only be supplied by the accident statisticians when they obtain more complete and accurate accident statistics. Let the watchword be the prevention of every preventable accident. To attain this goal, accurate, complete, and comprehensible accident statistics are indispensable. Better statistics make for better safety work.

Duration of Wage Earners' Disabilities.

By BORIS EMMET, Ph. D.

A BRIEF report on the extent of disabilities among wage earners was published in the November, 1919, issue of the REVIEW.¹ The article presented herewith represents a supplementary study undertaken for the purpose of revealing the duration of disability as influenced by age and occupation. The figures are for the years 1912 to 1916, inclusive, and represent the experience of the Workmen's Sick and Death Benefit Fund of the United States of America. Disabilities resulting from accident as well as those caused by sickness are included. Members of Class III, who are entitled to receive death benefits only, are not included.

The following table shows the duration of disabilities among wage earners by presenting the proportion of cases of each specified duration and the number and per cent of disability days in each duration period.

TABLE 1.—NUMBER AND PER CENT OF CASES AND OF DAYS OF DISABILITY IN EACH SPECIFIED DURATION PERIOD.

Duration of disability.	Cases of disability.		Days of disability.	
	Number.	Per cent.	Number.	Per cent.
1 day.....	270	0.6	267	(¹)
2 days.....	1,013	2.3	1,996	0.2
3 days.....	1,586	3.7	4,707	.4
4 days.....	1,844	4.2	7,302	.6
5 days.....	2,088	4.8	10,344	.9
6 days.....	1,502	3.5	8,910	.7
Total, under 1 week...	8,303	19.1	33,526	2.8
1 week and under 2 weeks...	12,071	27.8	109,972	9.0
2 and under 4 weeks.....	10,468	24.1	195,981	16.1
4 and under 12 weeks.....	9,418	21.6	423,490	34.8
12 and under 25 weeks.....	2,269	5.2	244,316	20.1
25 weeks and over.....	956	2.2	208,841	17.2
Grand total.....	43,485	100.0	1,216,116	100.0

¹ Less than one-tenth of 1 per cent.

² This total differs somewhat from the total days of disability (1,223,324) shown in the article entitled "Disability among wage earners," which appeared in the November, 1919, issue of the MONTHLY LABOR REVIEW, Table 5, p. 26. The difference is due to the method of computation. The larger figure of the earlier report represents the actual number of disability days. The smaller figure given here was arrived at by multiplying the number in each group by the mean of the lower and higher number of days included in the group.

Table 1 shows that slightly over 19 per cent of all the cases and about 3 per cent of the total days of disability were due to disabilities of less than one week. More than 46 per cent of the cases and

¹ "Disability among wage earners," MONTHLY LABOR REVIEW, November, 1919, pp. 20-39.

about 12 per cent of the total days of disability were caused by disabilities extending less than two weeks.

The information given in Table 1 is of interest to students of State and fraternal social insurance as well as to organizations having, or proposing to have, employees' sick benefit societies. One of the two most pressing questions in all such instances is that of the waiting period. A very short waiting period, or no waiting period at all, has a definite tendency to encourage malingering. Again, too prolonged a waiting period may mean that a considerable number of disabled persons, actually in need, will be deprived of the sorely needed financial assistance. Certain of the proposed State social insurance plans provide for a waiting period of three days. The disability experience presented in Table 1 shows that a waiting period of three days would eliminate from benefit payment less than 7 per cent of the disability cases. Such an elimination would be most desirable from the point of view of guarding against malingering and would, at the same time, cause very little hardship because the proportion of disability days covered by cases of a duration of three days or less is insignificantly small, slightly over one-half of 1 per cent of all disability days.

The length of the benefit period is the second important consideration in sickness insurance. Long benefit periods mean, of course, a great financial burden. The usual length of benefit periods in many of the existing voluntary sickness insurance societies as well as in trade-union funds is about three months.¹ Table 1 shows that 7.4 per cent of all the disability cases last 12 weeks and over. These cases represent 37.3 per cent of all the disability days.

The Age Factor in Disability Durations.

TABLE 2 shows for all occupations the number and per cent of members disabled each classified number of days, by age groups.

The detailed facts presented in Table 2 are, for purposes of clearer analysis, summarized in Table 3, in 5-year age groups, and in Table 4, in 10-year age groups.

¹ See article on "Operation of establishment and trade-union disability funds," in MONTHLY REVIEW of the United States Bureau of Labor Statistics, August, 1917, pp. 22-36.

¹ The totals given in this table include all ages and therefore do not agree with the totals in Table 3.

The influence of the age factor may easily be discerned by a comparison of the figures shown in the columns headed "under 1 week," and "25 weeks and over," of Table 3. In the first instance the proportion of cases lasting under one week was 26.5 per cent in age group 25 to 29, and less than one-half of that—12.5 per cent—in the age group 55 to 59. An entirely opposite, but just as definite, tendency is found in the column showing per cent of disabilities lasting 25 weeks and over. Here the age group 25 to 29 shows 1.4 per cent compared with 3.3 per cent—or more than 100 per cent greater—for the age group 55 to 59. The combination into 10-year age groups, as given in Table 4 shows the same tendency, but in a much more striking manner. Comparing the percentage figures of the columns corresponding to those mentioned in Table 3, it is seen that the proportion of cases lasting under one week is about two-thirds less in age group 60 to 69 than in age group 20 to 29, but that the proportion of cases lasting 25 weeks and over is over three hundred per cent greater in group 60 to 69 than in group 20 to 29.

The Occupational Factor in Disability Durations.

AS STATED in the earlier report on disability among wage earners,¹ the two principal factors determining the extent of disability are age and occupation. A similar statement may be made with reference to the factors determining disability durations.

Although the age factor is most important, the effect of the occupational factor should not be underestimated. Table 5 shows occupational disability durations by giving for all ages the number and per cent disabled each classified number of weeks.

¹ See article on "Disability among wage earners," in MONTHLY LABOR REVIEW, November, 1919, p. 31.

The above table shows occupational disability irrespective of age; that is, the results presented were influenced by the age distribution factor within each occupation.

In Table 6, which follows, all occupational experience as to duration of disability is given for specific and identical 5-year age groups. By means of this table the influence of the age factor can be eliminated as explained in the earlier article¹ and the extent of occupational influence on disability durations ascertained.

TABLE 6.—NUMBER AND PER CENT DISABLED EACH CLASSIFIED NUMBER OF WEEKS, IN EACH OCCUPATIONAL GROUP, BY 5-YEAR AGE GROUPS.

Age group 25 to 29.

INDUSTRIAL RELATIONS.

British Railway Wages.¹

By N. C. ADAMS.

THE industrial situation in England was appreciably eased on January 15 by the decision of the railwaymen's representatives to accept the Government's proposals for the fixing of standard railway wages. Negotiations regarding standardization of wages began in March, 1919,² came to an abrupt halt at the time of the strike³ in September, and were resumed vigorously in October at the cessation of the strike in accordance with the terms of settlement.³ Although the Government's proposals do not by any means concede the full demands of the railwaymen, it is probable that the decision of the delegates of the National Union of Railwaymen will be ratified by the branches, as Mr. J. H. Thomas, the general secretary, and the other leaders have strenuously advised the acceptance of the present offers as being far and away better than anything yet proposed and promising to result ultimately in an approximation to the full demands.

The Government has had a highly technical and difficult task in endeavoring properly to grade railway employees, to standardize rates of pay by grades, and to fix a sliding scale dependent upon the cost of living, subject, however, to the underlying principle that standard wages are to be substantially increased over prewar rates, whatever the cost of living may be.

Course of the Negotiations.

RAILWAYMEN as a class derived scant satisfaction from the strike settlement, because of its indeterminate character. Rumors of uneasiness and of further strikes have been recurrent, therefore, since October. Officials of the Government and of the railwaymen's unions have fully recognized this state of mind and apparently have made strenuous effort to reach an early as well as an equitable settlement as to wages.

The Government through the minister of transport (Sir Eric Geddes) submitted various offers to the railwaymen's executive committee which were deliberated upon but not accepted. The *Railway Review*⁴ of December 19, 1919, announced that the execu-

⁴ Official organ of the National Union of Railwaymen.

tive committee had received further offers from the Government which in "principle" were a departure from the "national program" (straight upwards standardization) yet "might ultimately provide a basis for settlement." The executive committee, therefore, had decided to send a delegation to interview the Government again, "with a view to obtaining an improvement on the offer to the full extent to which they (the Government) are prepared to go, so that the full terms of the offer may be submitted to a special general meeting." The representatives were instructed to make it plain to the Government that the executive committee was not in a position to accept the "principle" of the new offers, but that their function would be limited to placing it before a delegate meeting (special general meeting) with a recommendation for its acceptance or otherwise.

Finally on January 4 the Government's offers were made known at meetings of railwaymen held in several important centers, but at nearly every meeting the offers were voted unsatisfactory. The Government proposed an immediate and retroactive increase of 5s.¹ per week thus increasing the stabilized minimum of the October agreement from 51s. to 56s. up to September 30, 1920, but after that date standardization in any grade was to be based upon the average rather than upon the highest rates and the guaranteed minimum in a few grades might fall to 40s. which is considerably below what the railwaymen consider a "living wage."

On January 9 the delegate conference, after three days of discussion, rejected the terms offered but remained in being to await a reply to some modifying proposals of the railwaymen. Finally on January 15 the conference by a "very narrow" majority accepted the Government's amended offer, as representing the best terms obtainable at present.

The conference returned six objections to the original offer:

1. The standard wage rates are based on the average, not the highest prewar rate in each grade. (The Government adhered to the average.)
2. The sliding scale based on the cost of living is unacceptable. (The Government considered the scale essential.)
3. Certain grades are not included. (The Government extended the 5s. advance in the war wage to all grades now receiving the war wage.)
4. Hardship would result in individual cases. (The Government agreed to deal with these cases.)
5. Any increase resulting should be retroactive as from August, 1919. (The Government agreed to grant this if the men prefer it to the offer of a general lump-sum payment of £1.)
6. The Irish railways should be included. (The Government agreed to include the Irish railways.)

¹ Normally, the par value of the shilling is 24.3 cents; of the pound sterling, \$4.8665.

It appears that the Government has agreed to a certain measure of elasticity in the detailed application of its proposals, while standing firm on principles. Whether the new terms are equitable or not this policy of the Government may have an alleviating effect. The indecision of the last year has had a disturbing effect upon industry in general, and while the public, having in mind the comparative ease with which the country "carried on" during the recent railway strike, has of late shown little concern, there is ample evidence that the rank and file of the railwaymen had become more and more disinclined to accept anything less than the full terms of their demand for standardization upwards. The railwaymen's leaders have advised the men to accept the Government's offer.

Summary of the Government's Offer.

THE Government's offers as accepted may be summarized as follows:

The average weekly rate on 15 of the largest railway companies has been taken for each grade or group of grades, and the war bonus (33s.), plus an additional 5s., added to make the new abnormal rate which will remain in existence until the end of September, 1920.

A sliding scale is to be instituted after September, 1920. Taking the present cost of living at 125 per cent above normal a rise or fall of five full points will carry an increase or decrease, as the case may be, of 1s. in the new rate of pay. The position is to be considered every three months after September, 1920, by the central wages board.¹

The normal (i. e., standard) rate of pay in each grade is to be the average as described above, plus a minimum of 100 per cent. These "normal rates" form the "stop" for the sliding scale; that is, in each grade no reduction will be made below the "stop" no matter how low the cost of living may fall. The lowest "stop" is 40s., for porters (class 2) outside London; porters, goods depot, class 2 stations; laborers, telegraph department; crossing keepers, and rural permanent-way undermen. The highest "stop" is 75s. for yard foremen (class 1).

A large number of grades have been eliminated, with the result that there will be only 88 grades in place of the 512 now existing in the departments so far dealt with.

A lump sum of £1 is to be paid each man in the grades under consideration in place of making any increase, resulting from the new terms, retroactive to August, 1919, when the drivers' and firemen's wages were standardized.

¹ See page 24.

Analysis of the New Terms.

BEFORE the September strike the Government offered to stabilize wages at their present level to the end of March, 1920, only, but by the terms of the strike settlement the period was extended through September, 1920. Now by the new terms a more real improvement has been secured by the railwaymen in the shape of an extra 5s. per week added to the war bonus, to last at least until September 30.

The sliding-scale system, which is to operate after September, is at least definite and in that respect much more favorable than the one proposed during the strike; also the positive assurance is given of a reviewing of the position every three months.

Before the strike the Government offered standardization at an average of 100 per cent above the prewar rate in each grade, but in the new offer 100 per cent is called a "minimum increase" and so far as the actual wages have been published it is exceeded in every case. Taking porters as an illustration, they are to be placed in three categories, the averages working out at 18s., 20s., and 22s., so that, with the enhanced war bonus added, wages will be 56s., 58s., and 60s., respectively, until September 30, when the sliding scale becomes operative. But the "stops" arranged are 40s., 42s., and 46s., respectively, which are 122 per cent, 110 per cent, and 109 per cent, respectively, above the prewar averages. When one considers the additional 5s. and the fact that there is a dubious prospect of the cost of living decreasing sufficiently to bring the rate of any grade down to the so-called "normal rate," it is apparent that the railwaymen have made a very considerable gain. Indeed, these new terms, taken in conjunction with the eight-hour day and the new arrangements for overtime and Sunday work, granted last year,¹ mark an advance for railway men that would have been thought beyond the bounds of possibility a very short time ago.

The unavoidable complications and delays involved in ascertaining the amounts due each man to whom increases result from the new terms, back to the time when the drivers' standard wages came into force, August, 1919, probably will cause the men to accept instead the lump-sum immediate payment of £1.

The real cause of dissatisfaction with the new offer seems to be the proposed "average" basis of the new terms in place of the "highest rate" basis demanded. But this dissatisfaction is assuaged by the Government having agreed that there shall be no reduction for those now getting prewar rates above the average, other than those reductions after September resulting from the operation of the sliding scale. This agreement should prevent cases of individual hard-

¹ See MONTHLY LABOR REVIEW, June, 1919, p. 176.

ship from arising, and in any event the new wages machinery already provided for¹ should be able to ascertain facts regarding any case and make proper adjustments. With all these advances and improvements, however, the fact remains that there are grades in which it is possible that wages may be reduced to only 40s. per week.

Details of the Government's Offer.

RATES of pay to adults in the various grades, as they stand with the newly added 5s. bonus, in force at least up to the end of September, and the standard rates, or "stops," to which employees may be reduced after September, by the application of the sliding scale, are given in the statement following. These on their face present some startling possible reductions which, if ever effected, might easily prove a disturbing factor. The possible reductions range from 18s. per week for permanent-way undermen in rural districts to 4s. per week for yard foremen (class 1). As before stated there is little chance of their taking place.

It is reported that before these terms were accepted by the delegate conference a resolution to refer the matter to the Triple Alliance¹ was introduced but not carried. The transport workers are engaged upon the dockers' demand for a 16s. raise, while the miners are occupied with their nationalization campaign, and at present neither body can afford to drop its own interests to assist the railwaymen. Moreover, it is not likely that the three unions would strike because of the slight differences at present existing between the railwaymen's demands and the Government's offers.

Proposed Participation in Management by Employees.

IN THE meantime there is a new phase of the railwaymen's situation to be considered. On November 16 Mr. Thomas, addressing a meeting of railwaymen at Bristol, announced that the Government proposed to give railwaymen a share in control of the railways by creating the following machinery:

Three union representatives to join the Railway Executive, with coequal powers to the general managers; a joint board, composed of five general managers and five representatives of the unions, to deal with conditions of service; a body of 12 (4 from the men, 4 from the railway companies, and 4 from the public, with an independent chairman) to which will be referred questions on which the joint board fails to agree; bodies set up locally (with an equal number of both management and men) to deal with grievances.

¹ See MONTHLY LABOR REVIEW, June, 1919, pp. 169-177.

The full significance of these new concessions is not yet known and on their face it does not seem that the railwaymen are actually gaining any real share in control. The outstanding fact, however, is that the Government has given full "recognition" to the railway unions, and it should be recalled that the strike of 1911 was virtually for that very object. At that time a reluctant recognition was granted, but this new offer to place union representatives on boards hitherto reserved for general managers of the railways is apparently entirely voluntary on the part of the Government. This is a very long step indeed for the railwaymen to have advanced in a little more than eight years.

Mr. Thomas's first announcement was somewhat vague in that the "railway executive," as such, was, in accordance with the Transport Act of 1919, to cease to exist January 1, 1920, and the new body has now been announced by Sir Eric Geddes as the "railway advisory committee," and includes in its personnel four union officials together with 12 railway officials. No promise has been made as to the extent to which the Ministry of Transport will act upon the advice of this committee. The four union representatives are Mr. Thomas, Mr. C. T. Cramp, industrial secretary of the National Union of Railwaymen, Mr. Bromely, secretary of the Locomotive Engineers, and Mr. A. G. Walkden, secretary of the Railway Clerks' Association, who has not been identified with labor politics, but is devoted to the administrative work of trade-unionism. These men are among the ablest of the railway unions' representatives and may be depended upon to gain for the railwaymen all the voice in control possible in the existing conditions, i. e., an advisory committee with a definite minority representation of the railwaymen, and the retention of all executive functions by the Ministry of Transport.

The joint board (five general managers and five railwaymen) to deal with conditions of service has been named the "Central wages board," and the final court (four from the railway companies, four from the employees, and four from the public, with an independent chairman) is to be known as the "National wages board." Of the four public representatives, one is to be nominated by the parliamentary committee of the Trade-Union Congress, one by the Cooperative Union, one by the Federation of British Industries, and one by the Associated Chambers of Commerce.

Modification of "Right to Strike."

SIR Eric Geddes, speaking in the House of Commons on December 9, said that the railway unions had agreed that no strike should take place until one month after the question in dispute had been referred to the National wages board. This statement would seem

to indicate that the railway unions have definitely accepted the Government's proposition in respect to these three bodies. Still, as long as the standardization negotiations remain unsettled, there is no likelihood of the wages boards functioning, as the offer specifically states that they shall not take up any questions now being negotiated. This would seem to indicate that the wages boards will not be set up till standardization has been definitely accomplished.

This renouncement of the privilege of the instantaneous strike is important. During the 1911 strike the great inconvenience suffered by the public acted as a lever to bring an early victory to the railwaymen; but in 1919 the use of motor transport so eased the situation that the strike may no longer be regarded as an irresistible weapon of the railwaymen.

Trade-unionists as a rule are averse to compulsory arbitration or to any limitation of the right to strike, hence it is not clear that the leaders, who have apparently agreed to the one month postponement, will have an easy task in obtaining the adherence of their members to this provision.

The advisory committee will, it is supposed, terminate as such in August, 1921, when, according to the Ministry of Transport Act, Government control of the railways will cease. The minister has authority, however, to increase rates, which will remain in force, if necessary, for a year and a half after the date specified, and previous compensation provisions to protect the shareholders will remain unassailed. According to the arrangement between the companies and the State, the railways must be returned to their proprietors "unimpaired in net revenue earning capacity." It is little wonder, therefore, that the Government has made a great effort to stick to its original offers, which were supposed to be all the railways could endure. The central and national wages boards, if they prove successfully workable, are likely to be continued, although their composition may be changed. From information at present available it is not known just at what point the central wages board will begin its duties and whether the adjustment of anomalies resulting from the standardization scheme will fall to its lot.

PRICES AND COST OF LIVING.

Retail Prices of Food and Coal in the United States.

RETAIL prices of food are secured by the Bureau of Labor Statistics from retail dealers in 50 cities through monthly reports of actual selling prices on the 15th of each month. These reports represent many thousands of sales to housewives in each of the 50 cities. Prices of 43 food articles¹ are now reported monthly by retail dealers, and prices of storage eggs are secured in January, February, October, November, and December. Quotations are secured on similar grades of commodities in all cities. There are, however, some local differences which must be taken into consideration when any comparison is made of the prices in the different cities.

1. The cut of beef known as "sirloin" in Boston, Mass.; Manchester, N. H.; Philadelphia, Pa.; and Providence, R. I., would be known as "porterhouse" in other cities. In these four cities, owing to the method of dividing the round from the loin, there is no cut that corresponds to "sirloin" in other cities. There is also a greater amount of trimming demanded by the trade in these cities than in others. This is particularly true of Providence, R. I.

2. In Boston, Mass.; Fall River, Mass.; Manchester, N. H.; New Haven, Conn.; Portland, Me.; and Providence, R. I., very little fresh plate beef is sold, and prices are not secured from these cities for this article.

3. The most of the sales in Newark, N. J., are on whole ham instead of the sliced, as in other cities.

There are also other local factors which should be taken into consideration. The cities for which prices are shown are widely separated; some are in localities near the source of supply while others are a greater distance from it, making it necessary to add to the prices a greater amount for transportation. Methods and costs of doing business vary greatly in different localities, due to the demands of customers, and to rentals, wages, and other fixed charges or expenses.

In addition to food prices, the following retail prices are secured from each of the 50 cities listed on page 38:

¹ Retail prices for the following 23 food articles have been secured each month since January, 1913: Sirloin steak, round steak, rib roast, chuck roast, plate beef, pork chops, bacon, ham, lamb, lard, hens, flour, corn meal, eggs, butter, milk, bread, potatoes, sugar, cheese, rice, coffee, and tea.

In addition to these 23 articles, monthly prices have been secured for the following 5 articles since January, 1915: Canned salmon, navy beans, onions, prunes, and raisins.

Monthly retail prices have been secured since January, 1919, for the following 15 articles: Evaporated milk, oleomargarine, nut margarine, Crisco, rolled oats, corn flakes, Cream of Wheat, macaroni, cabbage, baked beans, canned corn, canned peas, canned tomatoes, bananas, and oranges.

Prices for storage eggs have been secured for January, February, November, and December only of each year including 1919, when prices were also secured for October.

(a) Prices of coal are secured semiannually, and published in the March and September issues of the MONTHLY LABOR REVIEW.

(b) Prices of gas are secured annually and published in the June issue of the MONTHLY LABOR REVIEW.

(c) Prices of dry goods are secured quarterly and published in the April, July, October, and December issues of the MONTHLY LABOR REVIEW.

Retail prices of food for January 15, 1920, show that the cost of 22 articles of food was 2 per cent higher than in December 15, 1919, 9 per cent higher than in January, 1919, and 104 per cent higher than in January, 1913. These comparisons are based on actual retail prices of 22 of the most essential foods,¹ weighted according to the consumption of the average family.

During the month from December 15, 1919, to January 15, 1920, 29 of the 44 articles of food for which prices were secured in 1919 increased as follows: Cabbage, 33 per cent; potatoes, 26 per cent; granulated sugar, 23 per cent; onions, 11 per cent; lamb and rolled oats, 8 per cent each; hens, 7 per cent; plate beef, 6 per cent; flour, 5 per cent; sirloin steak, rib roast, chuck roast, bread, and Cream of Wheat, 4 per cent each; round steak and raisins, 3 per cent each; canned salmon and rice, 2 per cent each; ham, evaporated milk, macaroni, baked beans, tea, coffee, and bananas, 1 per cent each. Bacon, nut margarine, cheese, and Crisco increased less than five-tenths of 1 per cent each.

The 11 articles which decreased in price were: Strictly fresh eggs, 8 per cent; butter, 5 per cent; lard and canned tomatoes, 3 per cent each; pork chops, storage eggs, and oranges, 2 per cent each; fresh milk, canned corn, canned peas, and prunes, 1 per cent each.

Oleomargarine, corn meal, corn flakes, and navy beans were the same in price as in December, 1919.

During the year period, January, 1919, to January, 1920, 25 of the 44 articles for which prices were secured on both dates increased as follows: Onions, 120 per cent; cabbage, 98 per cent; potatoes, 69 per cent; granulated sugar, 65 per cent; raisins, 53 per cent; prunes, 47 per cent; coffee, 41 per cent; rice, 31 per cent; flour, 23 per cent; rolled oats, 18 per cent; canned salmon, 16 per cent; Crisco, 13 per cent; Cream of Wheat and bananas, 11 per cent each; oleomargarine and strictly fresh eggs, 10 per cent each; bread, 8 per cent; fresh milk and corn meal, 6 per cent each; hens and butter, 5 per cent each; evaporated milk and storage eggs, 4 per cent each; lard and macaroni, 2 per cent each; and lamb and tea, 1 per cent each.

Articles which decreased in price during the year were: Navy beans, 18 per cent; plate beef, 16 per cent; bacon, 14 per cent; canned tomatoes, 11 per cent; chuck roast and baked beans, 10 per cent each; pork

¹ See first paragraph of footnote on p. 26. This comparison is based on all the articles for which prices have been secured each month since 1913, weighted according to the consumption of the average family. Lamb, for which the Bureau has no consumption figures, is not included in this comparison.

chops, 8 per cent; ham and canned corn, 6 per cent each; round steak, 5 per cent; rib roast, 4 per cent; cheese and canned peas, 2 per cent each; and sirloin steak, nut margarine, and oranges, 1 per cent each. The price of corn flakes was the same as in January, 1919.

¹ Increase of less than five-tenths of 1 per cent. ² No change in price.

³ Baked weight.

⁴ See first paragraph of footnote on p. 26; lamb is not included.

To show more clearly the extent of the change in the price of each article within the last year, the chart on page 29 has been prepared in which the articles are arranged in the order of per cent of change in the year interval, beginning with onions, for which the

price increased 119.6 per cent (in other words, considerably more than doubled), and ending with dry navy beans, for which article, the price decreased 18.1 per cent within the year.

Table 2 lists the articles arranged in the same order as in the chart, from greatest increase to greatest decrease. In order to show minute differences as between articles, the percentage of change is carried to one decimal place; even then there are two instances in which two articles had the same percentage of change.

This table and the chart takes no account of the changes in the months intervening between January, 1919, and January, 1920.

TABLE 2.—ARTICLES LISTED BY PER CENT OF CHANGE IN PRICE BETWEEN JANUARY, 1919, AND JANUARY, 1920.

Articles that increased January, 1919, to January, 1920.	Per cent of in- crease.	Articles that decreased January, 1919, to January, 1920.	Per cent of de- crease.

¹ No change in price.

The chart is drawn on a logarithmic rather than on an arithmetic scale. The logarithmic scale shows better the comparative effect of changing prices than would an arithmetic scale.¹ For, if a commodity changes in price, say from \$1 to \$1.50, the price rises 50 per cent and the capacity to buy this article is diminished by one-third, while if the same commodity changes from \$1 to \$0.50, which means a fall of 50 per cent, the capacity to buy is doubled. A fall of 50 per cent from a given price has therefore a greater effect on the family budget than a 50 per cent rise from the same price and should be shown on a correspondingly larger scale.

For the seven-year period, January, 1913, to January, 1920, 2 of the 24 articles for which prices were secured in January, 1913, and upon which this comparison can be based, increased over 200 per

¹ For discussion of the logarithmic chart, see article on "Comparison of arithmetic and ratio charts," by Lucien W. Chaney, MONTHLY LABOR REVIEW for March, 1919, pp. 20-34. Also, The "Ratio" Chart, by Prof. Irving Fisher, reprinted from Quarterly Publications of the American Statistical Association, June, 1917, 24 pages.

cent. Potatoes were 238 per cent and granulated sugar 207 per cent higher than in January, 1913. This means that the price in January, 1920, was more than three times what it was in 1913. The price of 9 other articles more than doubled during this period. Pork chops increased 101 per cent; lamb, 102 per cent; hens, 107 per cent; rice, 110 per cent; corn meal, 120 per cent; lard, 121 per cent; strictly fresh eggs, 123 per cent; storage eggs, 143 per cent; and flour, 145 per cent.

¹ No change in price.

² Baked weight.

³ Increase of less than five-tenths of 1 per cent.

⁴ See first paragraph of footnote on p. 26; lamb is not included.

In Table 4 are given the average prices for each of the 44 articles of food for each month of 1919 and for the years 1913 and 1919. The percentage changes in the prices of each of the articles for which prices were secured in 1913 are shown in Table 6, on page 36. These relative figures show the relation that the price of each article for each month, January, 1913, to January, 1920, bears to the average price of each article in the year 1913.

Table 5 shows for each month of 1919, and for the years 1913 and 1919, the average family expenditure for 22 articles of food¹ weighted according to the consumption of the average family. The percentage changes in these expenditures, as compared with the average expenditure in the year 1913, are shown by the use of relative figures. For example, the average expenditure in the year 1919 is represented by the relative figure 186 when the average expenditure for the year 1913 is taken as the base, or 100. This shows a percentage increase of 86 per cent. These relative figures are also shown in the last column of Table 6.

¹ See first paragraph of footnote on p. 26; lamb is not included.

TABLE 4.—AVERAGE RETAIL PRICES AND AVERAGE FAMILY EXPENDITURES FOR CERTAIN SPECIFIED ARTICLES OF FOOD FOR THE YEAR 1913, JANUARY TO DECEMBER, 1919, INCLUSIVE, AND FOR THE YEAR 1919.

Relative Retail Prices of 22 Articles of Food.

IN TABLE 6 the average monthly and yearly prices of 22 food articles¹ are shown as relative prices or *percentages* of the average prices for the year 1913. These relatives are computed by dividing the average price of each commodity for each month and each year by the average price of that commodity for 1913. The relative prices or percentages are computed to enable the reader more readily to grasp the *per cent* of change in the prices of an article. Relative prices must be used with caution, however. For example, the relative price of pork chops in November, 1919, was 200, which means that the money price was 200 per cent of the money price in 1913 or, in other words, the price doubled. The relative price of pork chops in December was 181, showing a drop of 19 points since November. This is not a drop of 19 per cent. It is a drop of 19 points from 200, which is a decrease of only 9.5 per cent.

In the last column of this table are given index numbers showing the changes by months and years in the retail cost of the 22 food articles weighted according to the importance of each article in the consumption of the average family. To aid the general reader, a brief description of the method used to compute these index numbers is given. The average price per unit of each commodity is multiplied by the number of units of that commodity consumed by the average family. The products are the cost to the average family of each of the 22 food articles. These products for each month and year are added. The aggregates thus obtained give the cost to the average family for each month and year of the 22 food articles. These aggregates show the actual money cost of the family market basket for each month and year. It would be very difficult to see at a glance the percentage changes in the cost of the family market basket from these aggregate money costs. The aggregates are therefore changed to percentages of the aggregate cost for the year 1913 by dividing each aggregate by the 1913 aggregate. The principle is the same as that used in converting the money prices of individual articles into relatives or percentages of the 1913 prices. The percentages thus obtained are called index numbers. They show what the cost of the family market basket is in each month and year in percentages of the cost of the same market basket in the year 1913. Since index numbers are merely relatives or percentages of the prices of a group of commodities, they must be used with all the caution required in the use of relative prices in general. Prices are obtained each month for 43 food articles, but only 22 of these articles are included in the retail food price index because the amounts consumed by the average family have been obtained as yet for only these 22 articles. Those

¹ See first paragraph of footnote on p. 28; lamb is not included.

articles comprise about two-thirds of the entire food budget of the average family and reflect with great accuracy *changes* in the cost of the food budget.

From September, 1915, there has been a steady increase in the cost of these 22 articles of food. In December, 1918, the cost of these foods was 87 per cent above the 1913 average. In January, 1919, there was a slight decline. February prices declined 7 per cent, but from that date until June the prices advanced. In June there was a decline of less than five-tenths of 1 per cent. July prices increased 3 per cent. August prices showed a further increase of 1 per cent, reaching the highest level up to that date. In September there was a decrease of 2 per cent; in October, a further decrease of two-tenths of 1 per cent; but in November, there was an increase of more than 2 per cent, which brought the cost up to the previous high-water mark in August. In December there was a further increase of 2.6 per cent. This made the cost in December of these 22 food articles 2.6 per cent higher than ever. In January, 1920, there was a further increase of 2 per cent. Using the average cost in the year 1913 as the base, or 100, the relative figure representing the January cost was 201, or an increase of 101 per cent over the year 1913, which means that the price of these 22 foods has more than doubled since 1913.

The curve shown in the chart on page 39 pictures more readily to the eye the changes in the cost of the family market basket and the trend in the cost of the food budget than do the index numbers given in the table. The chart has been drawn on the logarithmic scale¹ because the percentages of increase or decrease are more accurately shown than on the arithmetic scale.

Retail Prices of Food in 50 Cities on Specified Dates.

AVERAGE retail food prices are shown in Table 7 for 19 cities for December 15, 1919, and for January 15 of each year, 1913, 1914, 1918, 1919, and 1920. These cities are as follows:

Atlanta, Ga.	Denver, Colo.	Pittsburgh, Pa.
Baltimore, Md.	Detroit, Mich.	St. Louis, Mo.
Birmingham, Ala.	Los Angeles, Calif.	San Francisco, Calif.
Boston, Mass.	Milwaukee, Wis.	Seattle, Wash.
Buffalo, N. Y.	New Orleans, La.	Washington, D. C.
Chicago, Ill.	New York, N. Y.	
Cleveland, Ohio.	Philadelphia, Pa.	

In Table 8, average prices are shown for December, 1919, and January, 1920, for 31 other cities as follows:

Bridgeport, Conn.	Little Rock, Ark.	Portland, Me.
Butte, Mont.	Louisville, Ky.	Portland, Oreg.
Charleston, S. C.	Manchester, N. H.	Providence, R. I.
Cincinnati, Ohio.	Memphis, Tenn.	Richmond, Va.
Columbus, Ohio.	Minneapolis, Minn.	Rochester, N. Y.
Dallas, Tex.	Mobile, Ala.	St. Paul, Minn.
Fall River, Mass.	Newark, N. J.	Salt Lake City, Utah.
Houston, Tex.	New Haven, Conn.	Scranton, Pa.
Indianapolis, Ind.	Norfolk, Va.	Springfield, Ill.
Jacksonville, Fla.	Omaha, Nebr.	
Kansas City, Mo.	Peoria, Ill.	

¹ For discussion of the logarithmic chart, see article on "Comparison of arithmetic and ratio charts," by Lucien W. Chaney, MONTHLY LABOR REVIEW for March, 1919, pp. 20-34. Also, The "Ratio" chart, by Prof. Irving Fisher, reprinted from Quarterly Publications of the American Statistical Association, June, 1917, 24 pages.

TREND IN RETAIL PRICES OF 22 FOOD ARTICLES, COMBINED, FOR THE UNITED STATES, BY MONTHS, JANUARY, 1913, TO JANUARY, 1920.

[Average for 1913=100.]

TABLE 7.—AVERAGE RETAIL PRICES OF THE PRINCIPAL ARTICLES OF
[The prices shown in Tables 7 and 8 are computed from reports sent monthly to the Bureau by retail

Comparison of Retail Food Costs in 50 Cities.

TABLE 9 shows for 39 cities the percentage of increase or decrease in the retail cost of 22 food articles¹ combined, in January, 1920, compared with the average cost in the year 1913 and in January and December, 1919. For 11 other cities, comparisons are given for the one-year and one-month periods. These cities have been scheduled by the Bureau at different dates since 1913.

The average family expenditure is based on the prices sent to the Bureau each month by retail dealers, and on the average family consumption of these articles in each city.

The amounts given as the expenditures in January and December, 1919, and in January, 1920, represent the amounts necessary to buy a year's supply of these 22 food articles when purchased at the average retail prices charged in the months specified. This method makes it easier to note the increase over the year 1913. The year 1913 has been selected for the comparison because it was the last year before the war when prices were normal.

No attempt should be made in this table to compare one city with another, as the average number of persons in the family varies from city to city, and these 22 food articles represent a varying proportion of the entire food budgets according to locality. This table is intended to show merely comparisons in the retail cost of these 22 food articles for each city.

¹ See first paragraph of footnote on page 26; lamb is not included.

TABLE 9.—RETAIL COST OF 22 FOOD ARTICLES,¹ COMBINED, IN JANUARY, 1920, COMPARED WITH THE COST IN JANUARY AND DECEMBER, 1919, AND WITH THE AVERAGE COST IN THE YEAR 1913, BY CITIES.

¹ See first paragraph of footnote on page 26; lamb is not included.² Cost of year's supply at prices charged in specified months.³ Decrease.

As shown in Table 9 the average family expenditure for 22 articles of food increased during the month from December 15 to January 15 in 41 cities and decreased in 9 cities. In Memphis and Mobile the decrease was 2 per cent and in Atlanta, Birmingham, Cleveland, Denver, Kansas City, Omaha, and Portland, Oreg., the decrease was 1 per cent. In each of 7 cities the expenditure increased 1 per cent; in 9 cities, 2 per cent; in 16 cities, 3 per cent; and in 6 cities, 4 per cent.

In Butte and Dallas, the increase was 5 per cent; and in Fall River, 6 per cent.

During the year period from January, 1919, to January, 1920, the greatest increase, or 16 per cent, was shown in Minneapolis. The next largest increase, or 11 per cent, was in Chicago, Detroit, and Springfield. The other cities showed increases ranging from 1 per cent in Baltimore to 10 per cent in Cincinnati, Fall River, Omaha, Peoria, St. Louis, and St. Paul. As compared with the average expenditure in the year 1913, the following cities showed an increase of 100 per cent and over: Fall River, 100 per cent; Atlanta, Cincinnati, Dallas and Memphis, 101 per cent each; Chicago, 102 per cent; New Orleans and Pittsburgh, 103 per cent each; Baltimore and New York, 104 per cent each; Birmingham, Milwaukee, Omaha, Providence and Scranton, 106 per cent each; Richmond, 107 per cent; Buffalo, Charleston, and Washington, 108 per cent each; Minneapolis, 109 per cent; and Detroit and St. Louis, 111 per cent each.

Retail Prices of Coal.¹

TABLE 10 shows the average retail prices of coal on January 15 and July 15 of each year, 1913 to 1919, inclusive, and on January 15, 1920, by cities. The prices are those quoted by the retail trade for household use.

In addition to the prices for Pennsylvania anthracite, prices are shown for Colorado, Arkansas, and New Mexico anthracite in those cities where these coals form any considerable portion of the sales for household use.

The prices shown for bituminous coal are averages made on the several kinds. The coal dealers in each city were asked to quote prices on the kinds of bituminous coal usually sold for household use.

The prices quoted are for coal delivered to consumers but do not include charges for storing the coal in cellar or coal bin where an extra handling is necessary.

Prices are shown for coal only in the cities in which prices are scheduled for food and are shown for the years when food prices were obtained.

¹ Prices of coal are secured semiannually and published in the March and September issues of the MONTHLY LABOR REVIEW.

TABLE 10.—RETAIL PRICES PER TON OF 2,000 POUNDS OF COAL, FOR HOUSEHOLD USE, ON JAN. 15 AND JULY 15 OF EACH YEAR, 1913 TO 1919, INCLUSIVE, AND JANUARY 15, 1920, BY CITIES.

Table 11 shows for the United States both average and relative retail prices of Pennsylvania white ash coal, stove and chestnut sizes, and of bituminous coal on January 15 and July 15 of each year, 1913 to 1919, inclusive, and January 15, 1920. An average price for the year 1913 has been made from the averages for January and July of that year. The average prices for January and July of each year have been divided by this average price for the year 1913 to obtain the relative prices.

January, 1920, compared with January, 1913, shows an increase of 63 per cent in the price of Pennsylvania white ash stove coal, 61 per cent in the price of chestnut, and 62 per cent in the price of bituminous.

January, 1920, compared with January, 1919, shows an increase of 9 per cent in the price of Pennsylvania white ash stove, 11 per cent in the price of chestnut, and 12 per cent in the price of bituminous.

Index Numbers of Wholesale Prices in the United States.

WHOLESALE prices in the United States continued to advance during January of the present year, the Bureau's weighted index number rising to 248 as compared with 238 for December and 203 for January, 1919, the average for the year 1913 being regarded as 100. Food products registered the greatest increase from December to January, the index number rising from 234 to 253, or slightly more than 8 per cent. The group of lumber and building materials showed practically 7 per cent increase (from 253 to 268), cloths and clothing nearly 4½ per cent (from 335 to 350), while metals and metal products advanced nearly 5 per cent (from 169 to 177). The index number for house-furnishing goods increased from 303 to 324, that for chemicals and drugs from 179 to 189, and that for miscellaneous articles from 220 to 227. Somewhat smaller increases were recorded for farm products (244 to 246), and fuel and lighting (181 to 184).

The large increase in the index number for the group of food commodities is due mainly to the rise in sugar and potatoes. The price of raw sugar in January advanced more than 26 per cent, granulated sugar nearly 42 per cent, and potatoes nearly 37 per cent above the December average. These articles, being heavily weighted because of their great importance, have a decided influence on the index number for the group. The decrease in the price of butter, eggs, and a few other commodities was offset by the increase in the price of coffee, flour, and meat products. In the cloths and clothing group, the increase in the index number is due largely to the rise in prices of cotton and woolen goods, carpets, and silk. The increase in the index numbers for the remaining groups is about what should be expected in view of the recent advances in the prices of iron and steel products, brick and lumber, household furniture, cottonseed meal, paper, and other staple articles.

In the 12 months from January, 1919, to January, 1920, as measured by changes in the index numbers, farm products increased nearly 11 per cent, food slightly more than 22 per cent, and cloths and clothing nearly 50 per cent. During the same time, fuel and lighting increased over 8 per cent, metals and metal products about 3 per cent, and lumber and building materials nearly 69 per cent. House-furnishing goods increased nearly 49 per cent in this time, and miscellaneous commodities about 7 per cent. Chemicals and drugs, on the contrary, decreased slightly more than 1 per cent in the same period.

INDEX NUMBERS OF WHOLESALE PRICES IN THE UNITED STATES, DECEMBER, 1919, AND JANUARY, 1920, AND JANUARY, 1913 TO 1919, BY GROUPS OF COMMODITIES.

[For detailed statement of index numbers since January, 1913, and for yearly data since 1890, see MONTHLY LABOR REVIEW for February, 1920, pages 87 to 89.]

¹ Preliminary.

Wholesale Prices in the United States and Foreign Countries, 1890 to December, 1919.

IN THE following table the more important index numbers of wholesale prices in the United States and several foreign countries, as compiled by recognized authorities, have been reduced to a common base in order that the trend of prices in the several countries may be directly compared. The results here shown have been obtained by merely shifting the base for each series of index numbers to the year 1913, i. e., by dividing the index for 1913 on the original base into the index for each year or month on that base. These results are therefore to be regarded only as approximations of the correct index numbers in the case of series constructed by averaging the relative prices of individual commodities.¹ This applies to the index numbers of the *Annalist*, the *Economist*, the *Statist* (Sauerbeck), the Department of Labor of Canada, the *Statistique Générale* of France, and, presumably, the *Monthly Statistical Bulletin* of New South Wales, Australia. The index numbers of the U. S. Bureau of Labor Statistics, Bradstreet, Dun, Gibson, and the Bureau of Census and Statistics of Australia are built on aggregates of actual money prices, or relatives made from such aggregates of actual prices, and therefore can be readily shifted to any desired base. In cases where no index numbers for years are shown in the original sources, the figures here presented have been obtained by averaging the 12 monthly index numbers.

¹ For a discussion of the defects of index numbers constructed according to this method, see Bulletin No. 181 of the Bureau of Labor Statistics, pp. 245-252.

Price Changes, Wholesale and Retail, of Important Food Articles in Selected Cities.

EXACT comparison of wholesale with retail prices is not attempted in the following tables. Some food products—fresh meats, for example—are not sold by the retailer in the same form in which they leave the wholesaler, hence strictly comparable prices are not obtainable. It was found impracticable also to obtain both wholesale and retail prices for the same date, the retail prices being those prevailing on the 15th of the month, while the wholesale prices are for a variable date, usually several days prior to the 15th. The figures in the table are therefore to be considered as merely indicative of price variations in the retail as compared with the wholesale markets.

To assist in comparing the fluctuations at wholesale and at retail, the differential between the two series of quotations at successive dates is given. It should not be assumed, however, that this differential in any case represents the margin of profit to the retailer, since, in addition to a possible difference of grade between the articles shown at wholesale and retail, the various items of handling cost to both the wholesaler and retailer are included in the figure.

WHOLESALE AND RETAIL PRICES OF IMPORTANT FOOD ARTICLES IN SELECTED CITIES.

[The initials W=wholesale, R=retail. The wholesale price is the mean of the high and low quotation on the date selected, as published in leading trade journals. The retail price is the average of prices reported to the Bureau of Labor Statistics by dealers.]

Cost of Living in Lawrence, Mass., in 1919.

THE National Industrial Conference Board has recently published the results of a study¹ undertaken for the purpose of "ascertaining the cost of maintaining a minimum but reasonable standard of living for a representative wage earner's family" consisting of man, wife, and three children under 14, and the cost of maintaining "a somewhat better standard, according to conditions actually existing" in Lawrence, Mass. Using the standard budgets developed in a similar study made by the board, in Fall River, the board secured the prices being charged for food, clothing, shelter, fuel, light, and sundries.

It was found that the minimum average cost of all items combined was \$1,385.79. To maintain this minimum standard would require an average weekly income of \$26.65 the year round. The more liberal budget was found to require a yearly expenditure of \$1,658.04, to meet which the family must have a steady weekly income of \$31.88. The budget makes no provision for savings except such as are effected through insurance.

The following table shows for each item of expenditure the average cost per week and per year of the minimum budget and the more liberal budget. For the sake of comparison the average annual expenditure of 109 families in Lawrence, as shown by an investigation made in 1918 by the United States Bureau of Labor Statistics, is given.²

BUDGETS ESTABLISHED BY NATIONAL INDUSTRIAL CONFERENCE BOARD, NOVEMBER, 1919, AND EXPENDITURE FOR THE SAME ITEMS, AS SHOWN BY THE BUREAU OF LABOR STATISTICS STUDY, 1918, FOR FAMILIES OF LAWRENCE, MASS.

Item of expenditure.	Budget of National Industrial Conference Board.				U. S. Bureau of Labor Statistics study, 1918.
	Minimum standard.		More liberal standard.		
	Average weekly cost.	Average yearly cost.	Average weekly cost.	Average yearly cost.	
Food.....	\$11. 55	\$600. 60	\$12. 55	\$652. 60	\$651. 46
Shelter.....	3. 50	182. 00	4. 50	234. 00	176. 59

All items.....	26. 65	1, 385. 79	31. 88	1, 658. 04	1, 504. 67

The "representative wage earner's family" taken by the board consisted of man, wife, and three children—a boy 13 to 14 years of

¹ National Industrial Conference Board. The cost of living among wage earners, Lawrence, Mass., November, 1919. Boston, 1919. 21 pp.

² MONTHLY LABOR REVIEW, May, 1919, p. 156.

age, a girl 8 to 9 years of age, and a boy 5 to 6 years of age. In terms of the standard of food requirement established by the Bureau of Labor Statistics, this is a family of 3.95 equivalent adult males as compared with the average family of 3.64 equivalent adult males of the Bureau's study. The annual expenditure for food per equivalent adult male amounts to \$165.22 in the board's study and \$178.97 in the Bureau's study. The allowance made by the National Industrial Conference Board as a fairly liberal expenditure for this item is therefore \$13.75 less per year than the amount actually spent by the 109 families studied by the Bureau. The Bureau's study, however, included in this number families with incomes ranging from less than \$900 up to \$2,500. For the 24 families of 3.18 equivalent adult males each, taken in the Bureau's study, having incomes of \$1,500 and under \$1,800—in which group the income allowed by the board would fall—the expenditure for food was \$652.02, or a yearly average of \$205.04 per equivalent adult male. Here the difference between the amount allowed by the National Industrial Conference Board and the amount found by the Bureau actually to have been spent is still greater, being \$39.82. It must be remembered also that this difference takes no account of the increase in the price of food since 1918¹ when the Bureau's investigation was made.

With the exception of the item of food, however, the figures arrived at by the board in its study and those shown by the Bureau are in substantial agreement, if allowance is made for increases since 1918.

The board found that the following increases in the items of its budget have taken place since 1914:

INCREASE IN COST OF ITEMS OF BUDGET BETWEEN NOVEMBER, 1914, AND NOVEMBER, 1919.

Item.	Minimum standard.	More liberal standard.
	<i>Per cent.</i>	<i>Per cent.</i>
Food.....	95	95
Shelter.....	35	35

Sundries.....	85	76
All items.....	84	80

¹ Figures published by the Bureau (MONTHLY LABOR REVIEW, January, 1920, p. 72) show that the retail prices of 22 articles of food increased 4.9 per cent between Nov. 15, 1918, and Nov. 15, 1919.

Changes in Retail Prices in Canada, 1914 to 1919.

THE Canadian Labor Gazette for January, 1920 (pp. 86-92), gives a review of price movements in the Dominion during 1919, with a table showing index numbers of wholesale prices by groups of commodities in certain months of the years 1914 to 1919, and another table giving the cost per week of a family budget of staple foods, fuel and lighting, and rent in terms of the average prices in 60 cities. The data in the second table are also presented by Provinces. The following table summarizes the information contained in the second table, the prices given being confined to two months in each year 1914 to 1918, and to three months in 1919.

COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN 60 CITIES IN CANADA.

Cost of Living in Paris in January, 1920, Compared with 1914 and April, 1919.

THE Economist (London) for January 10, 1920, publishes a table, received from its Paris correspondent, showing changes in the cost of living in that city in January, 1920, as compared with the year 1914 and April, 1919. Prices are given in francs, conversions into United States money not being made because of the constantly fluctuating value of the franc. Normally the par value of the franc is 19.3 cents. Only the food and clothing items of the original table are presented.

² A liter is equivalent to 1.057 quarts.

Retail Price Changes in Great Britain.

THE following table gives for Great Britain the increase over July, 1914, in the cost of food and general family expenditure for February of each year, 1915 to 1920, and for each month in 1919. The food items included in this report are: Ribs and thin flank of beef, both British and chilled or frozen; legs and breast of mutton, British and chilled or frozen; bacon; fish; flour; bread; tea; sugar; milk; butter, fresh and salt; cheese; margarine; eggs; and potatoes.

The table gives percentage of increase, and is not one of relative prices, as is the table given for the United States. When making comparisons this should be borne in mind, and to obtain the relative prices it is necessary to add 100 to the percentage as given, e. g., for January, 1919, the increase in cost of food is 130 per cent, the relative price being 230.

The figures represent two comparisons: First, the increase in prices, based on the same kinds and quantities as used in July, 1914; second, the increase, based on the change in the standard of living, resulting from a substitution of one kind of food for another to meet war-time conditions.

The table shows that retail prices of food were 135 per cent higher in February, 1920, than in July, 1914, and that the increased cost of all items in the family budget was 130 per cent. On account of the lower standard of living at the later date the expenditures of wage earners for food increased only 112 per cent and for all items in the family budget 115 per cent during the same period.

PER CENT INCREASE IN COST OF FOOD AND ALL ITEMS IN FAMILY BUDGET IN GREAT BRITAIN BASED ON JULY, 1914.

[Compiled from the British Labor Gazette.]

¹ Approximate increase if standard of consumption is changed as follows: Eggs omitted; margarine substituted for butter; sugar and fish consumption cut one-half.

² Not including taxes.

³ Including taxes.

⁴ The increase, excluding additional taxation, is 7 per cent less.

⁵ The increase, excluding additional taxation, is 6 per cent less.

Cost of Living in South Africa, 1910 to September, 1919.¹

A SUPPLEMENT to the half-yearly abstract of statistics issued by the Office of Census and Statistics of the Union of South Africa in June, 1919, contains a table of index numbers showing the changes in the cost of living from 1910 to September, 1919, the former year being taken as the base, or 1,000. These index

¹ Union of South Africa. Office of Census and Statistics. Supplement to half-yearly Abstract of union statistics. No. 1, June, 1919. Pretoria, October, 1919. 7 pp.

numbers represent weighted averages for nine cities, namely, Bloemfontein, Cape Town, Durban, East London, Johannesburg, Kimberley, Pietermaritzburg, Port Elizabeth, and Pretoria, and cover the items of food, fuel, light, and rent.

Retail Prices of Food in Czecho-Slovakia, April, 1914, and December, 1919.

A TABLE recently published by a Prague daily paper¹ contains comparative data as to official retail prices in April, 1914, and December, 1919, of a number of important foodstuffs. The increase of the prices ruling in December, 1919, over those of April, 1914, is enormous, varying between 345 per cent in the case of sugar and 2,285 per cent in that of potatoes. These large increases are, of course, due not only to the prevailing shortage of food but chiefly to the great depreciation of the crown. The table is reproduced below.

RETAIL FOOD PRICES IN PRAGUE, APRIL, 1914, AND DECEMBER, 1919.

Article.	Unit.	Retail price.		
		April, 1914.	December, 1919.	Relative price.

¹ Prager Tagblatt. Prague, Dec. 24, 1919.

² Owing to present fluctuations in the value of the crown, conversions are not made into United States money. Normally, the par value of a crown equals 20.3 cents.

WAGES AND HOURS OF LABOR.

Wages and Hours of Labor in the Cigar and the Men's Clothing Industries.

AS A part of the industrial survey of 1919 wage data were gathered concerning employees engaged in the manufacture of cigars and of men's clothing. A summary presentation of the results of the investigation of these two industries is contained in the tables included in this article.

The statistics relating to the cigar industry were obtained from establishments making cigars classed for revenue purposes as full size. Figures are not included from factories making cigarettes, little cigars, stogies, or tobies. The material for the report on the men's clothing industry was obtained from establishments making men's outer garments, coats, pants, vests, and overcoats for the trade; in other words, what is commonly known as men's ready-made clothing.

The manufacture of ready-made clothing is distinctly an urban industry, and is very largely concentrated in a few cities. The manufacture of cigars, while much more widely distributed than that of men's clothing, is still preeminently urban. Because of this peculiarity of the two industries data concerning them, unlike that of the other industries included in the survey, are presented by cities and not by States. The cities covered by the survey of each industry, and the number of establishments and the number of employees included in each city, are shown in the following table:

TABLE 1.—NUMBER OF ESTABLISHMENTS AND NUMBER OF EMPLOYEES IN THE CIGAR AND MEN'S CLOTHING INDUSTRIES, BY CITIES.

Cities.	Cigars.		Men's clothing.	
	Number of establishments.	Number of employees.	Number of establishments.	Number of employees.
Allentown, Pa.	3	473		
Baltimore, Md.	5	530	4	2,340
Binghamton, N. Y.	4	967		
Boston, Mass.	3	614	16	808
Buffalo, N. Y.			11	479

Newark, N. J.	2	135	11	324
New York, N. Y.	11	3,387	21	2,094
Philadelphia, Pa.	7	1,690	15	1,424
Reading, Pa.	4	684		
Rochester, N. Y.			10	2,566
St. Louis, Mo.			5	473
Tampa, Fla.	6	1,830		
Total.	78	16,715	134	19,253

It was not possible to arrange the survey in such a way as to obtain the records of all establishments in an industry for the same pay-roll period. Industry was in a very unsettled state during the progress of the survey. Conditions changed so rapidly that the exact date of the material presented is a matter of more importance than it would be in a normal year. The pay-roll periods included in each industry were distributed by months as shown in the following table:

TABLE 2.—NUMBER OF PAY-ROLL PERIODS IN SPECIFIED MONTHS, 1918 AND 1919.

Industry.	Total number of pay-roll periods.	Number of pay-roll periods in—									
		1918.					1919.				
		Aug- ust.	Sep- tem- ber.	Octo- ber.	No- vem- ber.	De- cem- ber.	Janu- ary.	Feb- ruary.	March.	April.	May.
Cigars.....	78					6	2	21	18	14	17
Men's clothing.....	134	1	5	2	3	22	33	48	20		

It will be seen from the table that in the cigar industry 70 of the 78 pay-roll periods fell within the four months of February, March, April, and May; while in the men's clothing industry 123 of the 134 pay-roll periods fell within the months of December, January, February, and March. Information is presented as of the year 1919. In neither of the industries, so far as could be ascertained, were there any changes in rates of wages during the progress of the survey.

The information concerning hours and earnings on which the tables are based was obtained directly from the pay rolls or other records of the companies by agents of the Bureau. Other information was obtained from responsible officials in personal interviews. Wherever the records of the company failed to indicate the time actually worked by pieceworkers during the selected pay-roll period, arrangements were made to have such a record kept for a future period, from which record data were afterwards copied. In all cases the figures copied by the agents represented the hours actually worked and earnings actually received.

As the material comes in to the office the figures for hours and those for earnings are both in incommensurable form on account of inequalities in the length of pay-roll periods and in the time worked by different individual employees. Before they can be presented in tabular form it is necessary to reduce both hours and earnings to a common denominator. The comparable figures selected for use in the following tables are hours worked per day and per week, and earnings per hour and per week. These figures are obtained in the following manner:

The hours per day of each employee are obtained by dividing the number of hours worked by him during the pay-roll period by the number of week days, holidays omitted, in the pay-roll period. Thus in the case of pay rolls for a single week containing no holidays,

the hours worked by each employee during the pay-roll period are divided by six, whether the employee worked on each of the six days or not. The resulting figure represents the number of hours per day that the employee would have worked if his time had been distributed uniformly among the week days of the pay-roll period.

All the schedules used in making up the following tables were for pay-roll periods one week in length. It was therefore possible to obtain the average hours actually worked per week by the employees in any occupation by dividing the sum of the hours worked by all the employees in the occupation by the number of employees.

By full-time hours per week is meant the number of hours that is thought of in the occupation as constituting a normal week's work, the number of hours the employee regularly expects to work and the employer expects him to work. This figure was obtained from the officials of the various establishments by agents of the Bureau. The difference between full-time hours per week and average hours actually worked per week is an indication of the degree of irregularity of employment among the employees to whom the figures apply.

For comparative purposes the earnings of each employee are reduced to the form of average earnings per hour by dividing his total earnings for the pay-roll period by the total number of hours worked by him during the period. The resulting figure indicates how much he would have earned each hour he worked if his earnings had been distributed uniformly over all the hours actually worked by him during the period.

The average weekly earnings for any occupation are obtained by dividing the aggregate weekly earnings of all employees in the occupation by the number of employees engaged in it. These average actual earnings per week in each occupation, computed as described above, are brought into comparison in the tables with average full-time weekly earnings in the same occupation. In a general way the ratio of full-time earnings to actual earnings might be expected to be identical with the ratio of full-time hours to actual hours. As a matter of fact, however, these ratios may vary to a considerable extent. Actual earnings per week include the week's share of all extra pay for overtime and of all premiums and bonuses. Full-time earnings, on the other hand, represent what an employee can earn by working exactly the normal full-time hours of the establishment. The factor of extra pay for overtime, included in computing actual weekly earnings, was in general eliminated in computing full-time earnings. In those instances, however, which were comparatively rare in these industries, in which the normal working day consisted of a certain number of hours at a basic rate, and an additional hour or two at an increased rate, the extra pay for such additional hour was included in the full-time earnings. Each bonus had to be considered separately.

Those that could be earned in regular time, as, for example, bonuses for regularity of attendance, were included; those that could be earned only by working overtime were excluded; while those earned partly in regular time and partly in overtime, as indicated by the relative amount of overtime work performed, were distributed accordingly. The result of eliminating these factors of extra pay for overtime and bonus is to reduce the ratio of full-time earnings to actual earnings somewhat below the ratio of full-time hours to actual hours.

In many cigar factories the hours of work are very irregular, the employees coming and going as they please. In such factories there is no such thing as generally recognized "full-time hours." For that reason it has not been practicable to present figures for full-time hours per week or full-time weekly earnings in the cigar industry.

In the detailed tables which follow it has been necessary to omit a number of occupations owing to limitations of space. Out of a total of 12 occupations for which data were obtained in the cigar industry 10 are included in the tables. In these occupations are found 16,460 employees out of the total of 16,715 included in the survey. The corresponding figures for men's clothing are 10 out of 12 occupations, and 18,589 out of 19,253 employees.

The last previous investigation of the cigar industry made by the Bureau was carried out in 1913; for the men's clothing industry the date was 1914. Table 5 gives relative hourly earnings for a number of selected occupations in the cigar industry, and Table 6 gives relative full-time hours, hourly earnings, and full-time earnings for the men's clothing industry. For reasons already stated it is impracticable to compute full-time hours or full-time earnings for the cigar industry. The figures for 1913 are in all cases used as the base. The comparison is necessarily confined to those occupations for which the requisite information in comparable form is at hand. The table also gives a relative for each industry as a whole. It seems desirable to point out certain features of the method by which the latter relatives were computed. In the first place the averages of hours and earnings on which the 1919 relative is based covered only selected occupations. In earlier years the relatives have been based on all wage-earning employees found in the establishments visited. Those employees who did not fall within any of the selected occupations were grouped in the tables under the caption "other employees." This was done not because of any value that was supposed to attach to figures for this heterogeneous group, but because it was feared that the omission of these employees might seriously affect the averages for the industry as a whole. Careful experiments carried out by the Bureau indicate that, if the selected occupations include low-paid groups, such as laborers, in proportion to their numbers in the industry, the omission of "other employees" has little effect upon industry averages.

In the second place it should be stated that the industry averages given in the table are based on all of the occupations listed in the several industries and not on those to which limitations of space made it necessary to confine the detailed tables already presented. The total number of selected occupations used in computing the industry relative was eight in the cigar industry and eight in the men's clothing industry.

In the third place the effect of bonuses and of extra pay for overtime in increasing hourly earnings has been carefully noted and every effort has been put forth to make the full-time weekly earnings represent exactly what the employees would earn by working the full-time hours of the occupation and no more. For that purpose not only has the extra pay for overtime been eliminated but also every bonus which it required overtime work to secure. On the other hand, attendance bonuses and others which could be earned in regular time have been included in the hourly rates from which full-time earnings were computed.

Finally no attempt has been made to base the relatives on data from identical establishments. With the changes that the lapse of time since the last investigation has brought about in the different establishments the plan of confining the comparison to data from identical establishments would have two disadvantages. It would in some cases seriously limit the numbers on which the comparative figures are based; in other cases it might give undue weight to changes in hours and earnings taking place in one or another of the limited number of establishments covered, when those changes did not reflect conditions in the industry as a whole. The present relatives are based on the entire body of information available for each year for which a relative is shown.

The industrial survey covered eight industries for which the Bureau had material on hand for the calculation of industry relatives. That the increases in earnings in the industries included in this report may be compared with increases in the other six industries, the relatives of each industry are given in the following table:

TABLE 7.—RELATIVE EARNINGS PER HOUR IN EIGHT INDUSTRIES: 1914, 1915 AND 1919 COMPARED WITH 1913.

[1913=100.]

Year.	Cigars.	Clothing, men's.	Furni- ture.	Hosiery and un- derwear.	Iron and steel.	Lumber.	Mill- work.	Silk goods.
1913.....	100	100	100	100	100	100	100	100
1914.....	(1)	(1)	(1)	103	103	(1)	(1)	100
1915.....	(1)	(1)	103	(1)	101	91	99	(1)
1919.....	152	171	154	184	221	194	151	191

¹ Not reported.

An examination of the table shows that in the spring of 1919, at which time the survey was carried out, employees in the cigar-making industry had received increases over the 1913 level of earnings amounting on the average to 52 per cent; at the same date the increase in the men's clothing industry amounted to 71 per cent. Over against this should be set the increase in the cost of living during the same period. According to the careful estimates made by the Bureau this had amounted to 75 per cent in the spring of 1919 as compared with the 1913 level. It will be noticed that only employees in the millwork industry had received a lower rate of increase during the period under consideration than the cigar employees had received, while the increase in the men's clothing industry had followed very closely the increase in the cost of living.

Hours of Labor of Hotel and Restaurant Employees.

By DOROTHY POPE.

AN ARTICLE on wages and hours of hotel and restaurant employees, in the MONTHLY LABOR REVIEW for September, 1919 (pp. 190-217), outlined the general scope of the investigation of this industry made by the Bureau in 1919 in 26 large cities of the country, and presented the daily rates of wages received by these employees. The number of days in the working week, the full-time weekly hours, and the arrangement of the daily hours of work prevailing in the industry are dealt with in this article.

Days in the Working Week.

ALL hotels and the majority of restaurants operate at least 13 hours a day every day throughout the year. Because they serve the public they can not close their doors at their own convenience on one day a week, and if they are to give employees one day of rest in seven, schedules of work must be so arranged that the absence of employees will not interfere with the service rendered the public. Many hotels and restaurants have accomplished this by maintaining relief employees for each occupation or group of small related occupations; but many others still arrange a seven-day working schedule for all or part of their employees. Nearly half the men and over half the women in hotels and about one-third of the men and one-fourth of the women in restaurants included in the survey work seven days a week. Some hotels in the transitional stage between a seven and a six day working week allow certain classes of employees a day off every two weeks or a half day off every week. The following table shows, by occupation, the percentage of hotel and restaurant employees who are entitled to be off duty each specified number of days.

TABLE 1.—PER CENT OF HOTEL AND RESTAURANT EMPLOYEES ENTITLED TO EACH SPECIFIED NUMBER OF DAYS OFF DUTY, BY OCCUPATION.

Occupation.	Sex.	Hotels.				Restaurants. ¹

² Less than one-half of 1 per cent.

¹ Not including 532 males and 788 females whose days off were not available from the pay-roll records.

In this table an employee is credited with receiving a half day off a week only when his hours off duty on this day are at least half his regular working hours or his work is completed by 1 p. m. Employees receiving one day off a week are shown in two groups, according to whether they receive this day off with pay or without pay, or, in other words, whether they are paid for a seven-day or a six-day week. The proportion of hotel and restaurant employees paid on a six-day basis reflects the degree to which establishments in this industry have adopted the straight six-day week, now the standard in other industries. In hotels 14 per cent of the men and 9 per cent of the women who have a day off a week are paid on this basis. In restaurants the proportion is much higher. About one-fourth of the male restaurant employees and two-fifths of the females were found in restaurants that close on Sunday; these employees necessarily fall in the class paid on the six-day basis. In the restaurants open on Sunday 63 per cent of the men and 87 per cent of the women who have a day off every week are paid on the same basis. It is also true that the percentage of both male and female employees receiving a day off a week is much larger in restaurants than in hotels.

The following table presents by cities the same information as Table 1, thus enabling comparisons to be made between different parts of the country in this respect.

¹ Less than one-half of 1 per cent.

Striking differences are found in the proportion of employees in the several cities who are allowed a day of rest in seven. The six-day working week is more prevalent in large cities than in smaller ones. This is shown by the fact that the percentage in a good deal more than

half the cities is below the average for all cities. For female hotel employees this is the condition in 18 out of 25 cities, and for female restaurant employees in 15 out of 26 cities; while for male employees the corresponding figures are 16 out of 25 and 17 out of 26. Indianapolis is the only city included in the survey in which no restaurant employee has a day of rest; but the same condition was found among male hotel employees in Atlanta and Memphis, and among females in Salt Lake City. That it is possible to arrange schedules of work for employees which will allow each one a day of rest a week is shown by the experience of San Francisco restaurants. Eleven of the 12 restaurants scheduled in that city are open on Sunday, and yet 86 per cent of all the male restaurant employees and 95 per cent of the females listed in that city receive a day off per week.

Full-Time Weekly Hours.

CONTINUOUS operation or long daily hours of operation produce great irregularity in the arrangement of daily hours of work for men and women in the several occupations. For this reason the actual hours at which employees begin and end their work each day were secured from practically every establishment included in the survey. These scheduled daily hours do not, however, afford a basis for computing with absolute accuracy the hours which each employee actually worked during the pay period studied, because at slack times the head of a department may dismiss him early and at rush times may require him to remain after regular hours to complete his work. Overtime thus worked is frequently not reckoned as overtime and is not recorded. The small amount of over time recorded for hotels and restaurants has been disregarded, therefore, in the discussion of the hours worked by employees in this industry.

Space does not permit discussion of the full-time weekly hours or daily hours of work of employees in all occupations. The hours worked by men and women in the occupations numerically the largest in the several departments of hotels and restaurants, however, are similar to the working hours of other employees in the same department, and indicative of conditions throughout the industry. The occupations of cook, dishwasher, and waiter in both hotels and restaurants, and of bellman and maid in hotels, have therefore been selected for discussion as the most common and most typical occupations in the industry. In order to present a concise picture of the weekly hours of work of men and women in these selected occupations the following summary table, showing for each occupation, except that of bellboys, the number of employees working each specified number of hours a week, has been prepared. Bellboys are not included in this table because practically all of them work under one general arrangement of daily hours.

TABLE 3.—NUMBER OF EMPLOYEES IN SELECTED OCCUPATIONS IN HOTELS AND RESTAURANTS WHOSE FULL-TIME WEEKLY HOURS WERE AS SPECIFIED.

¹ Time off duty for meals is specified and is not included in full-time weekly hours.² Time off duty for meals is not specified and is included in full-time weekly hours.

In Table 3 no distinction is made between those who work six days a week and those who work seven days a week. Naturally, however, the full-time weekly hours of employees working a seven-day week would be longer than those of employees working a six-day week. Employees working less than 36 hours a week are usually part-time workers. Relief employees, and employees who have a half day off a week but whose exact hours off are not reported, are necessarily excluded. In the majority of establishments employees who are entitled to meals eat at least one meal a day during working hours. In many establishments, especially hotels, employees have no regular time allowed in which to eat their meals, but take as much or as little time as they need or the pressure of business permits. In other establishments from 20 minutes to an hour is allowed for a meal, with never more than an hour and a half total meal allowance during working hours. In Table 3 two groups of employees are presented separately under each occupation term. In the first line the data are given for employees who receive regular time off for meals during working hours; in the second line the same information is given for those who have no specified time off for meals during working hours. Because of this arrangement a comparison of the weekly hours worked by the two groups can readily be made. In establishments where no regular time is allowed for meals the full hours on duty have necessarily been used as the regular working day, whereas in establishments where regular time is allowed for meals, such time has been deducted from the total working hours of each employee to obtain his actual working hours. This deduction of time allowed for meals, however, does not account entirely for the shorter hours worked by those in the first group under each occupation. Employees in establishments allowing regular time for meals work on the average fewer hours per week than employees in establishments which do not regulate the time for meals. In other words, an establishment which arranges regular meal periods also usually regulates more carefully hours of work and general working conditions.

The groups having regular time for meals afford the best basis of comparison of weekly hours worked by employees in the several occupations. The most striking facts brought out by the table are the extreme differences in the length of the working week of employees in the same occupation, and the long weekly hours worked by large numbers of men and by some women. Extreme variation in the length of the working week is found even among establishments in the same city, indicating an extraordinary lack of standardization in the working week. Full-time weekly hours of men are longer than those of women in all occupations. Slightly more than half the male hotel employees work between 49 and 60 hours a week, and about the same number of the male restaurant employees work between 49 and 63

hours a week; while approximately half the female hotel employees work between 48 and 56 hours a week, and the same proportion of the female restaurant employees between 42 and 54 hours a week. Twenty-two per cent of the men in all hotel and restaurant occupations work more than 60 hours a week, while 24 per cent of the women in hotel occupations and only 16 per cent of the women in restaurant occupations work 54 hours or over a week. The greatest difference in length of working week for men and women in the same occupation is found in the unskilled occupations. As the men in the skilled occupations work shorter hours than those in the unskilled occupations, their hours approximate more closely to the hours of women in these occupations. The shorter hours of the women are of course due to a certain extent to the several State laws regulating hours of women's work. A glance at the table reveals, however, that 11 women in hotels and 2 women in restaurants, including those to whom time off duty for meals is not specified, are working 84 hours or over a week. Of the men, 112 in hotels and 98 in restaurants, including both groups of employees, are working 84 hours or over a week. Eighty-four hours a week means 12 hours a day for seven days, a condition sometimes rendered more unbearable because the 12 hours' work is distributed over a stretch of 15 hours or more. Employees in the unskilled occupations suffer most frequently from hours as long as these. But even in the skilled occupations the working time is longer than in many industries and longer than is generally regarded as desirable. Of the male employees whose full-time weekly hours as shown in Table 3 do not include time off for meals, cooks in hotels and waiters in restaurants constitute the only groups with 25 per cent of their members working as little as 48 hours per week, or 50 per cent working less than 54 hours a week. Among the female employees whose working week does not include time for meals the percentage whose hours per week do not exceed 48 varies from 34 for maids to 78 for waitresses in hotels and from 55 for cooks to 75 for waitresses in restaurants.

Daily Hours of Work.

THE arrangement of the daily hours of work of hotel and restaurant employees is influenced largely by the long hours of operation of most of the departments of a hotel or restaurant, and in the case of kitchen and dining-room employees by the occurrence of peaks of business in the dining room at meal times. The unequal number of employees needed at different hours has induced a prevalence of split shifts and shifts which vary from day to day. In considering the daily hours of hotel and restaurant employees it should be borne in mind that although some may not be busy every minute during their working hours, they must nevertheless be at their posts of duty ready to respond to any call.

Waiters and Waitresses.

OF ALL hotel and restaurant employees waiters and waitresses have the most irregular hours and the most diversified arrangement of shifts. For hotels the records on which this report is based cover 4,541 waiters and 1,162 waitresses. Only one-third of these waiters and one-half of the waitresses work uniform hours day after day, the remainder work on shifts which alternate from day to day or week to week, or rotate through several days or weeks. Of those working uniform hours from day to day a minority only, consisting of one-fifth of the waiters and less than one-half of the waitresses, work straight, unbroken shifts; of these many are part-time employees who are hired for a single meal per day. The remaining four-fifths of the hotel waiters and one-half of the waitresses in the group that work uniform hours from day to day have split shifts. For employees on split shifts the time limits within which the day's work falls are only less important than the number of hours per day worked. For the waiters in this group the common arrangement of the working day is between 8 and 11 hours of work falling within between 13 and 15 consecutive hours of the day. There are 29 waiters in hotels, however, whose broken shifts extend over more than 16 hours per day; four work 13 hours a day within 18 hours. As would be expected the hours of women are less extreme than those of men. Of those having uniform split shifts from day to day the largest group in hotels have 7 and under 8 hours of work falling within between 12 and 14 hours.

In the second division of the waiters and waitresses mentioned above, those who work alternating or rotating shifts, the most common arrangement is one in which the hours alternate from day to day. Such alternating shifts are worked by 1,633 hotel waiters. The majority of these waiters work a straight shift one day and a split shift on the following day; for 35 per cent of them the split shift consists of an average of 11 hours distributed over 18 hours or more a day. Of the waitresses of this division 148 work alternating shifts. More than half of them have split shifts every day, with a different arrangement of hours on the two shifts. The prevalent working day among them is one of 9 hours or less over a stretch of less than 13 hours. Five hotel waitresses were found, however, whose working hours every day extended over a stretch of 18 hours.

In restaurants 2,222 waiters and 2,598 waitresses were listed in the survey. Of this number approximately 50 per cent of both waiters and waitresses work uniform hours from day to day, and 50 per cent work alternating or rotating shifts. Of the former group one-half of the waiters and two-thirds of the waitresses have straight, unbroken shifts. As in the case of hotel employees many of these are

part-time workers. The other 50 per cent of restaurant waiters and waitresses with uniform hours have split shifts. Their hours are similar to those of the corresponding groups in hotels. In the case of 10 waiters, however, the working hours are spread over more than 16 hours per day. The prevailing hours for women in this group are 7 and under 10 within 12 and under 14 hours per day. No waitress in this group has hours of work spread over more than 16 hours per day.

Of the group of waiters and waitresses in restaurants working alternating or rotating shifts 437 waiters and 123 waitresses had shifts alternating from day to day. The hours are shorter, and the spread of hours less, in restaurants than in hotels. No restaurant waiter works over as long a stretch as 18 hours a day. As in hotels more than half the restaurant waitresses with alternating shifts have split shifts every day. The prevalent working day is one of 9 hours or less included within 13 hours or less.

There are other large groups of waiters and waitresses in hotels and considerable numbers in restaurants who work on shifts which change every day for a period of days or every week for a period of weeks. Examples of such shifts worked by waiters in hotels are shown in the chart on page 102.

In all the charts accompanying this article the number of employees represents the number on the pay roll during the period studied and not necessarily the number of full-time positions in the establishments. The first establishment shown on Chart A employs 39 waiters and arranges its hours to rotate weekly, each waiter working a six-day week on each shift. In the fourth establishment, which employs 16 men, shifts rotate daily through a seven-day week. No man necessarily works three consecutive days on the shift starting at noon and lasting until 1 a. m., but during each week he works three days on this shift. Although very long shifts are broken by an hour or less allowed for a meal, this break could not be indicated on the chart as the exact hours at which meals are served were not ascertained.

It will be noticed that all the waiters represented on this chart work on some days over stretches of at least 13 hours and that the work of several of them extends over much longer periods. In the next to the last establishment shown a waiter never works a straight shift. The fourth establishment, with 16 men working seven days a week, has the most severe arrangement of hours. Although these men are off at 2 in the afternoon on two days out of seven, the other five days they must work until 1 a. m. In a hotel like this with considerable after-theater business a waiter must often stay on popular nights until 2 o'clock or later to complete the service of guests. No matter how this schedule may be arranged there is one morning when the waiter has to be on duty no later than 8 o'clock following a night when he has been on duty until 1 o'clock. In other words, there are two

working days every week between which the waiter has no more than seven hours of rest at night. These men work $77\frac{1}{2}$ hours in a seven-day week.

Representative Arrangement of Shifts.

THE hours of waitresses in hotels are broken in a manner similar to those of the men, but their hours on duty are usually fewer, with longer rest periods at night. The following arrangement of hours found in a small hotel employing six waitresses, in shifts rotating as indicated, seems to involve the maximum of inconvenience for the employees. Each employee works—

Two days: 8 to 10 a. m., 12 m. to 2.30 p. m., 6 to 9 p. m., 9.30 to 12 p. m.

Two days: 12 m. to 5 p. m., 5.30 to 6 p. m.

One day: 8 to 10 a. m., 12 m. to 2.30 p. m., 9.30 to 12 p. m.

One day: 6 to 6.30 a. m., 7 to 11 a. m., 6 to 9 p. m., 10 to 12 p. m.

That it is possible to arrange the hours of waiters, even in large hotels, with more regard for the convenience and advantage of the employees, is shown by the successful experience of a large Pacific coast hotel employing about 150 waiters. The men work in shifts, changing weekly from one shift to another. For the week covered by the survey the schedule was arranged as follows:

- 7 worked from 10.30 a. m. to 2 p. m. and from 2.45 to 8.30 p. m.
- 7 worked from 11.45 a. m. to 2.15 p. m. and from 6 p. m. to 1 a. m.
- 10 worked from 12 m. to 2.30 p. m. and from 6 p. m. to 12.30 a. m.
- 2 worked from 11.30 a. m. to 8.30 p. m.
- 7 worked from 11.30 a. m. to 2 p. m. and from 2.45 to 6 p. m.
- 7 worked from 12 m. to 2 p. m. and from 5.45 to 9.45 p. m.
- 7 worked from 11.45 a. m. to 2.45 p. m. and from 5.30 to 6.30 p. m.

The last three shifts are known as three-quarter shifts; while on them the men receive three-fourths of their regular weekly wage.

The arrangement of hours, both for waiters and for waitresses, is usually better in restaurants than it is in hotels. Several instances of well-arranged systems were found. Thus a restaurant in the eastern part of the country having the heaviest part of its business at night, and employing 30 waiters, operated under the following schedule:

- 4 worked daily from 12 m. to 8 p. m.
- 1 worked daily from 7 a. m. to 3 p. m.
- 25 worked on alternate days { from 12 m. to 8 p. m. on one.
from 5.30 p. m. to 1 a. m. on the other.

The shortening of the late shift makes allowance for the frequent obligation of the waiters to remain later than 1 o'clock to complete the service of guests.

That it is possible to make satisfactory arrangements of hours of waitresses in restaurants may be further illustrated by the following examples. The first restaurant is in the East and employs 115 full-time waitresses; the second is in the West and has 18 waitresses on the pay roll. The arrangement of hours is as follows:

Restaurant A:

- 5 work from 6 a. m. to 3 p. m.
- 1 works from 7 a. m. to 3 p. m.
- 1 works from 8 a. m. to 5 p. m.
- 2 work alternating days from 7 a. m. to 3 p. m. and from 10.30 a. m. to 7.30 p. m.
- 28 work from 10.30 a. m. to 7.30 p. m.
- 42 work from 11 a. m. to 8 p. m.
- 7 work from 12 m. to 3 p. m. and from 5 to 8 p. m.
- 4 work from 11.30 a. m. to 3 p. m.
- 22 work from 12 m. to 3 p. m.
- 3 work from 5 p. m. to 8 p. m.

Restaurant B:

- 4 work from 6 a. m. to 2 p. m.
- 2 work from 7 a. m. to 3 p. m.
- 2 work from 8 a. m. to 2 p. m. and from 6 to 8 p. m.
- 1 works from 8 a. m. to 1.30 p. m. and from 5 to 7.30 p. m.
- 4 work from 12 m. to 8 p. m.
- 4 work from 4 p. m. to 12 p. m.
- 1 works from 5 p. m. to 1 a. m.

Cooks.

IN CONTRAST to the experience of waiters a large proportion of cooks work the same shifts every day. Of this group, consisting of 1,424 male hotel cooks, 1,195 male restaurant cooks, 73 female hotel cooks and 214 female restaurant cooks, about half work unbroken shifts. The remainder work split shifts, running approximately from 7 a. m. to 2 p. m. and 5 to 8 p. m. Among the men who work straight unbroken shifts, however, there is the widest variation in working conditions. Because a hotel or restaurant worker has a straight shift he does not necessarily have short hours. In Chart B are represented the hours of cooks in three restaurants having unbroken long shifts and in four having similar short shifts. The three restaurants in the first group are located in the South, Middle West, and East, respectively, while of the four in the second group two are in eastern cities and two on the Pacific coast. (See Chart B.)

Housekeeping and Service Departments.

ALARGE majority of employees in the housekeeping and service departments work seven days a week. Numerically the occupation of maid is the largest in the housekeeping department and the largest female occupation in the industry. Of approximately 4,000 maids included in the survey, 6 per cent work over 60 hours a week and 62 per cent work from 48 to 56 hours per week. Daily hours of work for maids are usually included between the hours of 6 a. m. and midnight. Regular work is all performed before 6 p. m., but evening maids are required to make up rooms vacated late in the day. About half the 4,000 maids are employed in hotels in which regular day maids work straight shifts broken only for lunch, and where the necessary night work is done by different groups. In these hotels the day shifts work from 7.30 or 8 a. m. to 4 or 5 p. m. and the night shifts from 4 or 5 p. m. to 11 p. m. or midnight. From one-half to one hour off is allowed for lunch or supper. The Sunday shift for about 900 of this group is shorter than the week-day shift by approximately two hours. The daily and weekly hours of all this group of maids are comparatively short, and are much easier than those of the other half of the maids included in the survey.

The 2,000 maids constituting this other half work straight, alternating, or rotating shifts, so arranged that each maid takes her turn at night work. About 700 of them work straight day shifts with the addition of a night watch every fifth to ninth day. This

¹ Straight night shift.² Entitled to 1 day off each week.³ Closed on Sunday.

long day may extend straight through from 8 in the morning to 11 at night with breaks only for meals, or it may extend approximately from 8 a. m. to 3 p. m. and from 6 to 11 p. m. Occasionally the night shift is on duty only until 7 or 8 o'clock. In many instances maids in this group have comparatively short shifts on

Sunday. Chart C gives ten examples of rotating shifts in as many hotels in different cities.

Maids who work over a long, unbroken stretch of hours are allowed an hour or less for one meal. As the exact hours at which meals are eaten were not reported, it was impossible to show breaks for meals on the chart. The frequency of night work varies; it is required 8 nights out of 13 in the first establishment, 2 nights out of 4 in the third, and only 1 night a week in the 2 establishments employing 82 and 79 maids, respectively. The women working on the extremely broken shifts in the first establishment are lodged in the hotel and can therefore retire to their own rooms during the short periods of time elapsing between shifts. On the other hand, the fact that they are lodged in the house enables the management to call on them for extra work when any employees are absent from duty or when the hotel is unusually busy.

The type of shift worked by maids is frequently the same for practically all hotels in the same city, although the actual hours on duty may vary considerably from establishment to establishment. In States in which there are no State laws regulating the hours of work for women, weekly hours for maids vary extremely in different hotels, and are apparently regulated in each case entirely by the management.

Practically all the 1,768 bellboys included in the survey work alternating long and short days of strikingly similar length throughout the country. A large majority of them work approximately 6 hours, from 12 m. to 6 p. m. on one day, and on alternate days have long hours divided between two shifts. The largest number work on this long day 12 and under 13 hours, completed in 18 and under 19 hours. Another large group works on the long day 11 and under 12 hours, distributed over 17 and under 18 hours, and a third group works 10 and under 11 hours, distributed over 16 and under 17 hours. These long day shifts extend approximately from 6 or 7 in the morning to noon and from 6 at night until 11 or midnight. In some establishments the hours on the long day vary in rotation. For example, in one hotel all bellboys begin their evening shift at 6 p. m. Each man remains on duty one night until 11 o'clock, the second night until 11.30, the third night until 12, and the fourth night until 12.30. The fifth night he leaves again at 11 o'clock.

Only 49 bellboys were found working unbroken shifts every day. Twenty-eight of these were in one establishment with shifts alternating weekly, the daily hours being from 6 a. m. to 3 p. m. during one week and from 3 p. m. to 1 a. m. during the next week. The night force of bellboys is usually composed of one or two men who

work from 11 p. m. to 7 a. m. and act as elevator men as well as bellboys. The usual full-time weekly hours of bellboys are between 56 and 63, spread over a 7-day week.

Of the 56 women listed as bellboys 37 work alternate long and short shifts similar to those of the men, but usually with somewhat shorter hours on the long day. All but four of the women work a six-day week. Their weekly hours are, therefore, much less than those of the men, 31 of them working only 42 hours a week. Their work is apparently specialized, and not exactly like that of the regular bellboys. It is evident, therefore, that women have not replaced men to any appreciable extent in this occupation.

Conclusion.

THE outstanding features of employment in the hotel and restaurant industry as revealed by this study of hours are the long hours of work, especially among men, as compared with most manufacturing industries; the numerous instances of split shifts spread over excessively long periods; and the extreme variation in the length of the week for employees in the same occupation, not only in different cities but also among different establishments in the same city, showing the great lack of standardization in the industry. Since some of the establishments scheduled, especially those in the Pacific coast and the eastern cities, have been able to inaugurate a six-day week with shorter daily hours and better wages, it seems reasonable to believe that better working conditions might be introduced quite generally in the industry.

Practice Regarding the Payment of Punitive Overtime Rates.

By LEIFUR MAGNUSSON.

Establishment of Overtime Rates by Legislation.

THE policies of the war labor administration undoubtedly caused considerable extension of the practice of paying punitive overtime rates. All war labor agencies, either directly or by implication, accepted trade-union practice in that respect. The War and the Navy Departments took a definite stand in the matter and ordered the payment of an extra overtime rate on all their construction work. General Order No. 13, November 15, 1917, issued originally by the Chief of Ordnance and repeated by the Quartermaster General, explained the theory of paying punitive overtime rates in these terms:

The theory under which we pay "time and a half" for overtime is a tacit recognition that it is usually unnecessary and always undesirable to have overtime. The excess payment is a penalty and intended to act as a deterrent. There is no industrial abuse which needs closer watching in time of war.

The law of the Federal Government limiting the hours of work on all public contracts to eight hours per day permits overtime only in cases of emergency. During the war the eight-hour day on Government shipbuilding, munition, and construction contracts was suspended because of the war emergency. The Executive order of March 22, 1917, one of several similar orders which suspended the eight-hour day on different kinds of Government work, provided "that the wages of persons employed upon such contracts shall be computed on a basic day rate of eight hours' work, with overtime rates to be paid for at not less than time and one-half for all hours worked in excess of eight hours."

Likewise during the war the Bureau of Engraving and Printing began working overtime and paying an extra rate of compensation for such work.

Previous to the exigencies in Government work created by the war the act of August 24, 1912, provided that beginning March 4, 1913, letter carriers in the city delivery service and clerks in first and second class post offices who in case of emergency were employed over eight hours per day should be compensated at the rate of time and a half. Section 5 of chapter 389 of the act reads as follows:

In cases of emergency, or if the needs of the service require, letter carriers in the city delivery service and clerks in first and second class post offices can be required to work in excess of eight hours a day, and for such additional services they shall be paid extra in proportion to their salaries as fixed by law.

State and territorial legislation in the United States has also dealt with the problem of extra compensation for overtime. Under the Administrative Code, 1917 (ch. 42, sec. 1656), the Bureau of Printing of the Philippine Islands is required to compensate overtime work at a rate of 20 per cent in excess of normal rates on regular workdays and of 100 per cent on holidays.

An act of 1917 of Porto Rico (Act No. 43, sec. 1) requires that the chief of the bureau of supplies, printing, and transportation shall pay employees of that bureau who are paid by the hour for all work on holidays and outside of regular office hours at the rate of 50 per cent above the regular rate.

Oregon is the only State in the Union which requires extra compensation for overtime where labor is employed by the State, county, school district, municipality, or other governmental division. Chapter 98 of the General Laws of Oregon, 1917, specifies that no person shall be required or permitted to labor more than 8 hours in any one day, or 48 hours in any one week, except in cases of necessity, emergency, or where public policy absolutely requires it, in which event the person or persons so employed shall receive double pay for such overtime; and no emergency, necessity, or public policy shall be presumed to exist when other labor of like skill and efficiency which has not been employed full time is available. This act does not apply to State institutions and departments. A law similar to the above is found in the legislation of the State of Washington (Codes and Statutes, sec. 6573), which is applicable on all public contracts.

The general 10-hour law of Oregon (Section 2, chapter 102, General Laws of Oregon, 1913), which fixes a 10-hour day in all manufacturing industries, directs that if, in an emergency, overtime is worked, the rate of payment therefor shall be 150 per cent of the regular rate.

The general practice under minimum-wage legislation in the States is to discourage and limit overtime as much as possible, and to allow it only where an emergency makes it necessary. In such cases provision is made for the payment of compensation for the overtime in the orders of the commissions or boards which are charged with the enforcement of the minimum-wage laws. This compensation is usually somewhat in excess of the normal rate of compensation. The Industrial Welfare Commission of Kansas has applied a rate of time and one-half for overtime work of women subject to its orders, while that of California fixes a rate of time and one-fourth.

Cognizance is taken of overtime in foreign labor legislation either by law or administrative order. In Austria, Ecuador, Finland, France, Poland, Portugal and Jago-Slavia punitive overtime rates are to be paid to persons coming within the scope of the general eight-

hour laws. Other countries having eight-hour laws require only the payment of pro rata overtime.¹ In Great Britain a bill before Parliament in 1919 specified that not less than time and one-quarter should be paid for overtime work.

The draft convention on the eight-hour day, recommended by the recent International Labor Conference at Washington which was convened under the League of Nations and consisted of representatives of Governments, employers, and workers from 40 nations, provided for the general introduction of an eight-hour day and suggested the placing of a limit upon the amount of overtime work and the payment of time and a quarter for such overtime.

In the voluntary agreements between employers and workers and in the binding awards of the arbitration courts or wages boards of Australia and New Zealand, all work in excess of 8 hours a day or 48 hours a week must be paid for at a higher rate of remuneration.

Overtime Rulings of the National War Labor Board.²

THE National War Labor Board did not follow an invariable rule in fixing the payment of overtime work, yet its decisions are fairly uniform. In 68 cases it decided that time and a half should be paid for all overtime and in 67 cases it directed the payment of double time on Sundays and holidays. In one instance, the board awarded double time for work on Saturday afternoons and for some work late at night by those employees who were not ordinarily night-shift men. In the Sloss-Sheffield Steel & Iron Co. case the joint chairmen as arbitrators awarded time and one-quarter for work between 8 and 10 hours and time and one-half for work over 10 hours, but in another case decided by them on the same day—that of the Corn Products Refining Co.—the overtime rate was fixed at time and one-half for work beyond 8 hours and double time for that beyond 12 hours.

In the rulings of the board the special nature of the industry frequently determined the question of the payment of overtime. Under a system of shift work where continuous operation is required, Sunday work was not considered as overtime. In the newsprint paper award the board decided that whenever four workers were required to work overtime for more than two weeks to fill a vacancy, overtime compensation should be paid at the rate of double time; but in case the employer was unable to fill such a vacancy, he could apply to the union, and if the union was unable to furnish the required

¹ For an analysis of the eight-hour laws in the foreign countries see pp. 184 to 198 of this number of the REVIEW.

² Analysis of awards of the National War Labor Board, by Robert P. Reeder. Appendix No. 2, Report of the Secretary of the National War Labor Board to the Secretary of Labor for the 12 months ending May 31, 1919, pp. 80 to 84, Washington, 1920.

men the employer could not be required to pay more than time and one-half for overtime work. Work at the change of shifts was not considered as overtime work.

Railroad work was treated specially in regard to payment of overtime and train crews were given nine-hour days without higher rate for overtime although the basic day was eight hours. The ruling of the board in this matter was as follows:

The working hours for train crews shall be 9 hours per day. Should their work be completed at any time between the last half-hour point and the full 9 hours' working time, the crew shall have the privilege of going home. Should the crew be required to remain 30 minutes or less beyond the end of their ninth working hour to complete the work, no extra time shall be granted, but in case more than 30 minutes in excess of 9 hours are required to do the work overtime shall be granted at the flat hour basis. The superintendent, or his representative, shall be the judge as to when the work for the day is completed. Where it is necessary to operate the railroad for 24 hours daily, the regular 8-hour shifts shall be in operation.

In three cases the War Labor Board awarded the payment of overtime rates for time spent in traveling after the regular hours.

In calculating the overtime rate for piecework the board decided that the piece and not the day rate is to be used as the basis if that course is feasible. In only two cases before the board was this matter involved, these being the General Electric Co. case (Docket No. 127) and the Bethlehem Steel Co. case (Docket No. 22). In those awards which establish the 48-hour week as a basis of work, the board went on record to discourage excessive overtime work and directed "that where in 1 day more than 2 hours' overtime in excess of 8 hours is required, then, for that day, overtime shall be paid without regard as to whether or not the worker shall, during that week, have worked the weekly schedule provided for." This view was taken in nine cases.

Overtime in Certain Organized Trades.

THE union wage scale studies of the United States Bureau of Labor Statistics indicate the general prevalence of the practice of paying extra compensation for overtime in the principal organized trades in the United States. The following trades are included in the latest union wage scale study of the Bureau:¹

Bakery trades.	Metal trades.
Building trades.	Millwork trades.
Chauffeurs, teamsters, and drivers.	Printing and publishing, book and job.
Freight handlers.	Printing and publishing, newspaper.
Granite and stone trades.	Theatrical employees.
Laundry trades.	Waiters.

¹ Bulletin No. 259, Union scale of wages and hours of labor, May 15, 1918.

The standards as to overtime set up in the trades mentioned are, as a rule, followed by the unorganized as well as the organized workers. The Bureau studies in question covered the principal cities of the country and these are generally the largest in their respective sections of the country. Within the cities in question there are found more than one-third of the total number of persons engaged in gainful occupations, not including those in agricultural pursuits.

Overtime in Certain Basic Industries.

THE practice of paying punitive overtime rates is common in the largest basic industries of the country, among which may be mentioned the steel, slaughtering and meat-packing, and shipbuilding industries, longshore work, and the merchant marine.

Iron and steel industry.—In placing its employees on the basic 8-hour day, effective October 1, 1918, the United States Steel Corporation announced that time and one-half would be paid for all overtime beyond the eight hours.¹ Both mines and industrial establishments of the corporation were affected. Iron and steel employees proper work in two shifts; and mechanics work 10 hours. The order of the corporation directly affected over 250,000 workers.

Packing industry.—By an award in May, 1918, Judge Samuel Alschuler, the administrator for the Government in the arbitration of the packing industry disputes, introduced for the first time the principle of payment for overtime in that industry. The rate fixed was time and one-quarter for the first two hours over eight per day and time and one-half for all work after that. This award affected approximately 100,000 employees in the slaughtering and meat-packing industry of the United States. In discussing the question of compensation for Sundays and holidays and week-day overtime, Judge Alschuler used the following language:

As to the fairness of the demand for a higher rate of compensation for Sundays, holidays, and week-day overtime there was no controversy at the hearing, but it was frankly conceded by such of the packers who testified, and by all of the superintendents. In testifying before the United States Commission on Industrial Relations about three years ago Mr. O'Hern, referring to the result of overtime work, said, "We do not get the results in overtime nor do we have men working as efficiently." While presumably he was referring to overtime beyond 10 hours, it would of course have application to the true economic day's work whatever it may be, and it is likewise true that if the overtime beyond the economic day's work is continued on successive days for any considerable time, the impaired results of the labor, and the inefficiency of the laborer would not be limited to the overtime itself, but be reflected in the entire day's work as well. The higher rate serves to deter employers from unnecessarily requiring employees to work at such times; but if such work is necessary it serves also to compensate the employee for the added sacrifice he makes in so working at times when he should have his liberty.

¹ MONTHLY LABOR REVIEW, November, 1918, p. 133.

² Idem, May, 1918, pp. 115-127.

As to the particular holidays there was some contrariety of view, and likewise as to the amount of the extra pay for Sundays and holidays. It is my judgment that double time should be allowed for work on Sundays, and on the following holidays: New Year's Day, Memorial Day, Independence Day, Labor Day, Thanksgiving Day, and Christmas Day. Where any operation is continuous in three 8-hour shifts, I do not believe extra pay for Sunday should be allowed if provision is made for relieving the employee from work on some other day of the week.

As to overtime pay for week days, the employers, while conceding the general fairness of the principle, contend that the overtime should be allowed for the excess of hours served in the week. That is, if the basic day were 10 hours, excess time should be allowed only if in the week over 60 hours were served. This system is in vogue in many industries, but I do not think it tends so well to serve the purpose of minimizing the daily hours, or rather of equalizing them from day to day, as would the daily application of the principle. If with the eight-hour day the employers may with immunity work the employees 16 hours daily for three days of the week, and not at all for the others, they might regulate their stock purchases and holdings accordingly, whereas if the added pay for overtime applied to the days, they would be more likely to make effort to conform to the eight-hour day, as it would probably be more to their advantage to carry over some of the stock for another day or two than to pay the added rate for overtime.

The most usual and customary rate for week-day overtime is time and one-half, and as to such time served beyond 10 hours I have no hesitancy in fixing that rate. I am convinced, however, that for a very considerable time after the basic eight-hour day becomes effective, at least until employers and employees have become adjusted to the new conditions, it will from time to time be necessary to serve some overtime. In view of this fact I do not believe it would be fair, at least until long enough after the basic eight-hour workday becomes effective to determine more definitely from experience in this industry, to impose on the first two hours so large a penalty as for the excess over 10 hours; and I have accordingly concluded that on and after next May 5 for the first two hours of week-day overtime the rate of compensation shall be time and one-fourth.

As to the week-day overtime rate for the time intervening between January 14, 1918 (on and after which date the said arbitration agreement is by its terms effective), until said May 5, when the basic eight-hour day becomes operative, week-day time in excess of 10 hours daily shall be compensated at the rate of time and one-half and Sundays double time.

Shipbuilding.—In accordance with a series of decisions commencing in March, 1918, the Shipbuilding Labor Adjustment Board fixed the standard of an eight-hour workday with overtime rates for hours in excess thereof. On October 1, 1918, these decisions governing working conditions in the shipyards were harmonized in two decisions, one applicable to Pacific coast yards and the other to the Atlantic coast, Gulf coast, and Great Lakes shipyards. The general overtime rate in the industry is time and one-half.

The number of employees in the shipyards of the United States under control of the Emergency Fleet Corporation, which would include practically all the yards, was 289,594 on June 30, 1919. The maximum number employed is represented by the figures for November, 1918—that is, 336,000.

The terms of the award of March 7, 1918, governing working conditions in the shipyards of the Newport News Shipbuilding & Dry Dock Co., may be cited as typical respecting the matter of overtime. The overtime rate is time and one-half on regular week days and double time on holidays. Employees engaged on certain kinds of repair work also receive double time on week days. The terms of the award respecting overtime are as follows:

(2) Work in excess of these periods on any week day shall be counted as overtime and paid for at the rate of time and one-half.

(3) Work in excess of 60 hours a week for any employee shall not be permitted, except on repair work, or when ordered by the Navy Department or the Emergency Fleet Corporation, or to protect life or property from imminent danger.

(4) Work on Sundays and the following holidays shall be paid for at the rate of double time: New Year's Day, Washington's Birthday, Decoration Day or Memorial Day, Fourth of July, Labor Day, Thanksgiving Day, and Christmas Day.

(5) Men employed on the night shift shall receive compensation 5 per cent higher than is paid to those employed on the day shift.

(6) Employees engaged on repair work in or upon vessels undergoing repair shall receive double time for all overtime on week days as defined above, as well as on Sundays and the specified holidays.

Our purpose in limiting overtime by the above 60-hours-a-week regulation is to discourage a resort to excessive overtime, which leads to inefficiency and tends to lessen rather than to increase production, and to encourage the introduction of the two and three shift systems. The feasibility of working two or three eight-hour shifts in shipbuilding plants has been conclusively demonstrated, and we urge the Newport News Shipbuilding & Dry Dock Co. to take immediate steps looking toward the introduction of additional shifts in their yards.

American merchant marine.—By virtue of union agreements and subsequent confirmation by the United States Shipping Board, payment for overtime exists as a general practice in the United States merchant marine. Approximately 270,000 persons are engaged in the merchant marine of the United States.¹

The rules respecting overtime provide for a special flat rate of compensation per hour, inasmuch as those engaged in the marine occupations are paid the regular compensation on a monthly basis. The principle respecting the payment of overtime is the same for the Atlantic coast as for the Pacific coast.

It may be noted in this connection that overtime rates are paid, for instance, in the merchant marines of Sweden and Italy as shown by recent laws enacted by those countries regarding the merchant-marine service.²

Longshoremen.—An examination of the various agreements in the longshore industry for the port of New York since 1912 shows the existence of the practice of paying an extra rate of compensation for

¹ Report of the Director of Marine and Dock Industrial Relations Division, U. S. Shipping Board, Dec-31, 1918, pp. 67, 68.

² MONTHLY LABOR REVIEW, December, 1919, p. 259; January, 1920, pp. 158-173.

Sunday and holiday work. Likewise the recent awards of the National Adjustment Commission direct the payment of punitive overtime rates in the principal lake and sea ports of the country.

The estimates of the number of longshoremen in American ports range from 100,000 to 150,000.

Railroad service.—The Adamson Act of September 3, 1916, established a basic eight-hour day for employees of carriers engaged in interstate and foreign commerce. While overtime is not forbidden under the act and may extend up to the limitations prescribed by the 16-hour law, work in excess of eight hours must be paid for at a rate not less than the pro rata of the standard eight-hour day. This act affected approximately 400,000 railroad employees in the operating branch of the service.

Various orders respecting rates of pay and hours of work of railroad employees have been issued by the Railroad Administration. The latest order issued is Supplement No. 25 to General Order No. 27, effective December 1, 1919. This order provides in practice for an overtime rate of time and a half in the freight service, thus bringing about a radical modification in payment for overtime work on railroads. The section of the order having to do with the basic day and overtime rates is as follows:

(a) In all road service, except passenger service, 100 miles or less, eight hours or less (straightaway or turnaround) shall constitute a day's work. Miles in excess of 100 will be paid for at the mileage rates provided.

(b) On runs of 100 miles or less overtime will begin at the expiration of eight hours; on runs of over 100 miles overtime will begin when the time on duty exceeds the miles run divided by $12\frac{1}{2}$. Overtime shall be paid for on the minute basis, at a rate per hour of three-sixteenths of the daily rate.

(c) Road conductors and trainmen performing more than one class of road service in a day or trip will be paid for the entire service at the highest rate applicable to any class of service performed. The overtime basis for the rate paid will apply for the entire trip.

The recent agreement between the Railroad Administration and the railway employees department of the American Federation of Labor, comprising the various crafts in occupations allied to railroading, that is, the machinists, boiler makers, blacksmiths, sheet-metal workers, electrical workers, and carmen, under date of September 20, 1919, provides as follows, respecting overtime:

All overtime, except as the provisions of rules 7, 9, 10, and 15 apply, outside of bulletin hours, up to and including the sixteenth hour of service in any one 24-hour period, computed from the starting time of the employee's regular shift, shall be paid for at the rate of time and one-half and thereafter at the rate of double time, up to the starting time of the employee's regular shift.

This to include work performed on Sundays, New Year's Day, Washington's Birthday, Decoration Day, Fourth of July, Labor Day, Thanksgiving Day, Christmas, and such State holidays as are now recognized as punitive overtime days at the various points on the respective railroads within the different States.

Likewise the agreement between the Railroad Administration and the maintenance-of-way employees and railway shop laborers, effective December 16, 1919, provides for overtime at time and a half for all work over eight hours. A typical provision of the agreement—there are certain limitations and restrictions—is as follows:

Overtime for laborers in extra or floating gangs whose employment is seasonal and temporary in character, when engaged in work not customarily done by regular section gangs, such as ballasting and rail laying, including the tie renewals incident thereto, and ditching or in improvement work such as bank widening, grade and line changes, riprapping and similar work, shall be computed for the ninth and tenth hour of continuous service, exclusive of the meal period, pro rata, on the actual minute basis and thereafter at the rate of time and one-half time. Such extra or floating gangs will not be used to displace regular section gangs.

Overtime for regular section laborers and other employees except those covered in sections (a-7) and (a-12) of this article shall be computed after the eighth hour of continuous service, exclusive of the meal period, on the actual minute basis at the rate of time and one-half time.

Garment industry.—Time and a half for overtime is the prevailing practice in the garment industry of the United States. The number employed in this industry ranges, as estimated, from 125,000 to 150,000. The provisions of the agreements in the cloak, suit, and skirt industry of New York City signed, respectively, in May and June of last year and effective until June, 1922, may be cited as an example for the industry.¹

All operators, finishers, and piece tailors shall be paid at the rate of time and one-half for overtime. All other classes of workers for whom the last agreement provided that double time shall be paid for overtime shall receive that rate under this agreement.

Coal mining.—The payment of extra compensation for overtime is not in practice in the coal-mining industry of the United States. The anthracite agreements provide merely for a pro rata overtime. The only information which the Bureau has concerning the payment of overtime has reference to Germany's mining industry, in which the practice is to pay double time for Sundays and a less rate for week-day overtime. In Saxony, for instance, the overtime rate is time and one-quarter for work on regular days.²

Obviously there are industries and occupations other than those considered above in which the practice of paying a higher rate than normal for overtime work is quite generally observed either through the industry as a whole or in certain districts or markets. Thus the lumber industry in the Northwest States, affecting probably 50,000 workers, began the practice during the war. This survey of the extent to which punitive overtime is paid in American industry has merely sought to bring together the more important examples such as could be more readily discovered.

Recent Railroad Wage Award in Queensland, Australia.

THE Queensland Industrial Gazette for November, 1919, publishes the text of an award made by the court of arbitration governing the wages and hours of labor of railroad employees in that State. The terms of the award, effective as to wages on July 1, 1919, and as to hours on November 1, 1919, are here presented for a few of the most important occupations. The wages, shown in English currency,¹ differ in the three divisions into which the State is divided.

The figures given for clerks and telegraphers apply to persons 21 years of age and over. The table shows the minimum salary established for each occupation. This minimum is to be increased by not less than £10 after two years, and by not less than £10 each year thereafter until the total increase amounts to £40. In the interest of efficiency the commissioner of railways may increase a salary to £235, £245, or £260, in the respective divisions. The hours shall be 6 $\frac{3}{4}$ Monday to Friday, inclusive, and 3 on Saturday, making a total of 36 $\frac{3}{4}$ hours per week. Overtime shall be paid for at time and a half. This group does not include typists, switchboard attendants, or comptometer operators.

The duties of car conductors are to examine and collect tickets, to assist guards in taking on and discharging passengers, and to cleaning and preparing their own cars. The basic hours in this occupation are 48 per week, with overtime paid for at time and a half. Guards are the men in charge of trains. Their basic hours are 8 per day. Overtime is paid for at time and a half, and after 12 hours at double time.

The basic hours and the provision for overtime for engine (locomotive) drivers and firemen are the same as for guards.

¹ Owing to fluctuations in the rate of exchange, conversions are not made into United States money. Normally the value of the pound sterling is \$4.8665, of the shilling, 24.3 cents, and of the penny, 2.03 cents.

WAGES PER HOUR OF RAILROAD EMPLOYEES IN QUEENSLAND, AUSTRALIA, BY

Changes in Wages and Hours in Certain Industries in France, March to August, 1919.

THE administrative councils of various French Departments have adopted scales of wages in reconstruction and similar work done on the public account, according to an article in a special issue of the Bulletin of the Ministry of Labor.¹ Wages vary according to occupation and local conditions, and districts are designated as "devastated" and "nondevastated." Higher wages obtain in the former. Such scales have been published for the Departments of Marne, Meurthe-et-Moselle, Meuse, Ain, and the Seine, and in addition for the military establishment (artillery) at Toulouse.

¹ Bulletin du Ministère du Travail, Paris, June-July-August, 1919, pp. 293-310.

The following is the scale for public excavation and construction work adopted by the Department of Marne July 30, 1919, eight hours to constitute a day's work:¹

SCALE OF WAGES ON PUBLIC WORKS IN DEVASTATED AND NONDEVASTATED DISTRICTS OF THE DEPARTMENT OF MARNE JULY 1, 1919, BY OCCUPATION.

District and occupation.	With board and lodging.		Without board and lodging.	
	Per day.	Per hour.	Per day.	Per hour.
<i>Devastated districts:</i>	<i>Francs.</i>	<i>Francs.</i>	<i>Francs.</i>	<i>Francs.</i>
Adult laborers.....	13.60	1.70	15.60	1.95
Diggers and carters.....	15.60	1.95	17.60	2.20
Skilled laborers.....	17.60	2.20	19.60	2.45
Skilled general mechanics.....	19.60	2.45	21.60	2.70
<i>Nondevastated districts:</i>				
Adult laborers.....	12.60	1.575	14.60	1.825
Diggers and carters.....	14.60	1.825	16.60	2.075
Skilled laborers.....	16.60	2.075	18.60	2.325
Skilled general mechanics.....	18.60	2.325	20.60	2.575

Persons under 16 years of age are paid one-half and those between 16 and 18, 70 per cent of these wages. Normal wages are paid for overtime not to exceed two hours per day.

The Department of Meurthe-et-Moselle, on July 20, 1919, to help meet the increased cost of living, increased the cost-of-living bonuses already in force, which ranged from 2.75 to 4 francs per day, by the addition of from 0.25 franc to 1 franc. Women were granted an increase of 0.50 franc, young persons 0.25 franc, and women who are heads of families an increase of 0.75 franc. It is understood that these wages were to remain unchanged until January 1, 1920; but whenever any change in cost of living is greater than 15 per cent of that of July 15, 1919, the scale shall be revised upon demand of either the employer or employees.

In the Department of Meuse the following scale was adopted for public work either directly under public authorities or under contractors. It was to remain in force for at least three months from August 1, 1919.

HOURLY WAGES ON PUBLIC WORKS IN THE DEPARTMENT OF MEUSE, EFFECTIVE AUGUST 1, 1919, BY OCCUPATION.

Occupation.	Devastated districts.	Non-devastated districts.
	<i>Francs.</i>	<i>Francs.</i>
Ordinary laborers.....	1.30	1.00
Carters.....	1.55	1.20
Glaziers, painters, paper hangers.....	1.80	1.40
Excavators.....	1.95	1.50
Carpenters, locksmiths, tinsmiths, zinc workers, plumbers, roofers, marble cutters, chimney builders.....	1.95	1.50
Plasterers.....	2.00	1.55
Stonecutters, cabinetmakers, marble-cutters.....	2.10	1.60
Asphalt layers.....	2.15	1.65
Miners, quarrymen, road builders, masons, cement workers, bricklayers, brick pavers, pavers.....	2.20	1.70
Sewer builders, stone layers, joiners.....	2.35	1.80
Masons, rough coating.....	2.45	1.90
Blacksmith, warehouse.....	2.60	2.00

¹ Owing to fluctuations in the value of the franc, conversions are not made in this article into United States money. Normally, the par value of the franc is 19.3 cents.

In addition to wages, a cost-of-living bonus in either district of 4 francs per day was allowed. An allowance of 3 francs was granted to workmen employed at a distance exceeding 6 kilometers (3.7 miles) from their homes, unless lodged by the contractor, and of 1.5 francs to those living at a distance of more than 6 kilometers who return home at night.

Rates per hour fixed on June 20, 1919, in the city of Bourg in the Department of Ain, are as follows: Sawyers, helpers, skilled, 1.10 francs; masons, 1.25 francs; coppersmiths, locksmiths, chimney builders, and sawyers, 1.30 francs; joiners, wall painters, 1.40 francs; stonecutters, 1.50 francs; masons, tinsmiths, tilers, 1.55 francs; and carpenters, 1.60 francs.

The following scale was established on March 29, 1919, for the military establishment (artillery) at Toulouse:

SCALE OF WAGES IN FORCE AT THE MILITARY ESTABLISHMENT AT TOULOUSE,
EFFECTIVE MARCH 29, 1919.

Occupation.	Weekly wages.	
	Minimum.	Maximum.
Metal working:	<i>Francs.</i>	<i>Francs.</i>
Millwright, turner, hand blacksmith.....	52.50	66.00
Millwright, turner, pattern tracer, fitter, reamer, blacksmith.....	48.00	60.00
Driller, planer, mortiser, and similar occupations.....	43.50	57.00
Sheet-iron worker, zinc plumber.....	45.00	57.00
Coppersmith, and pattern tracer on tin.....	51.00	63.00
Sheet-iron and copper worker, tinsmith.....	45.00	57.00
Welder.....	45.00	57.00
Melter and molder, brass and bronze, handwork.....	43.50	57.00
Melter, brass.....	52.50	66.00
Woodworking:		
Pattern maker, finisher.....	51.00	63.00
Lathe man, turner, sawyer.....	51.00	63.00
Saw sharpener.....	45.00	57.00
Sawyer, mortiser, planer, machinemén.....	43.50	57.00
Joiners—1st class.....	48.00	60.00
2d class.....	45.00	57.00
Carpenter.....	51.00	60.00
Wheelwright, cooper.....	45.00	57.00
Building trades:		
Mason.....	42.00	51.00
Structural-iron worker, plasterer, wall painter, roofer, chimney builder.....	43.50	57.00
Mason, cement worker, chimney builder, industrial.....	48.00	60.00
Electrical machines:		
Electrician, motor power men, armature winder.....	52.50	66.00
Electrician, ordinary, machinemén.....	45.00	57.00
Engineer, fireman, machine tenders.....	43.50	57.00
Other trades:		
Harness maker.....	43.50	57.00
Saddle maker.....	48.00	60.00
Miscellaneous:		
Digger.....	46.80	54.00
Chauffeur, coachman, driver, groom.....	39.00	51.00
Assistant warehouseman, watchman.....	46.80	54.00
Warehouseman, principal.....	51.00	60.00
Gardener, chief; roadbuilder, chief; baggageman.....	48.00	60.00
Superintendent of infirmary.....	48.00	72.00
Helper, infirmary.....	39.00	48.00
Messenger, orderly, yard watchman.....	43.20	51.00
Nursery guardian (<i>de crèche et de garderie</i>).....	42.00	51.00
Orderly, under 18 years of age.....	21.00	42.00
Chemist, assistant.....	54.00	84.00
Laborer, male or female, skilled.....	45.00	51.00
Laborer, male or female, unskilled.....	42.00	48.00
Women doing manual labor in workshops heretofore done by men.....	40.20	45.60
Laundry employees, females.....	36.00	45.60
Garment makers, females.....	31.80	39.00

All these workers, except those classified as "Miscellaneous," when employed by the hour, receive 25 per cent more than normal wages.

In the Department of the Seine committees of employers and employees on July 2, 1919, adopted a scale for an eight-hour day in building and construction trades as follows: Journeyman plumber, zinc roofer, and gas fitter, 20 francs; helper, 14 francs; and street guard, 10 francs per day. In metal construction: Pattern maker and shift foreman, blacksmith, 2.75 francs; hammersmith, 2.15 francs; fitter, locksmith, ironworker, driller, stamper and chipper, riveter, general smith, bellhanger, metal-stairway builder, 2.50 francs; and unskilled laborer, 2 francs per hour. Woodworkers: Carpenter, stair-builder, 2.50 francs per hour.

Collective Agreements Regulating Wages and Hours.

THE Master Printers' Union of France, the French Federation of Bookworkers, and the National Federation of Lithographers, represented by their respective accredited committees, acting under the law of April 23, 1919 (8-hour law), entered into an agreement as of June 11, 1919. The following provisions are selected as the most important ones: Work shall begin and end at a given signal; eight hours shall constitute a day's work; the division of the week's work shall provide for either 45 or 44 hours of work for the first five days and 3 or 4 hours on Saturday; in phototype and similar establishments no arrangement calling for over 9 hours in any one day shall be established.

Until January 1, 1920, certain exceptions were permissible, but overtime shall not exceed two hours per day.

Permanent exceptions in the employment of shopmen, overseers, those doing preparatory and preliminary work, laborers, delivery men, drivers, shop and machine cleaners, etc., are allowable, provided the hours of overtime do not extend beyond two hours of the regular working time of the establishment. Temporary exceptions are allowed in special cases, such as: (1) Seasonal or extraordinary amount of work; (a) 120 hours per year, with a maximum of two hours' overtime per day, (b) 15 Sundays per year; and (2) In national need or in case of actual or imminent accident.

The agreement is valid until January 1, 1922, and unless notice is given by October 1, 1921, it is to remain in force for one year longer.

Regular working hours are between 7 a.m. and 7 p.m. Work between 7 p.m. and 7 a.m. is paid for at 25 per cent above regular wages. However, if the work during the night hours is overtime it is paid for as follows: First two hours, 33 per cent; the following two hours, 50 per cent; and further extra hours, 100 per cent above regular wages. Sunday and holiday work, to 12 noon, is paid for at 50 per cent, and after 12 noon, 100 per cent above regular wages.

Petroleum refineries and warehouses.—An agreement was entered into June 16, 1919, between the national association of employers in the petroleum industry and the General Federation of Workers in Chemical Products. This agreement provides for an 8-hour day or a 48-hour week. Time for computing hours of labor begins as soon as the employee enters the building, and work ceases 10 minutes before the clock strikes the quitting hour. Certain classes of employees are excepted: Overseers, foremen, distillers, watchmen, and delivery men.

Overtime work is paid for at 1.65 per cent of regular wages, and is limited to 100 hours per year.

Agriculture.—An agreement covering the district of Melun, between the employers' association and the agricultural workers' unions, was entered into August 8, 1919. In addition to the minimum wages established an employee is entitled to a garden of five ares (598 square yards) cultivated and fertilized at the expense of the employer, or in default of that, to a compensation of 100 francs.

Wages for general laborers employed at all kinds of work are 10 francs per day; for employees under monthly contracts—drivers and carters—not boarded and lodged, 300 francs per month, and garden; boarded and lodged, 160 francs per month. Wages for other workers are as follows:

Man and wife, farm family (*Ménage de ferme*), 250 francs per month, board and lodging; farm maid, 90 francs per month, board and lodging; women engaged in light work, 0.60 franc per hour; and women engaged in threshing and distilling, 0.75 franc per hour. When performing work equal with men's, women shall receive wages equal to men's.

Overseers, 350 francs per month without board and lodging, or 200 francs with board and lodging.

Shepherds, 350 francs per month without board and lodging, and the shepherd to provide food for his dogs. When the employer boards and lodges the shepherd and provides food for his dogs, wages are reduced to 160 francs.

Tractor operators, 400 francs per month, without board and lodging.

Threshing machine hands, 12 francs per day.

Distillery men, 360 francs per month, minimum—increased wages for higher grades of work.

Those engaged in harvesting are paid twice the usual rate. Men employed at other work on the farm receive 400 francs per month plus a bonus of 50 francs during harvest, and day laborers are paid 16 francs per day. In job work wages are based on general hourly earnings.

The working day of from 5 a.m. to 7 p.m. is abolished, except during harvest, and the regulations issued by the public authorities are to be observed. A weekly day of rest, with other social laws relating

to agriculture, are to be vigorously enforced. Lodging employees in unhealthful quarters is prohibited.

Wages of persons not able to perform a normal day's work are to be determined by the arbitration commission, which shall also see that work beyond their physical strength is not required of such employees. Foreign laborers work under the same conditions as native laborers and are paid the same wages.

A mixed arbitration commission, composed of from three to five members of the district union, is charged with the supervision of this agreement. In case of threatened dispute the commission shall advise with the employer.

This agreement remains in force until June 1, 1920, and in default of notice of its termination, for one year longer. Notice of desired changes shall be filed two months before the expiration of the agreement. No person shall be discharged because of strikes or questions of unionism.

Other agreements.—Agreements have been entered into covering the rubber industry of the Paris district; the boot and shoe industries of Marseille, and undergarment making in Paris. These provide for the putting into operation of the eight-hour law, minimum wages, etc.

Increased Wages for Textile Workers at Lyon, France.

ACCORDING to a report from the American consul at Lyon, France, the strike of textile workers which was called on October 27, 1919, was ended on October 31 by the signing of a new wage agreement. The employers had agreed to a wage advance but stated that they could not guarantee a minimum daily wage without the guaranty of a minimum production. The discussion turned principally on the minimum salary to be guaranteed the workers, reports the consul, and the question was finally submitted to the mayor of Lyon for arbitration. He suggested that in case the mean production established by common consent was not reached "for reasons for which the laborers were not responsible, the minimum price of a day's work should be due just the same. If there is a difference of opinion on this point the difference should be submitted to a mixed arbitration commission." Following this arbitration, which closed the strike of Lyon spinners, the following convention was signed:

1. A study shall be made in each factory as to rates of wages for all articles now being manufactured, or possible of future manufacture, which shall assure a workwoman of average ability and efficiency the following daily earnings: ¹

¹ Owing to fluctuations in the value of the franc, conversions into United States money are not made. Normally the par value of the franc is 19.3 cents.

Daily earnings of textile workers in Lyon, France, under agreement of Oct. 31, 1919.
